

## **BNSF Railway Safety Vision**

We believe every accident or injury is preventable. Our vision is that BNSF Railway will operate free of accidents and injuries. BNSF Railway will achieve this vision through:

**A culture** that makes safety our highest priority and provides continuous self-examination as to the effectiveness of our safety process and performance...

**A work environment**, including the resources and tools, that is safe and accident-free where all known hazards will be eliminated or safe-guarded...

**Work practices and training** for all employees that make safety essential to the tasks we perform...

**An empowered work force**, including all employees, that takes responsibility for personal safety, the safety of fellow employees, and the communities in which we serve.

## **Mechanical Safety Rules**

In Effect at 0001  
Central, Mountain and Pacific  
Continental Time  
**January 1, 2015**

## Table of Contents

<b>S-1.0 Core Safety Rules.....</b>	<b>9</b>		
S-1.1 Job Safety Briefing.....	9		
S-1.2 Rights and Responsibilities.....	10		
S-1.2.1 Sufficient Time.....	10		
S-1.2.2 Authorized and Trained.....	10		
S-1.2.3 Alert and Attentive.....	10		
S-1.2.4 Co-Workers Warned.....	10		
S-1.2.5 Safety Rules, Mandates, Instructions, Training Practices and Policies.....	10		
S-1.2.6 Warning Signs.....	10		
S-1.2.7 Two or More People.....	10		
S-1.2.8 Reporting.....	10		
S-1.2.9 Horseplay.....	10		
S-1.2.10 “Bill of Rights” Relative to Employees Riding in Transport Vehicles.....	11		
S-1.2.11 Medical Conditions.....	12		
S-1.2.12 Medical Examinations.....	12		
S-1.2.13 Conflict of Interest.....	12		
S-1.2.14 Mandatory Stretching Before Work..	12		
S-1.2.15 Good Faith Challenge.....	13		
S-1.4 Tools and Equipment.....	14		
S-1.4.1 Inspection.....	14		
S-1.4.2 Use as Intended.....	14		
S-1.4.3 Manufacturer Specifications.....	14		
S-1.4.4 Manufacturer Approval.....	14		
S-1.4.5 On or Off Moving Equipment.....	14		
S-1.4.6 Three-Point Contact.....	14		
S-1.5 Work Environment.....	14		
S-1.5.1 Housekeeping.....	14		
S-1.5.2 Inspection.....	15		
S-1.5.3 Footing.....	15		
S-1.5.4 Confined Spaces.....	15		
S-1.5.5 Hazardous Materials.....	15		
S-1.5.6 Smoking.....	15		
S-1.5.7 Sexual Harassment.....	15		
S-1.5.8 Retaliation.....	16		
S-1.6 Working On or About Tracks.....	16		
S-1.6.1 Movement of Equipment.....	16		
S-1.6.2 Employees Fouling the Track.....	16		
<b>S-2.0 Chemical Safety.....</b>	<b>17</b>		
S-2.1 Environmental Safety.....	17		
S-2.2 Chemical Spills and Chemical Releases to Air..	17		
S-2.3 Labeling Chemical Containers.....	17		
S-2.4 Ventilation for Maintaining Safe Atmospheres....	17		
S-2.5 Skin Cleaning.....	17		
S-2.6 Containment and Spill Prevention.....	18		
S-2.7 Protection from Lead Exposure.....	18		
S-2.8 Protection from Asbestos Exposure.....	18		
S-2.8.1 Repair and Maintenance.....	18		
S-2.8.2 Training.....	18		
S-2.10 Protection from Silica-Containing Dust.....	18		
S-2.11 Chemical Approval.....	18		
S-2.12 Biohazard Safety.....	18		
<b>S-3.0 Electrical Safety.....</b>	<b>19</b>		
S-3.1 Requirements.....	19		
S-3.1.1 General.....	19		
S-3.1.2 Authorized Employees.....	19		
S-3.1.3 Warning Signs.....	19		
S-3.1.4 Flashlights.....	19		
S-3.1.5 Contacts.....	19		
S-3.1.6 Lockout/Tagout.....	19		
S-3.3 Charging and Jumping Batteries.....	19		
S-3.3.1 Precautions for Servicing Batteries..	19		
S-3.3.2 Battery Flushing.....	20		
S-3.3.4 Metallic Objects.....	20		
S-3.3.5 Jumping Batteries.....	20		
S-3.4 Passenger and Business Cars.....	20		
S-3.4.1 Connecting and Disconnecting 480 Volt Connections.....	20		
<b>S-5.0 Fire Prevention, Response, and Hazards.....</b>	<b>21</b>		
S-5.1 General Requirements.....	21		
S-5.2 Emergency Procedures.....	21		
S-5.2.1 Locomotive Fires.....	21		
S-5.2.2 Right of Way Fires.....	21		
S-5.3 Fire Extinguishers and Protection Devices.....	21		
S-5.3.1 Defective Fire Extinguishers.....	21		
S-5.3.2 Access to Fire Extinguishers and Protection Devices.....	21		
S-5.3.3 Use of Gasoline/Oil-Burning Devices.....	21		
S-5.3.4 Open Flames.....	21		
S-5.4 Starting Fires.....	21		
S-5.5 Fueling Vehicles, Machinery and Equipment....	22		
S-5.6 Electrical Circuits.....	22		
S-5.7 Hazardous Material Storage and Dispensing....	22		
S-5.7.1 Storing Chemicals.....	22		
S-5.7.2 Grounding.....	22		
S-5.8 Use and Handling of Liquefied Petroleum Gas (LPG).....	22		
S-5.8.1 Testing.....	22		
S-5.8.2 Avoiding Extreme Heat.....	22		
S-5.8.3 Handling Leaks.....	22		
S-5.8.4 Refueling LPG Tanks.....	23		
S-5.8.5 Closing Valves.....	23		
S-5.9 Refrigeration Systems.....	23		
S-5.9.1 Qualified Employees.....	23		
<b>S-6.0 Gas Welding, Cutting, Heating, and Arc Welding.....</b>	<b>25</b>		
S-6.1 Area Protection.....	25		

S-6.1.1	Protecting Wooden Structures .....	25	S-8.3	Vehicles within Intermodal Facility .....	34

S-8.2.13	Track Protection—Intermodal and Automotive .....	33			

S-10.2.3 Entering a Derailed Track ..... 48

S-10.2.4 Effective Warning System for Locomotive Movement ..... 48

S-10.2.5 Cut Out Locomotive Air Horns ..... 48

S-10.2.6 Use of Crossing Ramps on Locomotives in Shop ..... 48

S-10.2.7 MU Cable Receptacle Lid Holder .... 49

S-10.3 Working On or Near Engines ..... 49

S-10.3.2 Sounding Alarm Bell ..... 49

S-10.3.3 Avoid Hazards While Working ..... 49

S-10.3.4 Working on Air Brake Rigging ..... 49

S-10.3.5 Air Box Work on Locomotives ..... 49

S-10.3.6 GE-8/-9 Locomotive Startup Procedure ..... 50

S-10.3.7 Working Near Hot Engine Components ..... 50

S-10.4 Rotating Crankshaft ..... 50

S-10.5 Locomotive Inspections, Tests and Maintenance..... 50

S-10.5.1 Inspection and Maintenance ..... 50

S-10.5.2 Preparing for Test ..... 51

S-10.5.3 Conducting Load Test ..... 51

S-10.6 Safety Guards ..... 51

S-10.7 Precaution Entering Restricted Access Cars .... 52

S-10.8 Doors/Load Dividers ..... 52

S-10.8.1 Doors ..... 52

S-10.8.2 Load Dividers ..... 52

S-10.9 Securing Unattended Equipment ..... 52

S-10.10 Steel Cables for Moving Cars ..... 52

S-10.11 Repairing Cars Containing or Last Contained Hazardous Materials ..... 52

S-10.12 Starting and Idling Locomotives Inside Shops .. 53

S-10.13 Painting ..... 53

S-10.14 Adding Water to Locomotives ..... 53

S-10.15 Repairing Locomotives and Railcars Set Out on Line of Road ..... 53

S-10.16 Leaving Equipment in the Clear ..... 55

S-10.17 Locomotive Lockout/Tagout (LOTO) Procedures ..... 55

S-10.17.1 Preventing Engine from Starting with Battery Knife Switch Closed .... 55

S-10.17.2 Preventing Engine from Starting by Opening Battery Knife Switch ..... 56

S-10.17.3 Working on Electrical Systems with Battery Knife Switch Closed ..... 56

S-10.17.4 Working on Air Components ..... 56

S-10.18 Working on Top of Locomotives and Cars ..... 56

**S-11.0 Material Handling ..... 59**

S-11.1 Material Storage ..... 59

S-11.1.1 Stacking Material ..... 59

S-11.1.2 Overhead Clearance ..... 59

S-11.1.3 Storing Combustibles ..... 59

S-11.1.4 Storage Racks ..... 59

S-11.2 Hand Trucks ..... 59

S-11.3 Pallet Use and Stacking ..... 59

S-11.4 Loading and Unloading Cars, Trucks, and Trailers ..... 59

S-11.5 Sharp Edges ..... 60

S-11.5.1 Banding Material ..... 60

S-11.5.2 Sharp Edges/Slivers—Metal ..... 60

S-11.5.3 Sharp Edges/Nails—Wood ..... 60

S-11.6 Wheelsets ..... 60

S-11.7 Hazardous Material Handling ..... 60

S-11.7.1 Complying with Regulations ..... 60

S-11.7.2 Loading or Unloading Tank Cars .... 61

S-11.7.3 Handling Fluorescent/Neon Tubes .. 61

S-11.7.4 Disposing of Spray Containers ..... 61

S-11.8 Forklifts..... 61

S-11.8.1 Parking Requirements ..... 61

S-11.8.2 Dismounting Forklift—Attended and Unattended Forklifts ..... 61

S-11.8.3 Passengers ..... 62

S-11.8.4 Tool Storage ..... 62

S-11.8.5 Seat Belts ..... 62

S-11.9 Forklift Operation..... 62

S-11.9.1 Speed and Movement Restrictions . 62

S-11.9.2 Getting On or Off ..... 62

S-11.9.3 Operation On Ramps ..... 62

S-11.9.4 Gates/Doors ..... 62

S-11.9.5 Load Limits ..... 62

S-11.9.6 Unloaded Fork Position ..... 62

S-11.9.7 Personnel Baskets ..... 62

S-11.9.8 Inspections ..... 63

S-11.9.9 Fueling a Forklift ..... 63

**S-12.0 Motor Vehicles and Trailers ..... 65**

S-12.1 Operation of Motor Vehicles ..... 65

S-12.1.1 General Requirements ..... 65

S-12.1.2 Crossing Tracks ..... 65

S-12.2 All-Terrain Vehicles (ATVs) ..... 66

S-12.3 Motorcycle Use ..... 66

S-12.4 Utility Vehicles ..... 66

S-12.5 Seat Belts ..... 66

S-12.6 Passengers ..... 66

S-12.7 Maintenance/Inspections ..... 66

S-12.8 Backing ..... 67

S-12.9 Parking ..... 67

**This page left blank intentionally.**

At BNSF Railway, our vision is that we will operate free of accidents and injuries. We work in a safe but unforgiving environment with real risk for incidents with serious consequences. Life/safety critical rules were put in place to prevent serious injuries and fatalities.

Rules and procedures:

- Outline expected practices, set standards and provide a basis for safety training.
- Help us identify and control or minimize risk.

Written rules and procedures cannot protect us; they are merely words. To protect ourselves, we must individually commit to and comply with them. Understanding and appropriately applying rules and procedures are part of BNSF Railway's proactive safety efforts. Our goal is that we all go home safely at the end of the shift.

## S-1.0 Core Safety Rules

### S-1.1 Job Safety Briefing

Employees will participate in a job safety briefing at the beginning of the shift, before changing jobs and as conditions change. This briefing must include a discussion of the tasks to be performed, present exposures and the associated risks, along with methods to control or minimize any such risks. Employees will identify opportunities throughout the duration of each task to pause the work and re-brief, such as when conditions surrounding the task change. To help in preparing an effective job safety briefing, the following should be considered:

#### **Who**

All individuals involved in the tasks, or who are in the work area, must be included in the job safety briefing; including, but not limited to, immediate crew members, supporting or adjacent crew members, supervisors, outside parties or contractors, and other work groups.

#### **What**

An engaging, two-way dialogue to ensure that all individuals involved understand the tasks to be performed. This includes a discussion of the tasks, identifying present exposures and the associated risks that are or will be present in the tasks, and reviewing ways to control or minimize such risks. If you see a better way to perform a task, or are not confident in your understanding, talk about it.

#### **Why**

To ensure that tasks are done safely and efficiently, without injury or incident, meeting or exceeding BNSF standards.

#### **When**

At the beginning of the shift, before changing jobs and as conditions change.

#### **Where**

At the work site, in the depot, break room, or locker room, or wherever all individuals involved can gather.

#### **How**

The following elements are essential to any job safety briefing:

- Review of the tasks.
- Identification of exposures and the associated risks.
- Assignment of duties and responsibilities.
- Required tools, equipment, materials, processes, and procedures.
- Methods for controlling or minimizing risk.
- Opportunities to pause the work and re-brief.
- Debriefing at the end of the tasks.

**At the conclusion of your job safety briefing, all individuals involved must be able to answer the following questions:**

- What tasks will we be performing? What will we be doing?
- What are the processes we must follow to complete the tasks?
- What exposures are present in the tasks, and what are the associated risks?
- What can we do to control or minimize the risks?
- What should we do if conditions surrounding the tasks change?
- When should we pause the work and re-brief?

## **S-1.2 Rights and Responsibilities**

We have the right and responsibility to perform our work safely. Our training, skills, work experience, and personal judgment provide the foundation for making safe decisions about work practices.

### **S-1.2.1 Sufficient Time**

Take sufficient time to perform job tasks safely.

### **S-1.2.2 Authorized and Trained**

Perform job tasks only when authorized and trained to perform them.

### **S-1.2.3 Alert and Attentive**

Assure that you are alert and attentive when performing duties.

### **S-1.2.4 Co-Workers Warned**

Warn co-workers of all unsafe practices and/or conditions.

### **S-1.2.5 Safety Rules, Mandates, Instructions, Training Practices and Policies**

Comply with all applicable safety rules, mandates, instructions, training practices, and policies.

- BNSF Policies can be found on the BNSF Intranet.
- Employees without Intranet access may request a copy of any applicable policy from a supervisor.

### **S-1.2.6 Warning Signs**

Comply with verbal warnings, warning signs, posted instructions, and placards identifying restricted areas, safety and health precautions, or potential hazards.

### **S-1.2.7 Two or More People**

Do not perform a task alone that can only safely be performed by two or more people.

### **S-1.2.8 Reporting**

Make reports of incidents immediately to the proper manager.

### **S-1.2.9 Horseplay**

Conduct yourself in a way that supports a safe work environment free of horseplay, practical jokes, and harassment.

### **S-1.2.10 “Bill of Rights” Relative to Employees Riding in Transport Vehicles**

A large percentage of our employees are transported to and from various locations. To ensure safety issues are addressed while transporting in vehicles, all employees are empowered to take the necessary steps to ensure a safe workplace for ourselves and our co-workers. Exercise the following rights with regard to riding in transport vehicles.

#### **Right 1**

Expect transport vehicles to be properly serviced, maintained, and in good working order. In addition, contract vans must be clean with all seat belts and all safety appliances working.

#### **Right 2**

Expect a job safety briefing regarding movements to be made, route to be taken, location of safety appliances, i.e. fire extinguisher, first aid kit, emergency response plan in the event of a medical emergency, etc.

#### **Right 3**

Expect the vehicle to be parked in the most accessible, safest location closest to the passenger pick up/drop off location. Consider the surrounding area and vehicle clearances when positioning the vehicle. When practical, stop the vehicle off any public roadways.

#### **Right 4**

Expect the vehicle to be secured against movement after it has stopped for loading or unloading passengers and baggage, by placing the vehicle in park, securing the parking brake and shutting off the engine.

#### **Right 5**

Expect the vehicle to be positioned, when possible, to avoid backup movement. When necessary to back a vehicle with BNSF employees as passengers, expect the driver to request assistance by positioning a crew member or other employee outside the vehicle, near the back of the vehicle to guide the movement. Before backing a vehicle, the driver and all passengers will conduct a safety briefing to ensure that employees remain clear of the expected movement.

#### **Right 6**

During hazardous weather conditions, expect the driver to not use cruise control, and have the necessary traction devices, studs or chains, when weather requires and allowable by law. If weather reports or actual conditions indicate it is not safe to do so, travel may be canceled or delayed. Immediately notify the dispatcher and your supervisor if the trip is canceled or delayed.

#### **Right 7**

Expect that the driver will not be distracted from driving by such things as eating, drinking or operating electronic devices.

#### **Right 8**

Expect every van used to transport employees between stations to have a functional two-way radio, which could be a crew member's pack-set, tuned to the appropriate railroad frequency.

#### **Right 9**

Expect that the driver will require all employees to have seat belts on before the vehicle is moved, and will stop the vehicle when the driver is aware that seat belts are removed by any occupant. We cannot safely rely on the driver assuring that all employees remain buckled up after the vehicle is in motion. As co-workers, we are obligated to constantly remind each other to wear seat belts where required and to follow all rules that pertain to our work place.

**Right 10**

Expect that all doors are securely closed before departure.

**Right 11**

Expect to be reminded of the BNSF No Smoking Policy, as necessary.

**Right 12**

Our employees are empowered with the right to refuse to be transported in an unsafe vehicle or be driven by a driver who does not meet the aforementioned criteria. The sole responsibility of our safety cannot rest on just the driver.

**S-1.2.11 Medical Conditions**

All employees are responsible to ensure their personal medical condition does not interfere with their ability to safely perform their duties.

Employees with medical conditions (such as uncontrolled diabetes, high blood pressure, sleep disorders including apnea, visual impairment, hearing impairment, etc.) that may adversely affect their ability to work safely must inform their medical practitioner of their job duties.

The medical provider must determine that any prescribed treatment including medication will not impair the employee from safely performing their job duties. The employee must notify their physician/medical provider if prescribed treatment and/or medication is affecting their ability to safely perform their job duties.

**S-1.2.12 Medical Examinations**

The Medical Department will determine when medical examinations are necessary, the content of such examinations, and requirements for participation as the needs arise. Employees subject to these examinations must follow any and all requirements as issued.

**S-1.2.13 Conflict of Interest**

Officers and employees of the company must not have personal interests which might conflict or appear to conflict with the interests of the company or its affiliates or which might influence or appear to influence their judgment in performing their duties. The outside activities and affairs of all officers and employees should be conducted so as to avoid loss or embarrassment to the company and its affiliates.

Employees must not engage in another business or occupation that would create a conflict of interest with their employment on the railroad or would interfere with their availability for service or the proper performance of their duties.

This rule is designed to foster a standard of conduct which reflects credit in the eyes of the public on the company, its officers, and its employees, and which protects the reputation and financial well-being of the company.

In addition, there is no intent to interfere with the personal interests or activities of officers and employees.

**S-1.2.14 Mandatory Stretching Before Work**

All mechanical locations are to implement mandatory stretching for all employees and managers before start of shift. Only perform BNSF approved stretches.

## **S-1.2.15 Good Faith Challenge**

### **A. Right to Challenge**

Federal Regulations have provisions that allow an employee the right to challenge a directive which, based upon the employee's good faith determination, would violate a railroad operating rule relating to:

- Shoving movements,
- Leaving equipment foul of an adjacent track,  
or
- Handling of hand-operated switches or fixed derails.

### **B. Good Faith Challenge Procedure**

1. An employee may inform a supervisor issuing a directive that a good faith determination has been made that the directive would violate a railroad operating rule relating to:
  - Shoving movements,
  - Leaving equipment foul of an adjacent track,  
or
  - Handling of hand-operated switches or fixed derails.
2. The supervisor will not require the employee to comply with the directive until the challenge is resolved. The supervisor may:
  - Require the challenging employee to perform other tasks not related to the challenge until the challenge is resolved,  
or
  - Direct an employee, other than the challenging employee, to perform the challenged task before the challenge is resolved. Employee so directed will be informed of the challenge, and determine that the challenged task does not violate the rules.

### **C. Resolving Good Faith Challenge**

1. A challenge may be resolved by one of the following:
  - The supervisor's acceptance of the employee's request.
  - An employee's acceptance of the directive.
  - An employee's agreement to a compromise solution acceptable to the person issuing the directive.
2. If the challenge cannot be resolved because the supervisor issuing the directive has determined that the employee's challenge has not been made in good faith or there is no alternative to the direct order, the railroad will:
  - Provide immediate review by at least one manager, which must not be conducted by the supervisor issuing the challenged directive or that supervisor's subordinate.
  - Resolve the challenge using the same options available for resolving the challenge as the initial supervisor.

3. If the manager making the final decision concludes that the challenged directive would not be final and not subject to further immediate review.
  - The manager will inform the employee that Federal law may protect the employee from retaliation, if the employee's refusal to do the work is a lawful, good faith act.
  - The employee making the challenge will be afforded an opportunity to document, in writing or electronically, any protest to the manager making the final decision before the employee's tour of duty is complete. The employee will be afforded the opportunity to retain a copy of the protest.

**D. Request for Review and Verification of Decision**

Upon written request, at the time of the challenge, the employee has the right for further review by the "Designated Review Manager". Within 30 days after the expiration of the month during which the challenge occurred, the "Designated Review Manager" will verify the proper application of the rule in question. The verification decision shall be made in writing to the employee.

**E. Employee Rights and Remedies**

The Good Faith Challenge is not intended to abridge any rights or remedies available to the employee under a collective bargaining agreement or any Federal law.

## **S-1.4 Tools and Equipment**

### **S-1.4.1 Inspection**

Inspect tools and equipment for defects before and during use. Repair or remove from service those that fail inspection. Promptly tag and report to your supervisor or person in charge any defect(s). If necessary, guard the hazard.

### **S-1.4.2 Use as Intended**

Use tools and equipment for the purposes intended.

### **S-1.4.3 Manufacturer Specifications**

Read and follow the manufacturer's specifications when using tools and equipment.

### **S-1.4.4 Manufacturer Approval**

Secure manufacturer approval for any changes made in the recommended use or design before using.

### **S-1.4.5 On or Off Moving Equipment**

Do not get on or off moving equipment, except in emergency to avoid injury.

### **S-1.4.6 Three-Point Contact**

Maintain at least three-point contact when getting on or off vehicles, equipment, and machinery, and when ascending or descending ladders or platforms. Three-point contact consists of both feet and one hand or both hands and one foot.

## **S-1.5 Work Environment**

### **S-1.5.1 Housekeeping**

Keep work locations, vehicles, and the inside and outside of buildings clean and orderly at all times.

**S-1.5.2 Inspection**

Inspect your work locations and vehicles for any conditions that might cause injury, property damage, or interference with service. If you find such a condition, take necessary action to protect against the hazard, or discontinue activities in the area or with the vehicle. Promptly tag (where appropriate) and report any defect or hazard to your supervisor or person in charge.

**S-1.5.3 Footing**

Be alert to all walkway conditions, and adjust your actions to accommodate weather, time of day, and grade. Guard against slipping and stumbling hazards by using handholds and railings when available. Except in emergency, running is not permitted in the performance of duty.

**S-1.5.4 Confined Spaces**

Consider all confined spaces hazardous unless proven otherwise. Only authorized and trained individuals may enter confined spaces.

**S-1.5.5 Hazardous Materials**

Handle contaminants and hazardous chemicals according to all applicable government regulations and BNSF policies.

**S-1.5.6 Smoking**

BNSF prohibits smoking in all enclosed properties by employees, customers, contractors, vendors, and guests. Outdoor smoking should be confined to designated smoking areas where provided and must not interfere with non-smokers' rights to clean air as they enter and leave buildings.

“Smoking” means lighting, burning, inhaling or exhaling any substance, tobacco or vapor product including electronic cigarettes or other devices (pipes, cigars) which emits either vapor or smoke.

“Enclosed properties” means all BNSF-owned or leased office space or buildings, shops, automobiles, rail or work equipment vehicles, locomotives, and all other railroad rolling stock. All other federal, state, and local smoking laws / prohibitions must also be complied with.

**S-1.5.7 Sexual Harassment**

Employees on duty or on railroad property must not sexually harass others. Sexual harassment includes unwelcome sexual advances, requests for sexual favors, or other verbal or physical sexual conduct given under the following conditions:

- An individual must submit to the conduct as a term or condition of employment.
- If an individual submits to or rejects the conduct, that action is used to influence decisions affecting the individual's employment.
- The conduct interferes with an individual's work performance or creates an intimidating, hostile, or offensive work environment.

Employees who feel they have been sexually harassed must contact their supervisor, department head, HR or the Employee Hotline as the normal order of preference.

### **S-1.5.8 Retaliation**

Retaliation against any employee for exercising the right to make a complaint and/or the right to participate or assist in an investigation of a complaint or discrimination is prohibited.

Any employee who believes he or she has been subject to discrimination or retaliation has a responsibility to report this fact to their supervisor, the appropriate Human Resources Representative, and/or the BNSF Hotline at 1-800-533-BNSF.

## **S-1.6 Working On or About Tracks**

### **S-1.6.1 Movement of Equipment**

Expect the movement of trains, engines, cars, or other equipment at any time, on any track, and in either direction.

- Employees must not stand on the track in front of an approaching engine, car, or other moving equipment, unless required to do so for the work being performed.
- Employees must be aware of location of structures or obstructions where clearances are close.

### **S-1.6.2 Employees Fouling the Track**

Employees must always be alert and expect the movement of trains, engines, cars or other moveable equipment at any time, on any track and in either direction. Before fouling any track, employees have an individual responsibility to determine it is safe to do so. If the track is occupied by rail equipment, employees must ensure appropriate protection has been provided for the task to be performed.

## **S-2.0 Chemical Safety**

### **S-2.1 Environmental Safety**

In compliance with BNSF's environmental protection policy, take measures to prevent:

- Spills of oil or other material.
- Discharge of contaminants to sewers, waterways, or the ground.
- Smoke and gas emissions when operating combustion equipment.

Treat all unidentified material as hazardous until identified. Do not transport unidentified material.

### **S-2.2 Chemical Spills and Chemical Releases to Air**

In the event of a chemical spill or release of a chemical or unknown material to the air, evacuate the area.

Report oil or hazardous material spills promptly to the dispatcher and your supervisor. Include in your report:

- Spill location.
- Material and amount of spill.
- Distance to the nearest public waters.
- Other important information.

Do not take any further action unless you are specifically trained to do so, using appropriate protective gear and work practices.

Do not re-enter the affected area until given the "All Clear" by incident response personnel.

### **S-2.3 Labeling Chemical Containers**

At the time you place a chemical in a container, affix to that container a label identifying the chemical and appropriate hazard warnings. Container labels must conform to requirements described in the most current version of BNSF Hazard Communication program document.

### **S-2.4 Ventilation for Maintaining Safe Atmospheres**

Provide mechanical ventilation to enclosed areas when:

- Applying solvents, paints, and other chemicals.
- Welding, torch cutting, or burning.
- Emissions from combustion engines, stoves, or heaters (especially in enclosed areas) may cause concentration of excessive airborne contaminants.
- Recommended in product instructions or MSDS/SDS.

Ventilation systems should be designed and installed in accordance with relevant generally accepted design principles. Systems should be inspected and serviced, as necessary, according to an established schedule.

### **S-2.5 Skin Cleaning**

Use company-supplied hand creams and soaps for cleaning hands, arms, face, and other parts of the body.

- Do not clean any part of your body with gasoline, solvents, or oily rags.
- If the skin has been exposed to corrosive agents (acids or bases) use plain water to flush continuously for at least fifteen minutes.
- Do not apply ointments, soaps, or creams to chemical or thermal burns.

## S-2.6 Containment and Spill Prevention

When dispensing petroleum products or other materials such as soaps and solvents from drums or containers:

- Whenever possible, place drums in a vertical position and use an appropriate pump for dispensing the product. Place an absorbent mat or dike on top of the dispensing drum or container.
- If drums must be placed in a horizontal position, use self-closing dispensing valves.
- Place the drum or container in a dike or other containment.
- Place containment devices such as drip pans under drums and valves.
- Properly label the receiving container in accordance with the requirements of the most current version of the BNSF Hazard Communication written program.
- When dispensing flammable liquids, ground and bond all containers.
- Gravity flow valves are not recommended for outdoor usage.
- Properly dispose of contaminated absorbent material and mats.

## S-2.7 Protection from Lead Exposure

Conduct all work involving lead coatings in accordance with BNSF's Lead Program.

## S-2.8 Protection from Asbestos Exposure

Conduct all work involving asbestos in accordance with BNSF's Asbestos Control Program.

### S-2.8.1 Repair and Maintenance

When providing any repair or maintenance where Asbestos Containing Materials (ACM) or Potential Asbestos Containing Materials (PACM) will likely be disturbed, or where ACM or PACM will be removed, implement the applicable requirements of the Asbestos Control program.

### S-2.8.2 Training

Before working with ACM or PACM, complete asbestos training. Complete additional asbestos training on an annual basis as long as you continue to work with ACM or PACM.

## S-2.10 Protection from Silica-Containing Dust

BNSF approved respiratory protection must be worn during the following operations when visible dust is generated:

- Maintenance of Way activities when visible dust is produced. This includes, but is not limited to, ballast dumping, scarifying, brooming, etc.
- Taconite handling and related maintenance operations when working within Belt Buildings and other locations where visible dust is present.

## S-2.11 Chemical Approval

Do not bring a chemical product onto BNSF property until the chemical is approved.

## S-2.12 Biohazard Safety

Any minor release of biohazard resulting from a minor injury (first aid level) must be cleaned-up by the injured person using a BNSF-approved Biohazard Spill Clean-up Kit and in accordance with the instructions enclosed with the kit.

All major releases, such as those resulting from grade crossing accidents or serious injury should be immediately reported to the Resource Operations Center for handling.

## **S-3.0 Electrical Safety**

### **S-3.1 Requirements**

#### **S-3.1.1 General**

- Use ground fault circuit interrupters (GFCIs) on electrical circuits when working in damp areas or outdoors.
- Do not use portable metal ladders for electrical work.
- Do not use electrical cords for hoisting or lowering.

#### **S-3.1.2 Authorized Employees**

Only authorized and trained employees are permitted to work on electrical apparatus or equipment. Wear a dielectric hard hat when working where you could contact power lines or high-voltage equipment.

#### **S-3.1.3 Warning Signs**

Place danger signs near exposed energized circuits.

#### **S-3.1.4 Flashlights**

Use only an approved flashlight with a nonmetallic case around electrical equipment.

#### **S-3.1.5 Contacts**

Do not use flag sticks or other objects to close or open contacts on engines under electrical load.

#### **S-3.1.6 Lockout/Tagout**

Follow approved lockout/tagout procedures:

- Assume all wires, conductors, and other electrical equipment are energized, unless known to be locked out.
- Do not alter safety features of fuses, circuit breakers, or other electrical equipment.
- Do not open secondary circuits of energized current transformers.

### **S-3.3 Charging and Jumping Batteries**

#### **S-3.3.1 Precautions for Servicing Batteries**

Follow these precautions when servicing batteries:

- Do not smoke in battery-charging areas.
- Do not allow open flames, sparks, or electric arcs in battery-charging areas or around exposed batteries.
- Make sure charging area is adequately ventilated.
- When charging a battery, keep the vent caps in place to avoid electrolyte spray.
- Leave the battery compartment doors open when charging an engine battery from an external source.
- Wear face shield over splash goggles and other protective equipment as required by the job when filling or charging a battery.
- Do not permit battery electrolytes (acid) to contact eyes, skin, or clothing. Wash battery electrolytes from your eyes or skin with cold water immediately.
- Remove any leads from terminal posts when scrapping batteries.

**S-3.3.2 Battery Flushing**

Use insulated funnels for flushing batteries.

**S-3.3.4 Metallic Objects**

Keep tools, metal jewelry (including watches), and other metallic objects away from the top of uncovered batteries.

**S-3.3.5 Jumping Batteries**

Do not use a welding machine to jump-start a battery.

**S-3.4 Passenger and Business Cars**

**S-3.4.1 Connecting and Disconnecting 480 Volt Connections**

480 Volt electrical jumper cables between business cars or any other car so equipped will be considered to be energized until applicable lockout/tagout procedures confirm connections are de-energized. All connections and disconnections are to be performed by authorized mechanical personnel only.

## **S-5.0 Fire Prevention, Response, and Hazards**

### **S-5.1 General Requirements**

Know and understand area emergency plans and special instructions related to fire protection.

In case of smoke or fire, notify all individuals who may be affected, supervisors, and appropriate emergency responders.

Keep exit aisles, emergency exits, and fire doors clear. Keep areas around buildings, structures, and equipment free of fire hazards.

### **S-5.2 Emergency Procedures**

Fight a fire only if properly equipped and if your personal judgment dictates you can do so safely.

#### **S-5.2.1 Locomotive Fires**

If a fire occurs on locomotive, stop the locomotive as soon as possible, evacuate the crew safely and report fire to proper authorities.

#### **S-5.2.2 Right of Way Fires**

Employees must report promptly to the train dispatcher any fires seen on or near the right of way or if there is danger of the fire spreading to a bridge or other structure unless the fires are being controlled.

Do not drive through plumes of smoke or chemical vapors unless necessary to escape from a life-threatening situation.

### **S-5.3 Fire Extinguishers and Protection Devices**

#### **S-5.3.1 Defective Fire Extinguishers**

Report any out-of-date, discharged, or defective fire extinguishers to proper authority.

#### **S-5.3.2 Access to Fire Extinguishers and Protection Devices**

- Maintain clear access to fire extinguishers, alarm boxes, and other fire protection devices.
- Do not park vehicles or place material within 25 feet of fire hydrants.

#### **S-5.3.3 Use of Gasoline/Oil-Burning Devices**

Have an approved fire extinguisher readily available where the use of gasoline or an oil-burning device is authorized.

#### **S-5.3.4 Open Flames**

Never leave open flames unattended.

### **S-5.4 Starting Fires**

Do not use gasoline, kerosene, or other highly flammable liquids to start or intensify a fire.

## S-5.5 Fueling Vehicles, Machinery and Equipment

While fueling vehicles, machinery, power tools, and other equipment:

- Stop engines (diesel locomotives excluded).
- Do not smoke.
- Avoid open flames.
- Do not leave fueling hose unattended when fueling.

Fuel gasoline-powered tools before use. If refueling is necessary during use, be careful to avoid spills and allow the engine to cool before refueling, since hot engine parts may ignite fuel.

While fueling, make sure the fuel container spout or hose nozzle touches the side of the tank opening to prevent static electricity discharge. Use only approved containers to transport fuel.

## S-5.6 Electrical Circuits

If you are not experienced in handling energized electrical circuits, do not attempt to extinguish fires on power line poles or directly connected equipment.

Never use water to extinguish fires on energized power line poles or electric equipment.

## S-5.7 Hazardous Material Storage and Dispensing

Store chemicals according to group and segregate each group from one another. Groups are defined as flammables and combustibles, oxidizers, caustics (bases), and acids.

### S-5.7.1 Storing Chemicals

When it is not possible to segregate groups of chemicals by storing them in appropriate storage cabinets, separate groups by a minimum of 20 feet.

To separate chemicals for safe storage, store up to 25 gallons of flammables (flash point < 73° F) and up to 120 gallons of flammables or combustibles (flash point 73° F - 200° F) at least 20 feet away from other groups, or separated from other groups with a properly rated fire-resistant partition extending 18 inches above and beyond the flammables.

### S-5.7.2 Grounding

Use grounding and bonding when dispensing or transferring flammable liquids.

## S-5.8 Use and Handling of Liquefied Petroleum Gas (LPG)

### S-5.8.1 Testing

Use only LPG tanks that are tested and stenciled as required by DOT regulations.

### S-5.8.2 Avoiding Extreme Heat

Keep units powered by LPG away from extreme heat sources, such as ovens or furnaces.

### S-5.8.3 Handling Leaks

Test for leaks with soapy water. Do not use an open flame near the leak.

If a tank containing LPG is leaking, notify your supervisor and stay upwind of the tank. LPG is heavier than air and will collect in low areas, sometimes far away from the leak source.

**S-5.8.4 Refueling LPG Tanks**

Refuel LPG tanks outdoors:

- At least 50 feet from buildings.
- At least 15 feet from storage tanks at the end farthest from the relief valve.

Change portable tanks outdoors, where possible, and at least 50 feet from any open flame except on outfit cars with kitchen facilities. When placing LPG tanks on motor vehicles, first stop the motor.

**S-5.8.5 Closing Valves**

At the end of the day's operation, close valves on tanks of LPG-powered equipment to prevent leaks and potential explosions.

**S-5.9 Refrigeration Systems****S-5.9.1 Qualified Employees**

Only qualified employees may work on refrigeration systems.

**This page left blank intentionally.**

## **S-6.0 Gas Welding, Cutting, Heating, and Arc Welding**

### **S-6.1 Area Protection**

Clear all combustible material or rubbish 35 feet away from the area where welding or cutting will be performed. Where relocation is impractical, combustibles shall be protected with flameproof covers or curtains.

#### **S-6.1.1 Protecting Wooden Structures**

Use metal or a piece of wet flame-retardant material, or wet down the structure thoroughly when welding or cutting against or near wooden structures.

Use a fireproof covering adequate to protect the floor from sparks or hot metal when welding or cutting in a building with wooden floors.

Do not use wooden horses or boards to support welding or cutting work.

#### **S-6.1.2 Protecting Concrete**

Do not lay an object or material to be heated, cut, or welded on concrete.

Use protective material over concrete to prevent slag from falling on concrete when cutting metal with oxy/fuel gas.

### **S-6.2 Electrical Welding**

#### **S-6.2.1 General Requirements**

- Do not stand in water or damp places while welding, except when wearing waterproof, insulated footwear.
- Set up a suitable screen marked “Do Not Look at Arc” at welding sites to shield those not engaged in the welding operation.
- Do not look at the arc if you are working near a welding process, but not welding. If your work does not permit proper screening, wear approved welding goggles or glasses.
- Use a wire brush to remove slag from material being welded. Do not use your hand, even if gloved.

#### **S-6.2.2 Welding Machines**

For welding machines:

- Ground the frame or case of a welding machine (excluding engine drive machines) under the conditions and according to the methods prescribed in the National Electric Code for fixed or portable equipment.
- Thoroughly dry and test wet machines before using them.
- Do not change the polarity switch setting on a welding machine while the machine is operating under a welding current load.

#### **S-6.2.3 Welding Ground Connections**

When welding ground connections:

- Secure the ground clamp as close as possible to the work before starting the electric weld.
- Do not connect the ground cable to any type of piping.
- Do not use chains, wire rope, cranes, hoists, or elevators to carry welding current.
- Do not make a welding ground connection in such a way that welding current will pass through any type of machine bearing.

### **S-6.2.4 Welding Cables**

For welding cables:

- Use insulated locking connections when welding cable extensions are required.
- Repair deep cuts or cracks in welding cable casing promptly.
- Keep welding cables dry and free from grease and oil where practical.
- Uncoil and spread out coiled welding cables before use to avoid overheating and damage to the insulation.
- Do not use welding cables with repair splices within 10 feet of the electrode holder.
- Store electric welding cable in a dry, cool location, away from direct sunlight, when not in use. Clean the cable before storing, and coil it loosely with no sharp kinks or bends.

### **S-6.2.5 Electrode Holders**

For electrode holders:

- Use only an approved electrode holder with insulated jaws.
- Keep electrode holders clean to prevent arcing.
- Do not cool electrode holders in water.

### **S-6.2.6 Electrodes**

For electrodes:

- Remove metal and carbon electrodes from electrode holders when not in use.
- Retract or cut off the wire electrodes in semiautomatic holders, and remove the electrode holder from the power connection lug when not in use.
- Do not tap an electrode or strike an arc against a compressed gas cylinder.
- Dispose of used electrodes properly.

## **S-6.3 Fire Fighting Equipment**

Have a fire extinguisher readily available when welding or cutting inside or immediately adjacent to a building.

Have a fire extinguisher, water, sand, or dirt readily available when welding or cutting on track or along the right of way.

## **S-6.4 Welding or Cutting in Confined Space**

Test all equipment for leaks and adjust regulators before entering a confined space. Purge the accumulated mixture in the hoses by opening the torch valve for about ten seconds.

When performing hot work, comply with the practices and precautions outlined in the BNSF Confined Space Program.

Remove all welding equipment from the confined space if work is interrupted.

## **S-6.5 Restrictions for Making Welding Equipment Repairs**

### **S-6.5.1 Torches, Regulators, or Other Welding Apparatus**

Do not tamper with or attempt to make field repairs to gas cylinders, welding torches, regulators, or other welding apparatus.

Exception: Packing gland nuts on leaking torches may be tightened.

**S-6.5.2 Hooks and Chains**

Do not weld, cut, or heat:

- Heat-treated hooks.
- Steel alloy chains and associated rings, links and couplings.

**S-6.5.3 Flammable Containers**

Do not weld, heat, cut or rivet tanks, tank cars, locomotive fuel tanks, barrels, pipes or similar containers that have held gasoline, oil or other flammable or explosive material until the containers have been thoroughly purged.

Exception: When under authorized supervision, repair or modify diesel or lube oil pipelines, storage tanks, dispensing facilities or fuel tanks without purging. Follow prescribed procedures.

**S-6.5.4 Protection from Chlorinated Solvents**

Do not weld, cut, burn or braze metal cleaned with chlorinated solvents until all surfaces, both inside and out, are clear of the solvent and solvent vapor.

**S-6.6 Oxygen and Fuel Gas****S-6.6.1 General Requirements**

- Before use, operator must inspect all cylinders, hoses, fittings, regulators and torches.
- Follow proper oxy-fuel gas equipment assembly, leak testing, torch lighting and shutdown procedures as outlined in the Department Safety Processes and/or posted instructions.
- To prevent a possible explosion, do not allow oil or grease to come into contact with oxygen or any equipment through which oxygen passes.
- Do not use oxygen to dust off clothing or work areas.
- Do not allow a jet of oxygen to strike an oily surface or greasy clothes, or to enter a fuel oil or any other storage tank.
- Use a layer of clean sand, a metal plate, or other suitable material to protect oily or greasy floors or the ground from slag.
- Do not allow the operating hose pressure for acetylene to exceed 15 psi.
- Do not pass a lighted torch to another employee.
- Use a wire brush to remove slag from material being welded or cut. Do not use your hand, even if gloved.

**S-6.7 Welding Hose and Fittings****S-6.7.1 General Information**

- Date-tag new and employee-assembled hoses when placed in service. Place the date tag at the regulator end of the hose.
- A minimum of 6 inches of hose should be removed from the torch end annually, or more frequently whenever damage or wear indicates that replacement is necessary.
- Do not place a welding hose that is in use over any part of your body.
- Do not use a hose with more than one splice per 50-foot section.
- Select fittings with adequate inside diameter to avoid flow restrictions.

**S-6.7.2 Welding Hoses**

Use only grade “T,” 3/8-inch twin hoses for gas welding, cutting, and heating operations.

**S-6.7.3 Welding Hose Fittings**

For welding hose fittings:

- Use a crimped clamp to permanently attach hose fittings to welding hoses. Do not use bolted hose clamps.
- Use only fittings furnished by a qualified supplier in compliance with OSHA regulations.
- Do not use dropped or damaged fittings.
- Each time a fitting is installed, an approved leak detection liquid must be used to test for leaks at fittings.

The following requirements must be met when quick disconnects are used in oxygen - fuel gas processes:

- Purchase only approved, UL-listed quick disconnects.
- Employees must receive training on quick disconnects before their use and demonstrate safe use of the equipment.
- Quick disconnect flow rating must meet or exceed the SCFH requirements for the attached equipment.
- Do not install quick disconnect fittings in systems where splices, couplers or additional fittings are used to lengthen or repair damaged hose assemblies.
- Do not use quick disconnects with check valves when a check valve is an integral part of the flash back arrestor (additional check valve will reduce flow rates).
- Flash back arrestor must still be used. Quick disconnects do not replace the need for a flash back arrestor. Do not install the quick disconnect directly to the flash back arrestor.
- Before initial use, and before attaching the torch to the assembly (fittings), use a direct reading instrument to verify that an adequate flow rate will be reaching the torch.

Exception: Quick disconnects shall not be used in System Engineering welding applications.

**S-6.7.4 Welding Hose Fires**

If a fire develops in a hose, remove the torch, regulator, and hose from service.

**S-6.8 Installing Reverse Flow Check Valves and Flashback Arrestors****S-6.8.1 Portable Systems**

On portable systems, install combination reverse flow check valves/flashback arrestors at the torch on both the fuel gas and oxygen lines.

### **S-6.8.2 Bulk Fuel or Manifold Fuel Gas Systems**

On bulk fuel or manifold fuel gas systems, install pipeline protective device(s) on the fuel gas line that performs the following three functions:

1. Prevents backflow of oxygen into the fuel gas supply.
2. Prevents flashback into the fuel gas supply.
3. Provides pressure relief through the use of a pressure relief valve, rupture disk, or similar device.

Install a pressure relief device on the supply line from the oxygen source. All these devices must precede the service outlets.

Install reverse flow check valves at each station outlet on the fuel gas and oxygen lines. Install combination reverse flow check valves/flashback arrestors at the torch on both the fuel gas and oxygen lines.

By placing unnecessary check valves in the systems, the safety of the employee may be adversely affected due to the restriction in flow rates to the torch. A direct reading in-line instrument should be used to ensure that adequate flow rate is reaching the torch.

### **S-6.9 Oxy/Acetylene Torch**

For oxy/acetylene torches:

- Use only approved flint strikers to light a welding torch.
- Do not lay a lighted torch down, pass it from one person to another, or hold it when climbing.
- Do not leave a cutting or welding torch in a tank, tank car, fuel compartment, or other similar work location when not in use.
- Do not test the flow of the oxygen or fuel gas by placing the torch tip against your face or body, or by smelling it.

### **S-6.10 Hot Work on Fuel Tanks**

Hot work will not be performed on any tank which contains, or had contained flammable or combustible liquid, without first ensuring that steps are taken to eliminate the presence of a flammable or explosive fuel-air mixture. No work will be done on tanks still containing fuel.

**This page left blank intentionally.**

## S-7.0 Hand Tools

### S-7.1 Hand Tool Inspection

Inspect tools for defects before use. Do not use tools with:

- Cracks.
- Mushroomed striking surfaces.
- Burrs.
- Slivers.
- Loose/missing wedges.
- Worn ratchets/teeth.
- Loose/cracked handles.
- Other defects.

### S-7.2 Redressing of Striking or Struck Hand Tools

Before redressing, visually inspect the tool for the following:

- A manufacturer's brand.
- A letter "B" to identify grade B steel.

If either brand or letter is not found, discard the tool. Also discard the tool if it is mushroomed, spalled or chipped.

Redressing of grade B tools is allowed. Redressing is allowed on non-grade B steel hand punches and chisels manufactured by Snap On, Proto, S & K, Ajax, Mayhew and Williams only.

- Redress tools frequently to reduce the amount of flow on the struck end of the tool.
- Redress tool with a hand file only, unless you are qualified to redress tools with a properly equipped bench grinder. "Qualified" means approved by a certified instructor upon completion of BNSF "Redressing of Hand Tools" course.

### S-7.3 Precautions During Use

When using tools such as knives, chisels, and screwdrivers, direct sharp edges away from your body or hands.

#### S-7.3.1 Swinging Tools

- Warn others to keep clear when using swinging tools (such as a spike maul, sledge, hook-a-roon, ax, pick, brush hook, hand adze, etc.). Stand so that the point is away from your body if the tool unexpectedly flies to the side.
- Before using swinging tools, remove oil, grease and dirt from hands and handles.

#### S-7.3.3 Tools With Sharp Edges/Blades

- Pocket knives are not to be used to perform work tasks.
- When using hand tools that have sharp edges/blades, direct cutting edges away from the body, including the hands.
- When using hand tools that have sharp edges/blades, wear cut-resistant gloves.
- Where utility knives are determined as the tool of choice for a task, use utility knives that have self-retracting blades.

#### **S-7.4 Pry/Lining Bars**

Never straddle, sit, or stand on a claw bar, lining bar, anchor wrench, or similar tool.

#### **S-7.6 File Cleaning and Use**

Use files with handles. Clean the file with a brush.

#### **S-7.7 Correct Tool Use**

Use tools only for what they are designed to do. If unsure about a tool's correct use, ask your supervisor.

#### **S-7.9 Punches and Chisels**

When punches or chisels are used, a tool holder must be used along with the appropriate gloves.

#### **S-7.10 Knife Usage**

All Mechanical employees must complete a knife training course. Only knives approved and provided by the BNSF may be used in the workplace. (Personal pocket knives are not allowed.)

Under no circumstances are knives to be used to strip insulation from electrical wire including traction motor leads and traction motor boots. In addition, knives are not to be used for cutting rubber or plastic hose.

Before beginning any task which requires the use of a knife, employees must complete a job safety briefing with their supervisor or lead-person. The briefing must include a discussion of the general procedure plan, existing or potential hazards, and way to eliminate or protect against those hazards, i.e. PPE such as gloves and/or sleeves, body positioning and possible alternatives to the use of a knife. Knives must not be used for tasks in which there is a specialty tool available.

#### **S-7.11 Leatherman Prohibition**

The use of the subject tool or similar multipurpose tools by personnel is prohibited. Such tools are not designed for industrial use and are not approved.

## S-8.0 Intermodal/Automotive Facility Safety

Contractor employers are also responsible for ensuring that their employees comply with applicable rules and regulations. If in doubt as to the meaning or application of any rule or instruction, individuals should request an explanation from their supervisor or manager.

Regional Directors, Hub Managers, Office Personnel, Intermodal Gate Personnel, Intermodal Coordinators, BNSF Intermodal Equipment Operators, Intermodal Ground Personnel, Intermodal Crane Operators, Intermodal Hostler drivers, Intermodal Repair personnel and Yard Checkers are governed by the Employee Safety Rules.

### S-8.1 Core Intermodal/Automotive Facility Safety Rules

- Establish proper track protection before performing work.
- Vehicles must not STOP on, PARK on, or FOUL tracks without proper protection.
- Do not drive or park on lift equipment lanes, under lift equipment, or impede lift equipment movement.
- Obey all posted safety signs, signals, and painted markings.
- All vehicles must turn on headlights and use turn signals.
- Never place any part of your body in a pinch point position (for example, when removing an IBC with the container suspended, standing between containers, trailers, chassis, or the area where the hitch will collapse), or walk under equipment being lifted.
- Maintain at least three-point contact when getting on and off equipment.
- Do not walk, stand, or work under a suspended load. When possible, avoid walking, standing, or working under crane booms.
- Do not stand or walk into the path of moving equipment.
- Position yourself in clear view of the operator of equipment when possible.

### S-8.2 Blue Signal Protection of Intermodal and Automotive Workmen

#### S-8.2.13 Track Protection—Intermodal and Automotive

Blue signal protection procedures also apply to BNSF intermodal and automotive employees and contractors performing functions on or in the vicinity of intermodal or automotive track(s) as defined in the Track Protect Section of the intermodal and automotive hub operations manuals. Only a designated intermodal or automotive worker may apply/remove blue signal protection for this purpose.

BNSF intermodal and automotive employees and contractors must not perform functions on or in the vicinity of an intermodal or automotive track(s), regardless of whether the track(s) is occupied by rail car(s) or engine(s), unless the designated intermodal/automotive worker responsible for applying/removing blue signal protection confirms blue signal protection is established on that track(s).

The designated worker may remove blue signal protection from a track(s) only after confirming:

- Rail car or engine movement is necessary on the track(s),
- All affected intermodal/automotive workers understand blue signal protection will be removed from which track(s) and those workers and their equipment are clear of that track(s),  
and
- No intermodal/automotive workers are performing functions on or in the vicinity of the affected track(s).

## S-8.3 Vehicles within Intermodal Facility

### S-8.3.1 Vehicle Requirements

Required safety equipment on yard vehicles must be functioning and used when the vehicle is operated on the facility. This includes strobes or oscillating lights, headlights, tail lights, and brake lights, turn indicators, and windshield wipers. All personnel operating within an intermodal facility must comply with the following chassis deflector policy.

- Employees must not use private vehicles in place of yard vehicles.
- All pick-up trucks, vans, step vans, and other specialized vehicles permanently assigned, or who work on the facility daily (for example, trailer repair, tire repair, lift equipment repair, crew haulers, facility maintenance, etc.) must be equipped with chassis deflectors.
- Other vehicles will not be allowed on the intermodal property at any time unless the driver of the vehicle is issued a “Facility Authorization Pass” that identifies the authorized vehicle. The Facility Authorization Pass must be visible through the front windshield of the vehicle whenever the vehicle is on the facility property. BNSF Hub Management must use careful consideration before issuing an authorization pass and must require all drivers to review the “Intermodal Yard Rules.” (Do not issue this pass until the proper liability forms have been completed.)
- Vehicles can be limited to specific routes within the hub, particularly when workers must drive a private vehicle to their workplace within the hub property. Authorized vehicles, which are limited to a specific route within the hub, cannot be used to drive to any other location within the facility.
- All equipped vehicles will have headlights/running lights on dim. Service partners vehicles assigned to the ramp, including ramp tractors and lift equipment, must also display illuminated amber strobe lights.

### S-8.3.2 Vehicle Operations

Vehicle operators must:

- Stop for flares and flashing lights at crossings.
- Yield to trains, yard equipment and pedestrians.
- Cross only at designated crossings.
- Operate the vehicle in a careful manner and observe traffic directions and signs.
- When leaving the vehicle unattended, the vehicle operator must place standard transmission in low gear or automatic transmission in Park and shut off the engine.
- If the vehicle is left running for any operational reason, wheel chocks must be applied on the front and back of the driver-side front wheel and any available brakes set (air or park brake).

### S-8.3.5 Shifted/Leaning Loads

**Shifted Loads**—Employees must notify their supervisor immediately if they discover that a load may have shifted. If safe to move the unit, they should keep the unit as low to the ground as possible, move slowly and make safe wide turns.

**Leaning Loads**—When a unit has been identified as a leaning load, notify all workers at the facility of the leaning unit including BNSF management or a designated representative. This can be accomplished through direct verbal communication, telephone or radio. At Oasis locations an Alert should be sent to all users.

Employees must notify their supervisor and/or terminal manager before moving any leaning loads. The following applies:

- If the unit is leaning on the rail car – do not unload.
- If the unit is unloaded as TOFC, do not move the unit.
- If the unit is unloaded as Container on Flatcar (COFC), set it on the ground, not on a chassis.
- Stay with the unit until the manager or supervisor arrives to take charge of the unit.

Securement Procedures:

- Secure the unit with appropriate lockout/tagout procedures:
- For units on wheels, apply “glad hand locks” to glad hands if available. If glad hand locks are not available; remove both glad hands.
- Place a sign on the front of the unit stating: DANGER: LEANING LOAD DO NOT MOVE by inserting sign in the electrical receptacle on the trailer.

Containers:

- Position the LEANING LOAD sign in the upper lift casting in the most visible casting location on the container. This device will prevent the twist lock from entering the casting to lift container.
- Place orange safety cones on all sides of the unit.
- Do not move the unit with any piece of equipment until it is determined that the load is safe for movement.

The supervisor must enter appropriate information in the Transportation Support System (TSS). To communicate to all employees the leaning condition of the unit to prevent anyone from attempting to move the unit:

- Outgate “stop orders” are placed.
- Service recovery plan (SRL) in TSS entry to advise affected parties.
- “Van note” is placed in the units TSS record to describe leaning condition.
- Place on Hold using the TSS “LSHOLD” command if unit is scheduled to be loaded to rail car.

## S-8.4 Manned Check Point Ingate/Outgate Procedures

All BNSF non-automated checkpoints that have inspectors working on the ground in lanes where drivers receive inspections will be designed as outlined below and driver and inspector must comply with the following procedures:

- Establish an area 35 feet from the inspection lane and declare this area the Safe Clearance Zone between trucks and the inspection lane. An area three feet wide will be painted red across each lane.  
Exceptions:
  - South Seattle, Billings, Dilworth – no safe zone required; not manned.
  - St. Paul, Spokane, Portland – 15 feet from the inspection lane.
  - St Paul – yellow stop bar instead of red.
  - Fresno – 25 feet from inspection lane.
  - Los Angeles main yard, Lot 8, Lot 9, Lot 11, Bell Lot, and Commerce Lot – 30 feet from inspection lane.
- Stop signs will be posted at this area in each check lane and the ground stenciled with the word STOP (painted in white) across the lane. Drivers will be required to turn truck engines off while stopped at the inspection stop signs or painted stop bars on the pavement in the checkpoint lanes. Each facility should add “Turn Engine Off” signs to the current stop bars or stop signs, effective immediately.
- Mounted on the pole below the stop sign will be a white sign with black lettering that states: “WAIT FOR SIGNAL TO MOVE FORWARD.”
- Cones with a height of 48 inches will be placed in the middle of each check lane and removed only by the inspector that signals a vehicle to pull forward. When the vehicle is stopped, the inspector will replace the cone back into the middle of the check lane. This procedure is repeated each time an inspection is to be performed.
- Inspectors will not enter the inspection lane until the truck engine is turned off for the unit to be inspected, and the truck engine is turned off for the truck at the stop sign or stop bar in the first queuing position behind the inspection lane. The inspector will instruct drivers when they can re-start their tractors and proceed. The cone shall remain in the lane until the inspector removes it.

### S-8.4.1 Intermodal—Manned Checkpoint Ingate/Outgate Procedures

Checkpoint Equipment Inspectors must be familiar with the following:

- Be aware of any potential slip, trip, or fall hazards. Keep your work area clear of all such obstacles. Know where curbs, poles, and other fixed objects are located. Checkpoint booth must be clean and orderly.
- Never begin the inspection of the equipment until the vehicle is completely stopped and the driver acknowledges your presence.
- Standing, walking or running in front of any moving equipment is dangerous and is prohibited; never run in the checkpoint area, and always look both directions before crossing lanes.
- Never take risks by opening doors on loaded units without securing locking bars with restraint straps.
- Never crawl, walk or position yourself under a trailer, tractor, container or chassis.
- Never walk between the trailer, containers, or chassis until both drivers acknowledge that they see you.
- Be aware of the risks associated with hazardous material, and never assume it is safe to touch materials or breathe vapors.
- Inspectors must observe the weather and be aware of the additional safety hazards associated with periods of undesirable weather conditions. Use extreme caution during adverse weather conditions.

### **S-8.4.2 Intermodal—Temporary Manned Checkpoint Ingate/Outgate Procedures for Automated Gate Systems**

All BNSF automated checkpoints that have contingency plans with inspectors working on the ground in lanes where drivers receive inspections will include procedures as close as possible to manned gate operations for the safety of personnel on the ground. The operation must meet the following standards:

1. Establish an area in the inspection lane and declare this area the safe clearance zone between trucks and inspection lane.
2. Cones with a height of 48 inches will be placed in the middle of each check lane and will be removed only by the inspector who signals a vehicle to pull forward. When the vehicle is stopped, the inspector will replace the cone back into the middle of the check lane. This procedure is repeated each time an inspection is to be performed.
3. Inspectors will not enter the inspection lane until all the truck engines are turned off so that the unit can be inspected. Also, the truck engine must be turned off for the truck at the stop sign or stop bar in the first queuing position behind the inspection lane. The inspector will instruct drivers when they can re-start their tractors and proceed. The cone must remain in the lane until the inspector removes it.

### **S-8.5 Leaking Units**

Employees must be observant of the condition of units. Notify management immediately upon discovery of a leaking unit. Treat all leaking units as hazardous until the commodity is identified. Proper safety procedures must be followed when the leaking material has been identified.

### **S-8.8 Mechanical Employee Protection While Repairing a Rail Car on an Intermodal Ramp Track**

Repair personnel must:

- A. Clean up work area and discard replaced material and debris (welding rods, nuts, bolts, etc.) in proper containers.
- B. Have required Material Safety Data Sheets (MSDS). Every employee should have reasonable access to MSDS information while working within the facility.
- C. Use required Personal Protective Equipment (PPE). Waist, ankle, arm and reflective protection are acceptable inside shop areas only.
- D. Enhanced visibility work wear is:
  - Not required when performing work inside buildings (this exception does not apply to indoor service tracks).
  - Not required when walking from one building to another on designated walkways within designated mechanical facilities.
  - Not required by employees while wearing leathers when performing hot work outdoors. Upon completion of hot work, high visibility PPE must be worn in accordance with the requirements outlined in this rule.
- E. When required to perform repair work under rail cars on an intermodal ramp track while trailers or container/chassis are being loaded or unloaded, employees must be governed by blue signal rules, Hub Policies, and the following employee protection procedures:
  - Employee must notify the Hub Coordinator (or Supervisor) of the track number, rail car number and platforms affected.

- The Hub Coordinator (or Supervisor) will advise the ramp loading/unloading crews of the rail cars and platforms to be protected and then notify employees that loading/unloading crews have been advised of work.
  - An employee working under a rail car must ensure that all prescribed blue signal protection is in place before work begins.
  - Employee will install barricades and flashing amber lights (refer to the Hub Operations Manual H-2.2) on the crane path, or 25 feet from the rail car at the ends of the platforms that fall within the “Work Zone” (The “Work Zone” will include the car number where the work is being performed plus one additional car number on either side). The barricade and flashing amber light are awareness devices for the protection of the employee.
  - The barricades and flashing amber lights must not be installed until all trailers and container/chassis are removed from the rail cars in the work zone.
- F. After the barricades and flashing amber lights are installed, the ramp loading crew will adhere to the following:
- No equipment (trucks, trailers, container/chassis or lift equipment) can enter into the “Work Zone” while the barricades and flashing amber lights are in place.
  - On the tracks with two sides, equipment can be spotted to the opposite side of the rail car from the “Work Zone”.
  - After repairs are completed, the employee will remove the barricades and flashing lights and notify the Hub Coordinator that they are done and in the clear.
  - Normal loading activities may continue on all other rail cars in the same track or adjacent tracks.

### S-8.9 Tire Repair—Mobile Vehicle Requirements (Outside of Vehicle)

Repair personnel must:

- A. Clean up work area and discard replaced material and debris (welding rods, nuts, bolts, etc.) in proper containers.
- B. Have required Material Safety Data Sheets (MSDS). Every employee should have reasonable access to MSDS information while working within the facility.
- C. Use required Personal Protective Equipment (PPE). Waist, ankle, arm and reflective protection are acceptable inside shop areas only.
- D. Enhanced visibility work wear is:
  - Not required when performing work inside buildings (this exception does not apply to indoor service tracks).
  - Not required when walking from one building to another on designated walkways within designated mechanical facilities.
  - Not required by employees while wearing leathers when performing hot work outdoors. Upon completion of hot work, high visibility PPE must be worn in accordance with the requirements outlined in this rule.
- E. While on BNSF property, all tire repair vehicles must comply with all of the following requirements:
  - Chassis deflector bars (Refer to BNSF Hub Operations Manual Policy Statement 1999-04B – Chassis Deflectors).
  - Strobe light must be located on opposite corners of trucks @ 360 degrees (RR, LF).
  - Company logos on the doors and unit numbers for identification purposes.
  - Six safety cones (36-inch safety cones are required) should be mounted appropriately (do not obstruct the view of the driver) on a post or stacked and secured inside the vehicle.

- Must conform to State and Federal Motor Vehicle Registration and Safety Standards if required.
- Must be equipped with seat belts.
- Must be equipped with reverse signal alarms.
- Pickups with towed equipment are acceptable with safety chains and light brake connection.
- Vehicles must normally be turned off when left unattended. If required to run to support equipment, the driver's side wheel must be chocked in both directions and any manual brake applied.

### **S-8.9.1 Items Allowed inside of the Tire Repair Vehicle**

Equipment allowed inside tire repair vehicles:

1. Approved mount/dismount portable tire cage is required.
2. Air compressor, secured to the floor and properly vented. Air hoses will be properly stored and off of the floor to reduce tripping hazards.
3. Tires should be secured properly (tire rack).
4. Cabinet to store flammable items.
5. Secured tool boxes and bins.
6. Tire locking ring and wheel information charts.
7. A secured tool rack for hammers, tire bars and other tools.
8. Fire extinguisher:
  - Every repair vehicle must be equipped with a five-pound to ten-pound fire extinguisher.
  - The fire extinguisher must be mounted in the front floor of the cab.
  - The fire extinguisher must be tagged, up-to-date and in good working condition.
9. Wheel chock.
10. Jack and jack stand: (Must meet Occupational Safety and Health Administration (OSHA) standard.) Must be marked with rating. The jack stand and jack should be stored when not in use.
11. Appropriate impact gun for tire replacement, capable of a minimum of 500 pounds-foot of torque.
12. Proper impact sockets for wheel replacement.
13. Appropriate airing methods must be utilized.
14. Remote air valve 24 inches away from tire valve (OSHA standards/requirements).
15. Portable fans.
16. 12-volt batteries only when secured in a battery box.

No recreational electronics such as microwaves, televisions, computer games, etc., are allowed. No materials in violation of BNSF policy, such as inappropriate material or photos, are allowed.

## S-8.10 Trailer Repair—Mobile Vehicle/BNSF Mechanical Vehicle

Repair Requirements (Outside of Vehicle)

Repair personnel must:

- Clean up work area and discard replaced material and debris (welding rods, nuts, bolts, etc.) in proper containers.
- Have required Material Safety Data Sheets (MSDS). Every employee should have reasonable access to MSDS information while working within the facility.
- Use required Personal Protective Equipment (PPE). Waist, ankle, arm and reflective protection are acceptable inside shop areas only.

Enhanced visibility work wear is not required:

- When performing work inside buildings (this exception does not apply to indoor service tracks).
- When walking from one building to another on designated walkways within designated mechanical facilities.
- By employees while wearing leathers when performing hot work outdoors. Upon completion of hot work, high visibility PPE must be worn in accordance with the requirements outlined in this rule.

While on BNSF property all trailer repair vehicles must comply with all of the following requirements:

- Chassis deflector bars (Refer to BNSF Hub Operations Manual Policy Statement 1999-04B - Chassis Deflectors).
- Strobe light must be located on opposite corners of trucks @ 360 degrees (RR, LF) (BNSF mechanical vehicle strobe light only).
- Company logos on the doors and unit numbers for identification purposes.
- Six safety cones (36-inch safety cones are required) must be mounted appropriately (do not obstruct the view of the driver) on a post or stacked and secured inside the vehicle.
- Safety cones must be mounted appropriately (do not obstruct the view of the driver) on a post or stacked and secured inside the vehicle.
- Ladders must be mounted on the outside of the vehicle or inside of the vehicle and secured appropriately.
- Must conform to state and federal motor vehicle registration and safety standards if required.
- Must be equipped with seat belts.
- Must be equipped with reverse signal alarms.
- Pickups with towed equipment are acceptable with safety chains and light brake connection.
- Vehicles must normally be turned off when left unattended. If the vehicle is required to run to support equipment, the driver's side wheel must be chocked in both directions and any manual brake applied.

### S-8.10.1 Equipment Allowed Inside of Trailer Repair Vehicle

Equipment allowed inside trailer repair vehicles:

1. Combustible fuel – maximum gasoline allowed is 5 gallons, stored in a spring-loaded steel gasoline safety can.
2. All vehicles that transport explosive or combustible fuel (for example, propane, acetylene, and gasoline) for auxiliary equipment and/or furnaces must be equipped with an enclosed storage compartment vented to the outside.
3. Adequately secure the container to prevent it from moving when the vehicle is being operated.
4. Leaking containers must be promptly taken out of service and replaced.
5. Welding machine – if a welding machine is in an enclosed vehicle, it must be bolted to the floor and vented through the floor.

6. Cables will be secured up off the floor; welding rods will be secured and stored to prevent a tripping hazard.
7. Air compressor – if an air compressor is in an enclosed vehicle, it must be bolted to the floor and vented through the floor. All hoses must be secured and stored up off the floor.
8. All moving gears, belts and pulleys will have the appropriate manufacturer's safety guards in place.
9. Oxygen and acetylene tanks:
  - Both tanks should be capped while the vehicle is moving (upon arrival or departure from the facility).
  - Gauges must be in proper working condition with no broken or damaged parts. They must be stored in a manner to prevent contamination from any petroleum products.
  - Hoses should be intact with no splices, frayed, or taped areas and must be stored off the floor to prevent tripping hazards.
  - Torch lines must be equipped with flashback arrestors at both the torch and tank ends.
10. Ladders must meet OSHA standard.
11. One first aid kit. All outside service partner repair employees working within the facility should be equipped with a first aid kit.
12. Fire extinguisher.
13. Every repair vehicle must be equipped with a five-pound to ten-pound fire extinguisher.
14. Fire extinguisher must be properly mounted for easy access within the truck cab.
15. Fire extinguisher must be tagged, up-to-date and in good working condition.
16. Flammable cabinet.
17. Every repair vehicle must have a flammable cabinet to store all flammable material and aerosol cans.
18. Flammable cabinet must be secured inside the repair vehicle.
19. Electrical hardware cabinet to store cords, connectors, and lugs (this cabinet must be secured).
20. Secured storage rack for tools, bins and boxes.
21. Trailer jack and jack stand: (Must meet OSHA standard) Must be marked with Rating. Jack stand and jack should be stored when not in use.
22. Adequate shelving for parts along the wall and must be bolted to the floor.
23. Employee's tool box – tools must be stowed in tool box. The cab must be kept clean, and no tools (or garbage) should be on the floor or loose in the cab.
24. Grease gun.
25. Portable lighting that is up to code. Bulbs must be shielded. Lighting should be stowed and secured properly.
26. Portable fans.

No recreational electronics such as microwaves, televisions, computer games, etc., are allowed. No material in violation of BNSF policy, such as inappropriate material or photos, is allowed.

**This page left blank intentionally.**

## **S-9.0 Ladders, Platforms, Scaffolds, and Aerial Baskets**

### **S-9.1 Inspection**

Before using a ladder, scaffold, platform, or elevated board, inspect it to make sure it is securely placed and capable of supporting a load. Do not use cross-grained or knotty lumber in any part of the device.

Before using ladders, inspect them for:

- Broken, cracked, or missing steps, rungs, or cleats.
- Broken side rails.
- Other defects.

Never use a defective ladder. Tag and mark it for repair or replacement. Do not paint wooden ladders or splice side rails.

### **S-9.2 Storage**

Store ladders (except vehicle-carried ladders) where they will not be exposed to the weather.

### **S-9.3 Stage Boards**

When using stage boards not securely fastened to the supports, do not let them extend more than 6 inches beyond the last support. Use stage boards equipped with end stops or drop pins to keep them in place on the supports.

### **S-9.4 Safety Feet**

Use only portable straight ladders equipped with grippers, cleats, or nonslip safety feet suitable to the surface on which the ladder is placed.

### **S-9.5 Ladder and Scaffold Placement**

Place a straight ladder so that the distance from the base of the ladder to the vertical plane of the support is approximately 1/4 the ladder length between the supports and ladder base.

When setting ladders or portable scaffolds:

- Extend the ladder side rails at least 3 feet above the surface you will be stepping onto.
- Place the legs on firm footing and secure them against movement.
- Do not lean legs against an unstable object.
- Do not place legs on boxes, barrels, or blocks for additional height.
- Secure the ladder or scaffold in position if it could move.
- Do not use ladders in a horizontal position as runways or scaffolds.
- Secure ladders used near a door, aisle, pathway, or roadway, or have a co-worker guard the ladder base. When using a ladder within the swing of a door, secure the door or have employee guard the ladder base.

### **S-9.6 Ladders for Electrical Work**

Do not use metal ladders or scaffolds while working on energized electrical circuits. Use approved fiberglass or other type of approved nonconductive ladders.

## **S-9.7 Instructions for Climbing**

When climbing:

- Always face ladders or scaffolding.
- Do not stand higher than the manufacturer's specifications dictate.
- Have only one person on a ladder at a time.
- Do not jump or slide from a ladder, scaffold, platform, or other elevated position.
- Do not move laterally from one ladder to another.
- Never overreach or attempt to "walk" a ladder.
- Keep the center of your body within the outside rails of the ladder.

### **S-9.7.1 Climbing with Tools or Materials**

Do not climb ladders with tools or materials in your hands; use a hand line.

Position tools or materials on a scaffold or platform where they will not fall or be knocked off.

## **S-9.8 Performing Work**

Do not work under a ladder.

## **S-9.9 Extension Ladders**

Use only approved extension ladders, and use them as follows:

- Carefully raise them so that the top of the ladder safely overlaps the support by 3 feet minimum.
- Make sure guides and hooks are properly engaged.
- Do not splice short ladders together to make a longer one.

## **S-9.10 Step Ladders**

Follow these instructions when using step ladders:

- Use only a fully open step ladder with spreaders properly set.
- Do not use step ladders taller than 10 feet unless another employee holds and steadies the ladder.

## **S-9.11 Construction Scaffolding**

Use only scaffolds and suspended platforms constructed and maintained according to departmental instructions.

Do not stand on the handrails of any scaffold or platform to gain additional height.

### **S-9.11.1 Sectional Metal Scaffolds**

Erect sectional metal scaffolding according to the manufacturer's instructions and adequately brace. Maintain outriggers in good working condition and protect from damage.

## S-9.12 Non-Powered Mobile Scaffolding

When using non-powered mobile scaffolding:

- Do not ride rolling scaffolds.
- Secure or remove all material and equipment from the platform before moving the scaffold.
- Apply caster or wheel brakes at all times when a scaffold is stationary.
- Do not try to move the scaffold without help.
- Watch out for holes in the floor and for overhead obstructions when moving the scaffold.
- Follow the manufacturer's guidelines for adjusting screws.

## S-9.13 Aerial Work Platforms

When working from aerial platforms, including scissor lifts and boom-mounted baskets or buckets:

- Check pathway and overhead for obstructions before moving the platform.
- Always stand firmly on the floor and do not sit or climb on the edge of the platform or use planks, ladders or other objects to increase reach.
- Do not exceed the manufacturer's rated safe load.
- Maintain a safe distance from high-voltage power sources.
- Do not modify the equipment without prior written approval from the manufacturer.

### S-9.13.1 Scissor Lifts

When working from a scissor lift:

- Platform must be equipped with a guardrail and toeboards. Guardrails must be completely installed, in good condition and with gates fastened.
- Never climb or stand on toeboards or guardrails. Never hang outside the guardrails.
- If required by local or state law, a safety belt or harness must be worn that meets the same requirements as in S-9.13.2. Safety belts may only be used for fall restraint in scissor lifts.
- Personnel using fall protection or restraint equipment must attend appropriate training.

When working from elevated platforms or scissor lifts, use only elevated platforms or scissor lifts equipped with a guardrail and toeboards.

### S-9.13.2 Boom-Mounted Baskets or Buckets

When working from a boom-mounted basket or bucket:

- A harness equipped with a lanyard that restrains personnel within the platform must be worn to prevent personnel from being ejected out of the platform.
- The lanyard must be secured to an anchor point designed and designated by the manufacturer for this use.
- Do not attach the lanyard to a pole, piece of equipment, or any other structure.
- Do not allow the platform to rest on or against any structure or equipment while working from the platform, unless this practice is permitted based on the manufacturer's operating manual for the unit.
- Do not climb in or out of an elevated basket or bucket, unless it is equipped with a door or a gate and the lift is positioned to provide safe access.
- On equipment designed primarily as personnel carriers, use only equipment with upper and lower platform controls where the lower controls can override the upper controls.
- Personnel using fall arrest or restraint equipment must attend appropriate training.

### **S-9.14 Work Platforms and Platforms used to Cross Tracks**

All work platforms and platforms used to cross tracks will have handrails that are removable or permanently mounted. The top rail will be set at 42 inches and shall be capable of withstanding a load of at least 200 pounds applied at any point on the top rail. The handrail must also include a mid-rail and a 4-inch kick plate. The width of the platform must be a minimum of 24 inches and have an anti-tip over feature. These handrails may have the capability of lying down or be removed to allow equipment to pass over them during spotting operations.

Platforms may not be used or crossed without handrails in upright position.

## S-10.0 Locomotive and Railcar

### S-10.1 Raising Equipment

When raising equipment:

- Block the wheels before raising the end of the equipment.
- Do not place any part of your body under or directly alongside the equipment at any time during jacking/lifting process unless the equipment is (a) supported by approved stands or blocking, or (b) the equipment has been lowered back onto the trucks with proper blocking from truck to car body, or (c) or the jacks are returned to their lowered position.
- Stands must be certified and stenciled with rated capacity.
- Use the proper tongs to remove or position center pins on the cars.
- Use cushioning material between the jack and equipment to prevent slipping. Wood cushioning material must not exceed 1 inch in thickness. Do not allow metal-to-metal contact.

#### S-10.1.1 Safe Jack Use

When jacking an engine, car, or other heavy equipment, make sure to use a jack with the proper capacity and level. Jacks should be stenciled with the proper load rating.

### S-10.2 Moving and Spotting Locomotives Within Mechanical Limits

#### S-10.2.1 Moving

When moving locomotives within mechanical limits:

- Visually inspect the locomotive or consist before moving it.
- Ensure that adequate main reservoir pressure exists and brakes are operable.
- Remove blue signal protection on the locomotive or consist to be repositioned.
- Make sure all personnel are clear of movement.
- Release the hand brake and wheel blocks on the locomotive to be repositioned. When increasing or decreasing the number of units, the operator must be certain that the units left unattended have enough hand brakes applied to prevent movement.
- Personnel must protect the point of movement. Give and receive the proper signal before moving.
- When moving, ring the engine bell continuously and have headlights on dim in the direction of movement. Exception: When moving dead or non-MU locomotives, headlight and bell are not required.
- Sounding the whistle within mechanical limits is prohibited, unless in emergency or when approaching roadway workers on or near the track.
- Do not exceed 5 MPH within shop facility or 1 MPH on turntables.
- If a remote control locomotive is moved using an Operator Control Unit (OCU) the operator must wear an enhanced visibility RCO vest with the OCU properly secured to the vest. All "D" rings on the OCU must be properly attached to the operator's vest.
  - For testing and inspection purposes a remote control locomotive may be moved by an operator using the OCU while inside the cab with the OCU detached from the vest. However, in this case, the locomotive movement must not exceed the length of the locomotive.
  - The OCU must be unlinked from a remote control locomotive and powered off when left unattended.

Engines must not be shoved until the operator knows who is protecting the movement and how protection will be provided. The employee providing protection for the movement shall not engage in any task unrelated to the movement. When engines are shoved, an employee must be in position and provide visual protection.

### **S-10.2.2 Spotting**

When spotting locomotives within a shop facility:

- When the locomotive is in a new position:
  - Apply the independent brake,
  - Apply the hand brake on each locomotive, and
  - Place wheel blocks where applicable. Exception: At mechanical facilities, when locomotives are protected by outbound derails on designated servicing tracks, apply a sufficient number of hand brakes to prevent undesired movement.
- Remove the reverser lever from the control stand.
- Place the generator field switch to OFF.
- Reestablish blue signal protection.

### **S-10.2.3 Entering a Derailed Track**

An engine or engines must not enter a track that has been locked out or that is protected by a derail:

1. Before permission is granted to remove blue signal protection, all employees who are working in that track or length of track that the protection has been provided for are:
  - Notified that the protection is going to be removed.
  - In the clear of the locomotives and track.
2. Employees in charge of the movement must make an effective audible warning and continuous use of the locomotive crossing bell while the movement is being made.

### **S-10.2.4 Effective Warning System for Locomotive Movement**

An effective warning system (i.e. rotating flashing lights, effective audible alarm or horn) is required in shop or repair facilities to warn employees of movements being made.

### **S-10.2.5 Cut Out Locomotive Air Horns**

Locomotive horns must be cut out before the locomotive being placed in the shop. Horns may be cut out with the electrical horn cut out switch or by the horn air supply valve. Cut out means the electrical switch is in the “off” position or the valve that supplies air to the horn is in the “off” position. Each device that activates the horn must have a tag attached that is labeled “Horn Cut Out”. Once the locomotive leaves the shop the horn switch or valve must be returned to the “Cut In” position and the “Horn Cut Out” tag removed.

If the horn is not equipped with a cutout valve or switch the horn must be disabled by some other means; e.g. locking pin, circuit breaker, or guard and properly tagged, “Horn Cut Out”.

### **S-10.2.6 Use of Crossing Ramps on Locomotives in Shop**

Crossing ramps must be installed to bridge the gap between locomotives and shop ramps if they are used to access the locomotive.

**S-10.2.7 MU Cable Receptacle Lid Holder**

A positive means of holding the lid open on the M.U. receptacle must be used when connecting or disconnecting.

**S-10.3 Working On or Near Engines****S-10.3.2 Sounding Alarm Bell**

Before starting the engine:

- If the engine is equipped with a starting alarm bell, sound the bell.
- Determine that all employees are clear of moving parts.

**S-10.3.3 Avoid Hazards While Working**

When working on or near engines:

- Do not put your face or hands near the main generator or any high-voltage equipment while it is working under load.
- Avoid open flames in the engine room unless duties require.
- Do not pull fuses while they are under load.
- Shut down the engine to inspect the fan and radiator compartment.
- Do not open the ground relay protective knife when the ground relay is tripping.
- Mark and barricade the doors in a locomotive to prevent unauthorized persons from entering the cab when the cab floor is removed.
- Carefully remove the radiator cap on a hot engine following the manufacturer's instructions.

**S-10.3.4 Working on Air Brake Rigging**

Ensure that wheels are chocked before working on air brake rigging.

For equipment with air brake truck cutouts:

- Cut out the air brakes at the truck cutout before working on the air brake rigging of engines, cars, or other equipment.

For equipment without air brake truck cutouts:

- With air in the brake pipe, close the angle cocks at both ends of the equipment and close the branch pipe cutout and drain the reservoirs before working on rail cars and other equipment,

or

- With the brake pipe vented to atmosphere and no air charge in the brake pipe, drain the reservoirs before working on rail cars and other equipment.

After repairs are completed, open all angle cocks and cutout cocks to render the brake system operational.

**S-10.3.5 Air Box Work on Locomotives**

When working inside any locomotive air box, the edge must be covered by protective rubber molding to eliminate possible lacerations.

**S-10.3.6 GE-8/-9 Locomotive Startup Procedure**

While cranking the engine, if a power contactor fails in the closed position, the locomotive may move. Handbrakes must be set and employees clear of the undercarriage before starting. Check for closed power contactor before starting.

**S-10.3.7 Working Near Hot Engine Components**

Mechanical employees must take appropriate precautions any time working within an engine compartment when there is the risk of contacting hot locomotive components. Examples of these tasks include, but are not limited to; checking/adding lube oil, checking/adding cooling water, taking oil/water samples, performing engine overhead inspections, changing eductor tubes, or any other task that may involve risk of contact with hot surfaces.

Appropriate precautions include wearing heat-resistant long sleeve apparel, letting the engine/components cool to ambient temperature, and/or placing a physical barrier to eliminate the possibility of contact with the hot components. Acceptable heat-resistant long sleeve apparel includes Proban or leather welding jackets or Proban sleeves.

**S-10.4 Rotating Crankshaft**

To rotate a diesel engine crankshaft with a turning bar, engine turning jack, or other device.

- Stay clear of all pinch points before rotating the crankshaft.
- Move the fuel transfer pump switch to OFF.
- Remove the starting fuse, or block open the starting contactors, and open the cylinder test valves two or three turns.
- Warn others on the locomotive before cranking the engine.

**S-10.5 Locomotive Inspections, Tests and Maintenance****S-10.5.1 Inspection and Maintenance****A. Main Generator and Power Circuits**

While working on or inspecting the main generator or power circuits on locomotives:

- Move the generator field switch to OFF.
- Place the isolation switch in ISOLATE.
- Isolate the power plant from the control on multiple-unit engines.

**B. Traction Motors on Diesel Engines**

When inspecting a traction motor:

- Shut down the diesel engine.
- Move the generator field switch to OFF.
- Close the throttle.
- Remove the detachable reverser handle.
- Set the air brakes.
- Place a “Do Not Start” tag on the engine prime/start switch.

At other than established inspection or shop locations, carry the reverser handle while making the inspection and tag the control stand “Out of Service.”

**C. Repairing Switches, Contactors, or Relays**

Before repairing switches, contactors, or relays on diesel engines, shut down the engine and open the control switch and main battery switch.

Before repairing switches, contactor relays, or related electrical apparatus:

- Shut off all power.
- Use a volt meter to ensure that all currents have been disconnected.

**S-10.5.2 Preparing for Test****A. Testing Diesel Unit**

When testing a diesel unit with the engine running or shut down, or when testing a unit connected to other engines that are running:

1. Do not advance the throttle from idle until the air brakes and the full independent brake are applied and:
  - All brake cylinders are cut in,
  - or
  - Wheels are chocked with the hand brake set.
2. Move the generator field switch to OFF.
3. Center the reverser lever.

**B. Horsepower Load Testing and Self-Testing**

When horsepower load testing the locomotive:

1. Disconnect all MU cables to isolate the locomotive from the remaining consist.
2. Follow the manufacturer's instructions for performing self-tests.

**C. Stall Testing**

When stall testing the locomotive:

1. Disconnect all MU cables to isolate the locomotive from any other locomotives.
2. Do not advance the throttle from idle until the air brakes and full independent brake are applied and all brake cylinders are cut in.
3. Do not advance the throttle past notch ONE. Do not allow unit to move.

**D. Dynamic Brake Testing**

When dynamic brake testing the locomotive, follow the manufacturer's instructions for dynamic brake testing.

**S-10.5.3 Conducting Load Test**

Only authorized employees may be on diesel units undergoing a load test. Wear hearing protection when conducting a load test. If the total load test time in a 24-hour period exceeds six hours (e.g., second work shift), wear double hearing protection (ear plugs and muff) for the second work shift. Keep all people not involved in the operation clear.

**S-10.6 Safety Guards**

Before putting the engine in service, securely fasten all safety guards, equipment cabinet covers, and ceiling hatch covers.

## S-10.7 Precaution Entering Restricted Access Cars

Only employees trained in and using confined space techniques may enter restricted access cars.

## S-10.8 Doors/Load Dividers

Employees must position themselves to avoid being struck by:

- Falling door/load dividers.
- Mechanism or handle under tension.

### S-10.8.1 Doors

Before opening or closing doors on a freight car, closely inspect all door parts to make sure they are intact and properly positioned. Do not open or close doors using the following equipment, unless the equipment is specifically designed for the purpose:

- Truck.
- Tractor.
- Shop mule.
- Forklift.
- Other self-propelled equipment.

Do not remove or replace doors while the car is on jack stands.

### S-10.8.2 Load Dividers

Before moving load dividers in freight cars, make sure overhead carriage and gate hanger parts are intact and properly positioned.

## S-10.9 Securing Unattended Equipment

Secure on-track or off-track rolling equipment when leaving it unattended.

## S-10.10 Steel Cables for Moving Cars

When using steel cables to move engines, cars, or other equipment:

- Keep employees clear of the cables.
- Do not step over the cables.

## S-10.11 Repairing Cars Containing or Last Contained Hazardous Materials

Follow these guidelines when making running repairs to cars containing or that last contained dangerous or hazardous materials:

1. Determine the car's contents or last contents and be familiar with the physical properties and specific hazards of the material. Foremen and car inspectors must possess and understand:
  - DOT Emergency Response Guidebook.
  - Copy of the most recent waybill for the car.
  - Copy of hazardous material information from either the system computer or a copy of the AAR/BOE book "Emergency Handling of Hazardous Materials in Surface Transportation."

2. Inspect the car for leaks, open valves, or partially open bottom bay doors, or other outlets. Keep ignition sources, such as sparks and fires, away until you determine that no leaks, vapors, or hazardous materials are present or may interfere with repairs.
3. If you detect or suspect leaking material:
  - a. Evacuate others from the area. Stay upwind to avoid adverse reactions to the material, until incident response personnel determine that you can safely return.
  - b. Immediately report all leaks to your supervisor, the BNSF Resource Operations Center (ROC) 1-800-832-5425, and the Service Interruption Desk.
4. Do not heat or cut any part of the tank.
5. When using a torch to repair parts other than the tank:
  - a. Place a sheet of protective material between the tank and the flame.
  - b. Keep the heat directed away from the tank.
  - c. Always check cars for possible hazmat contamination before beginning repair, torch, or welding work.

### **S-10.12 Starting and Idling Locomotives Inside Shops**

Do not start or idle locomotives inside a shop unless exhaust is directly discharged outside and exhaust is not allowed to accumulate indoors.

### **S-10.13 Painting**

When painting:

- Obtain and use the appropriate PPE for painting operations.
- Keep sparks, flames, and other ignition sources away from painting operations.
- Refer to MSDS for proper handling of all paint products.

### **S-10.14 Adding Water to Locomotives**

When adding water to General Electric locomotives, use the fill cone and vent/fill valves. Do not remove the pressure cap to add water to General Electric locomotives. Employee must follow the detailed manufacturers instructions that are stenciled on the locomotive.

### **S-10.15 Repairing Locomotives and Railcars Set Out on Line of Road**

Locomotives and cars must be effectively chocked to prevent inadvertent rollout of equipment in either direction.

Before beginning work on locomotives or railcars:

- Establish blue signal protection.
- Chock equipment to prevent movement in either direction.
- For cars, apply track skates as close as practical, but not further than 10 feet from end of the car(s). Place skate(s) on the rail opposite the chocked wheels. If a truck is being rolled out from under a car, the skate is to be moved to accommodate this process and repositioned once the truck is back in place.
- Before leaving job site, verify all wheel skates and chocks are removed from the tracks and properly stored.

### Examples:

#### Single Car:

#### Two Cars:

#### Three or more: Chock car being worked and car on each side.

\* - Track skate should be applied opposite rail of chocks

## S-10.16 Leaving Equipment in the Clear

Employees must work safely and efficiently and avoid damage to contents of cars, equipment, structures, or other property.

Do not leave equipment standing where it will foul equipment on adjacent tracks or cause injury to employees riding on the side of a car, engine or on-track equipment.

On tracks where clearance point is indicated, leave equipment beyond the clearance point.

If the clearance point is not indicated or visible, determine the clearance point by standing outside the rail of adjacent track and extend arm towards the equipment (cars, engines or on-track equipment). When unable to touch the equipment, leave equipment at least an additional 50 feet into the track to ensure equipment is beyond the clearance point.

## S-10.17 Locomotive Lockout/Tagout (LOTO) Procedures

This procedure is to protect you and others from exposure to inadvertent start-up, release of stored energy, or contact with energized electrical systems while working on locomotives. The following steps must be taken regardless of the energy source:

- Notify others working on the locomotive.
- Always disable Smart Start® or similar automatic locomotive self-starting devices through established procedures before beginning work on engine or related systems.
- Always assume system can release stored energy until you have established LOTO as described below and verified stored energy is not present.
- Each person must apply and remove their own LOTO tag.
- Where lockout or tagout devices are applied to the energy isolating point, apply your LOTO tag to this device. When no lockout or tagout device is used, place your LOTO tag at the energy isolating point.
- When finished working on the locomotive, remove your LOTO tag. Never remove a LOTO tag placed on a locomotive by another individual. If your tag is the last tag to be removed, remove the lockout or tagout device, where applied, and restore the system.

### S-10.17.1 Preventing Engine from Starting with Battery Knife Switch Closed

#### A. EMD locomotives

1. Remove starting fuse and apply fuse blank. Apply LOTO tag to fuse blank.
2. If equipped with an Air Starter – cut out the air supply valve to the starters and apply a ball valve lockout device. Apply LOTO tag to lockout device.

#### B. GE locomotives – Utilize one of the following options

- Open fuel pump circuit breaker (FPCB) and apply LOTO tag to FPCB.
- If equipped with barrier bar – raise barrier bar into vertical position and apply multi-lock hasp to latching mechanism. Apply LOTO tag to multilock hasp.
- Open maintenance battery switch, if equipped, and apply tagout device to prevent switch closure. Apply LOTO tag to tagout device.

### **S-10.17.2 Preventing Engine from Starting by Opening Battery Knife Switch**

The movable side of the battery knife switch does not have battery voltage across it when the switch is open.

1. Open battery knife switch and apply tagout device to prevent switch closure.
2. Apply LOTO tag on tagout device.

This will not de-energize all circuits – use a meter to verify no voltage exists at circuit(s) being serviced. If voltage is present, use a schematic to determine how to disable the circuit(s).

### **S-10.17.3 Working on Electrical Systems with Battery Knife Switch Closed**

1. Open circuit breaker protecting the circuit and apply LOTO tag.
2. Use a meter to verify no voltage exists at circuit(s) or other exposed terminals near circuit being serviced. If voltage is present, use a schematic to determine how to disable the circuit(s).

When it is necessary to work on energized equipment, only qualified employees may perform this work. These employees must follow established practices to ensure their safety.

### **S-10.17.4 Working on Air Components**

#### **A. Air Brake Rigging**

1. Close truck cutout valve and drain air from brake cylinder.
2. Apply LOTO tag to truck cutout valve.

#### **B. Other Equipment Tied to Main Reservoir Air System**

1. Drain air to system being repaired, replaced or serviced using established procedures; close associated cutout valve.
2. Apply LOTO tag to cutout valve.

## **S-10.18 Working on Top of Locomotives and Cars**

Where fall protection systems are available, locomotives and railcars must be moved to utilize those systems when work on top of the locomotive or railcar is required. These systems must be used by each employee working on top of the locomotive or railcar.

Where fall protection systems are not available, such as in train yards, mainline fueling or on the line of road, the following will apply:

- Employees must contact their supervisor/employee in charge in order to receive a job safety briefing and determine if the task can be safely performed on top of the railcar or locomotive at that location. The briefing must include the identified risks and appropriate precautions. Authorization must be provided by the supervisor/employee in charge before an employee can access the top of the locomotive or railcar.
- A fall restraint system must be used when working from the nose of locomotives. The system includes a harness equipped with hip D-rings and two lanyards. One lanyard must be connected to each of the two grab irons located above the windshields. If only one grab iron is available, both lanyards must be connected to the single grab iron.

The employee working on top of a locomotive or railcar must use the following precautions:

- Observe for oily, icy, or slippery conditions and take appropriate measures to avoid any conditions that might create loss of balance.
- Use tools or equipment defensively to avoid loss of balance if tool were to slip or disengage. Avoid over-reaching or overexertion while working.
- Where possible, work in a kneeling or seated position.
- Precautions must be taken to protect employees working below from falling objects.

Climbing to the roof top of a locomotive from the nose of the locomotive is prohibited.

**This page left blank intentionally.**

## **S-11.0 Material Handling**

### **S-11.1 Material Storage**

#### **S-11.1.1 Stacking Material**

Store material neatly, interlocking it where possible to prevent shifting or falling. Do not store heavy materials on top of fragile or crushable materials. Material should be stored only on shelving or racks with sufficient rated capacity.

#### **S-11.1.2 Overhead Clearance**

Maintain a minimum of 18 inches of clearance below sprinkler heads so they can operate effectively in the event of a fire.

#### **S-11.1.3 Storing Combustibles**

Keep combustible materials away from a source of ignition.

#### **S-11.1.4 Storage Racks**

Secure material storage racks to the floor or a wall where there is a height-to-depth ratio greater than 3-to-1. If racks can be fastened together to achieve a 3-to-1 ratio, no securement is required. Inspect pallet racks and shelving on a regular basis.

### **S-11.2 Hand Trucks**

When possible, push a hand truck rather than pulling it. However, if assisting someone, push the hand truck from the rear, not from the side, and stand where you can see ahead clearly.

When pulling a hand truck, do not jerk it to get over an obstruction; pull with a steady force. Do not walk backward while pushing or pulling a hand truck or wagon. Do not ride on hand trucks or wagons.

### **S-11.3 Pallet Use and Stacking**

When stacking loaded pallets:

- Determine how much the material and packaging can support.
- Stack pallets only as high as the material on the bottom of the stack can support.
- Inspect pallets for damage and stability.
- The forklift operator must warn others working near the stacking operations.

### **S-11.4 Loading and Unloading Cars, Trucks, and Trailers**

When loading and unloading cars, trucks, and trailers:

- Chock wheels of cars, trucks, and trailers spotted at doors and platforms before loading or unloading.
- Use truck jacks at the front of trailers, in addition to chocking, where trailers are not attached to tractors.
- Make sure all transfer equipment (gangplanks, transfer plates, etc.) is properly secured before using it.
- Do not place gangplanks, transfer plates, or skids in doorways of cars coupled to a locomotive unless there is protection against movement.
- Do not load and unload trailer truck while tractor is being coupled or uncoupled.
- Trucks and trailers secured by an automatic locking bar hooked to the ICC Bar do not require chocks.

## S-11.5 Sharp Edges

Eliminate sharp or ragged edges and nails on drums, cans, and kegs when using them as shipping containers.

### S-11.5.1 Banding Material

Carefully handle banding material and tools as follows:

- Wear cut-resistant or leather gloves to protect your hands from sharp edges of banding.
- Use only band cutters to cut steel bands.
- Place scrap banding in suitable containers for disposal, or move it to a designated area.

### S-11.5.2 Sharp Edges/Slivers—Metal

As a part of risk assessment activities, identify and address any potential contact with sharp metal edges or burrs when working with metal.

- Do not handle sharp metal pieces or slivers with a bare or gloved hand. Use an appropriate tool; e.g., pliers, vice grips.
- Do not slide a bare or gloved hand along rail or metal components during inspection activities.
- After removing slivers from rail, or when handling other metal scraps, be sure to appropriately dispose of the material. Do not leave such materials on the track structure, in right of way areas, or in shop areas, where others may be exposed to injury.

### S-11.5.3 Sharp Edges/Nails—Wood

As a part of risk assessment activities, identify and address any potential contact with splinters, rough edges, or nails when working with wood products.

- Do not slide a bare or gloved hand along wood edges during inspection activities.
- Verify that nails are removed or safely bent over on scrap lumber temporarily maintained at job-sites.

## S-11.6 Wheelsets

To move or stop a freight car or locomotive wheelset:

- Inspect wheelset for burrs, slivers or other sharp edges.
- Wear puncture resistant gloves.
- Use mechanical means for moving wheelsets whenever possible, such as forklift or axle mover.
- Position yourself on the trailing side of the wheelset. Slowly move wheelset to desired position by grasping the flange and rim of wheel. Do not allow hand(s) to slide on wheel.
- Keep hands clear from pinch points that may be created by adjacent wheelsets.
- When possible, place wheel chocks, stops, or skates on rail where wheelset will be stopped.
- Do not walk in front of the wheelset or leave wheelset unattended until they are stopped and secured.

## S-11.7 Hazardous Material Handling

### S-11.7.1 Complying with Regulations

Handle all hazardous materials, wastes, and substances, as defined by the DOT and EPA, according to federal, state, and local regulations and company policy. An authorized employee must supervise the task.

### **S-11.7.2 Loading or Unloading Tank Cars**

When loading or unloading tank cars:

- Make sure cars are protected against movement when loading or unloading material.
- Set hand brake and chock wheels before loading or unloading.
- All tank cars must have a railing around the platforms where workers stand.
- Make sure the outlet valve is shut off.
- If material is flammable, use non-sparking wrenches. Do not smoke or generate sparks or open flames.
- Properly ground tank cars containing gasoline or other flammables.

### **S-11.7.3 Handling Fluorescent/Neon Tubes**

Handle fluorescent or neon tubes carefully. If they break, do not inhale the dust and vapor. Dispose of in accordance with BNSF procedure.

### **S-11.7.4 Disposing of Spray Containers**

Carefully store and dispose of pressure spray containers. Do not expose them to excessive heat. Dispose of them per state law.

## **S-11.8 Forklifts**

### **S-11.8.1 Parking Requirements**

Do not park a forklift on a ramp or incline. When parking a forklift:

- Park the forklift clear of obstructions.
- Set the hand brake.
- Lower the forks.

### **S-11.8.2 Dismounting Forklift—Attended and Unattended Forklifts**

When dismounting forklift and still in attendance of the equipment (within 25 feet and forklift in sight):

1. Bring the forklift to a complete stop.
2. Place directional controls in Neutral.
3. Apply the parking brake, and if equipped with automatic brake, place in Park.
4. Lower forks to the ground. (Exception: when task requires elevated load.)
5. Use a least three-point contact when climbing from forklift.

When leaving a forklift unattended:

1. Lower forks to the ground.
2. Shut off the engine.
3. Remove the key (where security is a problem).
4. Do not allow the forklift to foul tracks.
5. Apply the parking brake, and if equipped with automatic brake, place in Park.

Do not allow yourself or others to be directly in front of or behind forklift, unless engine is shut off.

**S-11.8.3 Passengers**

Passengers are not allowed on forklifts unless the truck is equipped with a passenger seat and seat belt.

**S-11.8.4 Tool Storage**

Do not place tools, material, or other objects on a forklift that may interfere with its operation.

**S-11.8.5 Seat Belts**

Use seat belts where provided.

**S-11.9 Forklift Operation****S-11.9.1 Speed and Movement Restrictions**

When operating a forklift:

- Reduce speed and sound the horn when rounding corners or passing by or through doorways or congested areas.
- Watch for and avoid contact with overhead and side obstructions and overhead wires.
- Make sure the way is clear before moving in any direction.
- Bring a forklift to a complete stop before reversing direction.
- Look in both directions before crossing tracks. Where possible, cross diagonally.
- Operate the forklift backwards if the load obstructs your view.

**S-11.9.2 Getting On or Off**

Do not get on or off a moving forklift. Maintain at least three-point contact when getting on and off forklifts.

**S-11.9.3 Operation On Ramps**

Back a loaded forklift slowly down ramps or inclines.

**S-11.9.4 Gates/Doors**

Do not use a forklift to open or close doors or gates on buildings.

**S-11.9.5 Load Limits**

Do not pick up loads that exceed the forklift's marked load capacity. Do not move the machine until the load is secured.

**S-11.9.6 Unloaded Fork Position**

When moving an unloaded forklift, keep the forks 18 inches or less from the floor or ground to avoid obstructions.

**S-11.9.7 Personnel Baskets**

When using personnel baskets:

- Use a forklift only as an elevator for employees (for example, to service light fixtures) when it is equipped with an approved work platform that meets OSHA standards.
- Always secure the approved basket to the mast guard when using forklift to lift personnel.
- Ensure that passengers stand only on the floor of the basket.
- Fork lift operator must stay at controls while basket is occupied.

**S-11.9.8 Inspections**

- Always do a safety inspection of a forklift before operating it the first time.
- Complete safety inspection records as required.
- Promptly report all defects for needed repairs to the proper authority.
- When defects are found, which affect the safe operation of a forklift, the forklift is to be red tagged, the key is to be removed and the defect immediately reported to the proper authority.

**S-11.9.9 Fueling a Forklift**

- Turn off the engine.
- See Rule S-5.8 for requirements regarding LPG tanks.

**This page left blank intentionally.**

## S-12.0 Motor Vehicles and Trailers

### S-12.1 Operation of Motor Vehicles

#### S-12.1.1 General Requirements

Every company vehicle driver must:

- Know and obey local, state, and federal laws and regulations for operating vehicles, both on and off company property.
- Comply with all rules and procedures listed in the BNSF Company Vehicle Policy and Procedure Manual for operating company or temporary replacement vehicles.
- Possess and carry a valid current driver's license.
- Complete a vehicle log and inspection form, if applicable.
- Ensure that necessary emergency equipment, tools, and a fire extinguisher are in the vehicle and in good condition.
- Use headlights any time the vehicle is moving.
- Not exceed the manufacturer's specifications for speed.
- Operate the motor vehicle in a careful and safe manner.
- Immediately stop operating company vehicles if their license or permit is suspended, revoked, or under any court-required restriction (including, but not limited to restrictions to operate any vehicle with monitoring or a governing device). Any such limits will bar operation of BNSF vehicles even if the suspension, revocation, or restriction applies only to the employee's personal vehicles.
- Promptly report traffic incidents, accidents, and vehicle damage, no matter how minor, to the proper manager.

#### S-12.1.2 Crossing Tracks

When crossing tracks with a motor vehicle or off-track equipment at non-public crossing locations:

- Approach as close to a right angle to the track as practical to allow for optimal viewing of potential approaching movements.
- Stop before crossing the track(s), unless the vehicle or off-track equipment is foul of a previously crossed track.
- Look for trains, engines, rail cars and on-track equipment movements approaching from either direction.
- Yield to trains, engines, rail cars and on-track equipment before proceeding across the track(s).

Exceptions:

- Stop is not required within mechanical servicing or repair buildings protected by Blue Signals when precautions have been taken to prevent on-track equipment movement in the building.
- Stop is not required within intermodal facilities unless designated by traffic signs (e.g., stop signs, roadway stop bars, track lights, track gates).

## S-12.2 All-Terrain Vehicles (ATVs)

The operation of ATVs by BNSF personnel requires the following:

- ATVs must be modified to limit maximum speed to 15 MPH or less.
- Operators must have completed an ATV Safety Training Course (including check ride), before operating an ATV.
- Employees must wear helmets that meet the DOT Standard 218 “Motorcycle Helmet” or BNSF approved bicycle helmet when operating ATVs. These DOT helmets and bicycle helmets are not to be worn as head protection in overhead hazard areas such as under craneways or when people are working above others. In these areas, hard hats are required.

ATV operators may wear DOT helmets or approved bicycle helmets in lieu of hard hats while coupling air hoses, changing brake shoes or coupling cars. Hard hats shall be worn for all other duties such as welding and when climbing under cars.

## S-12.3 Motorcycle Use

Do not use motorcycles to perform duties or to deadhead.

## S-12.4 Utility Vehicles

Complete a Utility Vehicle Safety Training Course before operating a utility vehicle.

When operating a utility vehicle:

- Wear seat belts where provided.
- Ensure that the utility vehicle is modified to limit maximum speed to 15 MPH or less.

## S-12.5 Seat Belts

Wear seat belts while operating or riding in equipment or vehicles that are equipped with them.

Seat belts must be worn according to the manufacturer’s guidelines posted in the vehicle or equipment. Lying down while wearing seat belts is prohibited.

Exception: Seat belts are not required when employees are operating vehicles while performing train inspections or coupling air hoses. When operating the vehicle in travel to and from such work activities, seat belts must be worn.

## S-12.6 Passengers

Transport passengers in vehicles equipped to transport passengers.

- Do not transport unauthorized persons in a company vehicle except in an emergency.
- Notify the driver before boarding any vehicle. Never get on or off of a moving vehicle except in an emergency.

## S-12.7 Maintenance/Inspections

Drivers assigned to vehicles and trailers, and their managers or foremen, are equally responsible for maintenance, cleanliness, and inspections to ensure that the equipment operates properly and safely and complies with federal motor carrier safety regulations.

Any defects found during inspections that might prevent the vehicle from operating safely must be corrected by a trained person before the vehicle is used. All other defects must be repaired as soon as possible.

## S-12.8 Backing

Position the vehicle, when possible, to avoid backup movement.

Before backing, inspect areas to the rear to ensure that no persons or obstructions are in the path of movement.

When backing vehicles other than automobiles and pickup trucks:

- Position someone near the back of the vehicle to guide movement, when available.
- Sound the horn three short blasts in vehicles not equipped with backup alarms.
- Stop if the person guiding the movement disappears from view.

## S-12.9 Parking

When parking vehicles:

- Place standard transmission in low gear with engine shut off.
- Place automatic transmission in Park.
- If parking on a grade set the emergency brake and take other precautions to prevent the vehicle from rolling unexpectedly.
- Remove the ignition key, close the windows, and lock the doors if leaving the parked vehicle unattended.

Exception: You may leave the engine of an unattended vehicle running, in cold weather, if you have a second set of keys.

### S-12.9.1 Fouling Tracks or Roadways

Except when necessary to perform duties, do not park vehicles or trailers where they foul tracks or roadways. If they do foul tracks or roadways, never leave them unattended without the proper protection.

## S-12.10 Work Under Vehicles or Trailers

Do not sit or lie underneath vehicles or trailers, except when inspecting or repairing them, and then make sure the:

- Brakes are set.
- Wheels are blocked.
- Engine is stopped.
- Proper support stands are in place.

Do not sit or lie under a raised vehicle or trailer supported only by a jack.

## S-12.11 Transporting Tools and Material

Properly secure tools, equipment, material, and freight. Do not transport hazardous materials, such as gasoline and solvents, in passenger compartments. Transport gasoline or other flammable material in a DOT-approved container. When transporting hazardous materials, follow federal and state placarding and shipping document regulations.

## S-12.12 Special Equipment Mounted on Vehicles or Trailers

Only qualified personnel may operate special equipment, such as winches, cranes, and hoists, mounted on vehicles or trailers.

When operating vehicles with special equipment:

- Inspect the equipment frequently.
- Do not exceed load limits.
- Make sure outriggers are in place.
- Secure the equipment in the proper position before moving the vehicle.
- Comply with the manufacturer's instructions.

## S-12.13 Trailers

### S-12.13.1 Required Equipment

Trailers must be equipped with:

- Safety chains (except fifth-wheel or gooseneck trailers).
- Required stop, tail, directional, and clearance lights.
- Electrical connectors that are compatible in size and design with those on the designated towing vehicle.

### S-12.13.2 Inspection

Before towing trailers, inspect equipment and material loaded on the trailer, and inspect the following to make sure they are operable:

- Tires.
- Brakes (if equipped).
- Hitches and locking devices.
- Safety chains (if equipped).
- Electrical connections and lights.

If the vehicle and trailer hitch are not compatible in size and design, or if locking devices are defective, do not tow the trailer.

## S-12.14 Commercial Motor Vehicles

BNSF Railway has adopted the safety regulations from the Department of Transportation (DOT) and the Federal Motor Carrier Safety Administration (FMCSA). These regulations apply to the operation of all commercial motor vehicles (CMVs).

A CMV is defined (CFR 49 Part 390.5) as any self-propelled or towed vehicle used on public highways in interstate commerce to transport passengers or property when:

- The vehicle has a gross vehicle weight (GVW) rating or gross combination weight rating of 10,001 or more pounds,
- The vehicle is designed to transport more than 15 passengers, including the vehicle operator, or
- The vehicle is used in the transportation of hazardous materials in a quantity requiring placarding under regulations issued by the Secretary under the Hazardous Materials Transportation Act.

### S-12.14.1 Commercial Motor Vehicle Driver Fitness

CMV drivers must possess and carry a valid driver's license for the class of vehicle they are operating and a valid medical card.

### **S-12.14.2 Commercial Motor Vehicles Transporting Hazardous Materials**

When transporting hazardous materials, drivers must follow federal and state placarding regulations, properly complete a Form 44 Standard and have the Emergency Response Guide (ERG) ready and available in the vehicle.

### **S-12.14.3 Commercial Motor Vehicle and Trailer Maintenance and Inspection**

Drivers are required to review the last vehicle inspection report required to be left in the vehicle by the previous driver and conduct a pre-trip inspection before driving the vehicle. This includes but is not limited to an inspection of:

- Lights and reflective devices.
- Tires.
- Brakes.
- Windshield and windshield wiper condition.
- Frame and suspension.
- Presence of any leaking fluids.

If a defect is found which would affect the safe operation of the vehicle, drivers must not drive the vehicle and arrange for repair of the defect as soon as possible.

At the completion of each day, drivers are required to conduct a post-trip inspection of the vehicle and document this inspection in writing on the Driver's Vehicle Inspection Report (DVIR) found on the driver's logbook. Drivers must note any defects found, sign the report and leave a copy on the front seat of the vehicle so that the next driver is aware of any defects found. A mechanic's sign-off is required on the DVIR when any defects are repaired.

### **S-12.14.4 Commercial Motor Vehicle Cargo Securement**

Drivers must secure cargo both inside and outside the vehicle. When an article of cargo is not blocked or positioned to prevent shifting, and the item is longer than 10 feet in length, then it must be secured by two tie downs for the first 10 feet of length, and one additional tie down for every 10 feet of length, or fraction beyond the first 10 feet.

When transporting cargo, drivers must stop and inspect the securement of the cargo within the first 50 miles of a trip and every 150 miles or every three hours (whichever comes first) after. If cargo has shifted or is blowing, spilling or leaking at any time during a trip, the driver must stop and adjust the cargo until it is once again secure.

### **S-12.14.5 Commercial Motor Vehicle Hours of Service**

Commercial motor vehicle drivers must not drive:

- More than 11 hours following 10 consecutive hours off duty.
- Beyond the 14th consecutive hour after coming on duty, following 10 consecutive hours off duty.
- After being on duty more than 70 hours in any 8 consecutive days.
- Until completing a 34 hour consecutive rest period that includes two periods from 1:00 a.m. – 5:00 a.m. after being on-duty a maximum of 70 hours.

All commercial motor vehicle drivers must properly complete an hours of service logbook and have it ready and available in the vehicle.

### S-12.14.6 Commercial Motor Vehicle Safe Operation

Drivers must obey all local, state and federal laws when driving. This includes, but is not limited to obeying and complying with all speed limits/restrictions, traffic signs and traffic signals.

### S-12.14.7 Commercial Motor Vehicle (CMV) Restrictions

While driving, the operator of a CMV must not:

- Use a hand-held mobile telephone for voice communication.
- Dial or answer a mobile telephone by pressing more than a single button.
- Manually enter or read text from an electronic device (e.g. emailing, instant messaging, accessing a Web page or perform any electronic text retrieval or entry).

## S-12.16 Operating Motorized Vehicles When Working Yard Tracks

This rule affects only those yard tracks located outside Mechanical Limits. All tracks being worked must have the appropriate blue signal protection applied before commencing work. Additional precautions may be warranted based on good safety practices and/or risk assessments. The following are minimum requirements.

When track clearances are 100 inches or less, plus the width of the vehicle, mounting or dismounting vehicles is to be done only between rail equipment (at the couplers) or at the end of rail equipment.

### Use of Motorized Vehicles in Yards

1. Motorized vehicles may be operated between tracks if the distance between the rails has a minimum of 100 inches of clearance plus the width of the vehicle.

**100"** Minimum required clearance between rails  
**+ 44"** Width of vehicle for this example (vehicle sizes will vary)  
**144" or 12'** Minimum distance between tracks to operate this vehicle

(Track measured from ball of rail to ball of rail)

2. If the clearance between the rails is at least 76 inches but less than 100 inches plus the width of the vehicle, blue signal protection must be provided on both tracks before a vehicle can be operated between the tracks.

3. No motorized vehicles may be operated between the tracks if the clearance between the rails is less than 76 inches plus the width of the vehicle. These are considered walking tracks and any inspection or repair on these tracks must be on foot.

Exception: If no on-track equipment is on the track adjacent to the track being worked, then motorized vehicles are allowed as long as blue signal protection is provided on both tracks.

**This page left blank intentionally.**

## S-13.0 On or Near Tracks, Locomotives and Rail Cars

### S-13.1 General Requirements

#### S-13.1.1 Going Between Cars or Locomotives

Going between or working on the end of rail equipment means an employee has placed all or part of their body where it could be struck by rail equipment if the equipment were to move.

Note: Operating the uncoupling lever is not considered going between rail equipment.

Before crew members go between or work on the end of rail equipment on any track, they must:

- Wait for movement to stop and slack to adjust.
- Ensure that all crew members have a clear understanding of the work to be performed.

Where engines may be working at both ends of a track or tracks, crews switching must have a clear understanding of movements to be made.

Unless another form of protection has been established, the following steps must be taken:

If a locomotive is not coupled to the rail equipment:

- A crew member must notify all members of the crew by radio or prescribed hand signals, that the crew member will be going between or working on the end of rail equipment on any track.
- Members of the notified crew must acknowledge by radio or prescribed hand signals, that they understand a crew member will be going between or working on the end of rail equipment.

If a locomotive is coupled to the rail equipment:

- After ensuring movement has stopped and slack has adjusted, the crew member must either announce by radio, "Going between," or give the prescribed hand signal.
- The crew member at the controls of the locomotive must fully apply the independent brakes, center the reverser, and then acknowledge the radio transmission or the hand signal:
  - If using a radio response, acknowledge, "Set and centered."
  - If using hand signals, sound one long whistle signal.
- The brakes must remain applied with the reverser centered or removed, and the locomotive must not be left unattended until the crew member requesting protection gives a radio or hand signal to move or announces by radio, "In the clear."

Prescribed hand signals to indicate Going Between Cars or Locomotives:

- By day:
  - Give a stop signal.
  - Raise arm farthest from the rail equipment straight above the head.
  - Point the arm nearest the rail equipment at a 90-degree angle toward the rail equipment.
- By night:
  - Give a stop signal.
  - With the arm extended forward parallel to the ground, move the light from left to right.

When crew members are going between or working on the end of equipment:

- Controls or devices (automatic brake valve, hand brake, brake cylinder release valve, etc.) that could affect movement of that equipment must not be operated without permission from the crew member(s) going between or working on the end of the equipment.
- Other rolling equipment must not strike, couple into or affect movement of the equipment the crew member(s) is working on the end of or going between.

When stepping from between rail equipment, be alert for movement on adjacent tracks or vehicles moving on the walkway or roadway.

Do not go between uncoupled locomotives or cars when clearance between them is less than 50 feet except when a train on main track or siding is unable to move safely and you have exhausted all practical means of complying with the 50 feet requirement.

In addition to complying with the other applicable portions of this rule, employees going between with less than 50 feet of separation must:

- Ensure equipment is secure against undesired movement.
- Keep at least one foot outside the rail, when practical.
- Refrain from placing all or part of their body directly between coupling devices unless necessary to complete the work.
- Obtain 50 feet of separation between the uncoupled locomotives or cars as soon as the equipment can be positioned practically and safely.

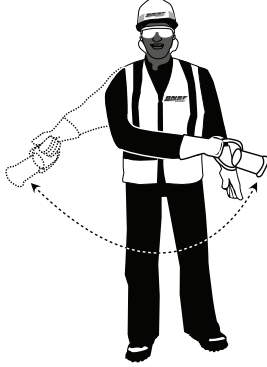

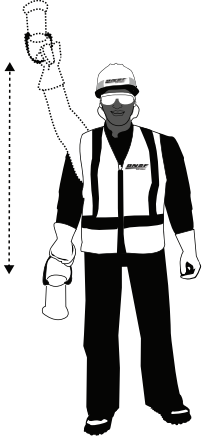

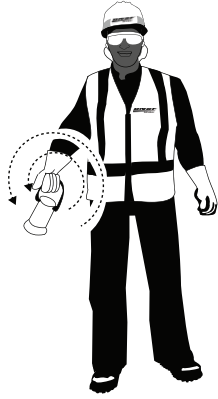

### **S-13.1.2 Signals**

Do not give the signal to move locomotives, cars, or other equipment until persons and equipment are clear of the movement.

- Keep signaling devices in working order and ready for use.
- Position yourself so that your signal can be clearly seen.
- Stop all movement if you lose visual contact with the person giving the signal, unless radio communication is being used instead of hand signals.
- Regard any break in radio communication as a stop signal.
- Use the appropriate signal for what you are communicating and signal clearly.
- Make sure everyone understands other signals you may use.

### Hand, Flag and Lantern Signals

The same signals apply for signals given by hand or flag.

 <p><b>SET AIR BRAKES:</b> Moved slowly with arm extended horizontally.</p>	 <p><b>STOP:</b> Swung horizontally at right angle to the track.</p>	 <p><b>GOING IN BETWEEN:</b> Arm raised straight up away from equipment. Arm at 90 degree angle pointing to equipment.</p>
 <p><b>PROCEED:</b> Raised and lowered vertically.</p>	 <p><b>RELEASE AIR BRAKES:</b> Held at arm's length above the head.</p>	 <p><b>BACK:</b> Swung in a circle at right angle to the track.</p>

### S-13.1.3 Tracks

#### A. Crossing Tracks

When crossing tracks:

- Do not cross within 25 feet of the end of standing equipment, unless “set and centered” protection has been established as outlined in S-13.1.1.
- Do not cross in front of approaching equipment, unless you are sufficiently ahead of the equipment to cross safely.

While within the limits of a designated mechanical facility, when crossing between standing equipment that is not under blue flag protection:

Employee may cross within 25 feet of standing equipment provided all of the following requirements are met:

- Speed limits for all equipment on the track is 5 MPH or less.
- Check for movement is made before crossing track.
- Distance is sufficient to allow safe passage should there be unexpected movement.
- Designated walkways are used, when available.

#### B. Stepping On Rails

Step over, not on:

- Rails.
- Frogs.
- Switches.
- Interlocking apparatus.
- Connections.

Watch for conditions that could interfere with footing.

#### C. Fouling Track

Do not walk between rails or foul the track except when duties require and safeguards are utilized. Use extra precaution during bad weather and when visibility is limited or impaired.

### S-13.1.4 Sitting or Standing

Comply with these restrictions for sitting or standing on equipment or structures:

- Do not sit on rails or track structures unless duties require.
- Do not stand, sit, or walk on top of or on the sides of any open top car such as gondola, hopper, ballast, or air dump cars.
- Do not sit on the steps of moving engines or cabooses.
- Do not sit or lie underneath or lean against standing equipment unless duties require, and only when proper safeguards are provided, such as blue signal protection.
- Do not stand or sit on engine or caboose handrails.

### S-13.1.5 Riding In or On Moving Equipment

Ride cars or equipment only if necessary and if you have determined that you can do so safely.

#### A. Determining Whether to Ride

When determining whether cars or equipment should be ridden, consider:

- Alternatives such as repositioning locomotive to pull instead of shove freight cars, vehicle transportation, repositioning of crew members or utilizing other employees to complete the task without having to ride moving equipment.
- Designs and configurations of freight cars and equipment that may make them unsuitable to ride.
- Selecting or repositioning other freight cars to ride.
- Your physical capabilities and limitations.
- The amount of slack in the train or switch cut.
- Applicable operating and safety rules.

When equipment will be ridden:

- Notify the engineer.
- Proceed only after the engineer has acknowledged that you are going to ride.
- Complete any couplings from the ground after the movement is stopped.

If track condition cannot clearly be observed because of debris (e.g. snow, ice, water, grain, mud, etc.) do not ride or knowingly allow others to ride on either side of equipment or engine exterior.

When snow and ice are observed building up on portion of tracks to be used, particularly at road crossings, locomotive(s) must precede movement on that portion of track before cars can be ridden into those tracks.

#### Close/No Clearance and Close Track Center Restrictions

Employees must not ride or knowingly allow others to ride the close/no clearance side of equipment at the location where close/no clearance exists, under any of the following conditions:

- Between a structure and a moving car or engine.
- Through gates or doorways. (Gates or doors must be secured in the open position).
- Into, out-of or within enclosed buildings. (Employees must precede the movement, if safe to do so, before entering enclosed buildings. Movements must only be made on that employee's signal within a building).
- When it cannot be visually determined that equipment on an adjacent track is in the clear or behind the clearance point.
- On industry tracks at locations where signs may be placed, advising of close/no clearance.
- At locations that have been identified by timetable or special instructions as having a close/no clearance condition.
- At locations that have been identified by timetable or special instructions as having close track centers unless that portion of adjacent track is known to be clear.

**B. Riding In or On Any Cars**

Comply with these requirements and restrictions for riding in or on moving equipment:

- Do not ride or knowingly allow others to ride on the end platform of other than tank cars as specified in this rule or end ladder of any freight car except to release or apply a hand brake during a gravity switch move. When determining if riding brake platform is necessary due to a gravity switch move, consider alternatives such as using another track with switches at each end to reposition locomotive or separating the locomotives when there are two or more in the locomotive consist. When you determine an alternative will not be used, the best practice is to ride on the brake platform of the last car if it is on the trailing end in the direction of movement.
- Ride only if hand holds and stirrup configuration allow for a firm grip and erect and normal body position.
- When riding equipment, maintain at least three-point contact with the equipment at all times.
- Do not ride on or knowingly allow others to ride any part of the coupler apparatus, center sill, side sill, end sill, or framework.
- Do not ride inside or knowingly allow others to ride inside a car loaded with lumber, pipe, or other materials susceptible to shifting upon slight impact. When a flat car load of this is involved, do not ride between the end of the adjacent car and the load.
- Protect against slack action. When duties require you to stand or move about, brace yourself and hold on firmly.

When moving from one freight car to another, after stopping, get down and walk to next car and then get on.

**C. Riding In or On Flat Cars**

When any type of flat car is involved:

- Ride the side of the flat car only if the car is equipped with a hand hold extending at least 18 inches above the deck of the car.
- Ride on the deck of an empty flat car, or on a TOFC/COFC flat car with an empty stanchion or table, only if you can:
  - Mount the car safely and kneel or sit as near as possible to the center of the car or the empty space.
  - Face the direction of movement.
  - Maintain a kneeling or sitting position before the equipment moves and until the equipment stops and the slack has adjusted.
- Do not walk or ride between trailers or containers loaded on flat cars.
- Do not place your hands or other parts of your body where trailers or bridge plates could move and cause injury when riding loaded TOFC/COFC flat cars.

**D. Riding On Drop-End Gondolas**

On a gondola equipped with drop ends, do not hold on to the end post, or sit or stand near the end door.

### E. Riding Tank Cars

When riding any type of tank car:

- Do not ride on any part of the coupler apparatus, center sill, side sill, end sill, or framework.
- Do not ride with both feet on the horizontal grab iron.
- Do not ride the middle ladder intended for man way access.

For trailing moves:

- Ride with both feet in the stirrup; or
- Ride with one foot in the stirrup and one foot on the horizontal grab iron; or
- Ride with one foot in the stirrup and one foot on the end platform.

If car to be ridden is the last car of the trailing move and is a tank car, you may ride the trailing end with both feet on the end platform positioned between outer edge of car and the car's wheel, facing direction of movement.

For shoving moves:

- Ride with both feet in the stirrup; or
- Ride with one foot in the stirrup and one foot on the horizontal grab iron; or
- Ride with one foot in the stirrup and one foot on the end platform.

### F. Riding Engines

When necessary to ride engine exterior:

- On platforms or walkways, do not extend any part of the body beyond the exterior edge on either side of the engine (for example, do not lean out to obtain fuel reading, inspect engine, etc.).
- Movement must not exceed 20 MPH.

## S-13.1.6 Opening and Closing Doors

Keep the front door of locomotives closed when speeds are greater than 15 MPH, except during switching operations. If the door is open, secure it to prevent unexpected closure.

Open and close doors on engines, cabooses, and other equipment by using the appropriate handle. Do not grab the edge of the door.

## S-13.1.8 Poling Cars

Do not use poles, ties, stakes, or other material to shove cars.

## S-13.1.9 Chocking Cars

When chocking cars:

- Wait until movement stops and the slack adjusts before placing the chock.
- Place the chock while standing to the side of the equipment.
- Keep fingers and hands clear of the wheel tread, top of the rail, and other pinch points.
- Use only a sound wooden chock, metal chock or chock made from plastic or composite material designed for chocking cars. Do not use a track spike.

Do not chock moving rail equipment, except in an emergency, or when the equipment is in a repair facility.

## S-13.2 Coupling/Uncoupling Rail Equipment

### S-13.2.1 Standing Clear

Stand clear during a coupling movement.

### S-13.2.2 Operating Uncoupling Lever

When operating the uncoupling lever on a rail car:

- Face the direction of the movement.
- Use your hand nearest the equipment to operate the lever.
- Watch for pinch points.
- Place your hand on the portion of the uncoupling lever designed as the handle.
- Use constant, steady pressure when operating the uncoupling lever.
- Do not run while operating the uncoupling lever.
- Do not use your feet to operate the uncoupling lever.

When operating the uncoupling lever on a locomotive:

- Do not operate the uncoupling lever of a moving locomotive from the ground.
- From the ground, use the lower uncoupling lever.
- From the locomotive step, use the upper uncoupling lever.
- Place your hand on the portion of the uncoupling lever designed as the handle.
- Watch for pinch points.
- Use constant, steady pressure when operating the uncoupling lever.
- Do not use your feet to operate the uncoupling lever.

### S-13.2.3 Adjusting Lift Pin (Lock Block)

Do not insert your fingers through the hole at the bottom of the coupler to help raise the lock block to open the knuckle. Always use the uncoupling lever designed for this purpose.

### S-13.2.4 Adjusting Mismatched Couplers

Do not adjust the coupler or knuckle of an approaching engine or car.

Do not attempt manual adjustment of couplers unless they move when you apply limited effort. If drawbar does not move with this limited effort, use an approved alignment device.

#### A. Adjusting Mismatched Couplers Without Using a Device

To adjust a mismatched coupler without using a device, follow this procedure:

1. Stop the movement.
2. Allow at least 50 feet of working room between the equipment and obtain positive confirmation of protection from train movement in all directions.
3. Wait for the movement to stop completely and for the slack to adjust and settle. (Be alert for unexpected movements from liquids sloshing in tank cars.)
4. Check for other equipment movements on the same track.

5. Adjust the coupler as follows:
  - Establish good footing and hand holds to avoid stumbling, and keep fingers and hands clear of pinch points.

Listen to what is going on around you. If you hear any equipment move, step clear immediately.

  - Make sure the knuckle is secured. (Keep your feet clear of the area beneath the knuckle unless the knuckle is secured.)
  - Stand to the side of the knuckle and lean against it. Do not lift.
  - Do not adjust the coupler by kicking it with your foot.
6. Step clear of the equipment (without fouling the adjacent track), then signal the employee controlling the engine to proceed with the coupling.

#### **B. Using a Lining Bar, Car Mover Pole, or Pinch Bar**

When using other devices, such as a lining bar, car mover pole, or pinch bar to adjust a mismatched coupler, follow this procedure:

1. Allow at least 50 feet of working room between the equipment and obtain positive confirmation of protection from train movement in all directions.
2. Wait for the movement to stop completely and for the slack to adjust and settle. (Do not overlook unexpected movements from liquids sloshing in tank cars.)
3. Check for other equipment movements on the same track.
4. Establish good footing to prevent stumbling.
5. Make sure the knuckle is secured.
6. When the couplers are properly aligned, open at least one knuckle, stand clear of the equipment, and proceed with the coupling.
7. Return the device to its assigned location.

#### **C. Using a Coupler Alignment Strap**

When using a coupler alignment strap to adjust a mismatched coupler, follow this procedure:

1. If necessary, apply enough hand brakes to secure the standing cars.
2. Separate the mismatched couplers by at least 50 feet, and obtain positive confirmation of protection from train movement in all directions. Then close both knuckles.
3. Keeping one foot outside the rail, use the alignment strap as follows:
  - a. Inspect the strap for defects or excessive wear.
  - b. Place one end of the strap around the knuckle of the standing car.
  - c. Place the other end of the strap on top of that same coupler.
  - d. Stand clear of the equipment.
4. Move the engine (or cars) toward the standing car, then stop the movement within three feet of the standing car.
5. After the movement stops, keep one foot outside the rail, place the other end of the strap around the second knuckle, and stand clear of the equipment.
6. Slowly separate the equipment to remove slack from the strap, then align the couplers. Stop the movement immediately when the alignment is complete to avoid breaking the strap.

7. Stop and get help if you have difficulty attaching or using the alignment strap. Do not attempt manual alignment, even with more than one person. If the drawbar will not move using normal procedures, bad-order the car and notify mechanical personnel.
8. Move the equipment close enough to provide slack in the strap, then stop the movement.
9. Keeping one foot outside the rail, remove the strap as follows:
  - a. Remove the strap from the knuckle.
  - b. Separate the equipment at least 50 feet apart.
  - c. Remove the strap from the other knuckle and open at least one knuckle.
  - d. Stand clear of the equipment and continue coupling.
10. After aligning the drawbar, return the alignment strap to its assigned location and resume normal train movements.

#### **D. Using a Knuckle-Mate**

When using a Knuckle-Mate to adjust a mismatched coupler, follow this procedure:

1. Separate the mismatched couplers by at least 50 feet, and obtain positive confirmation of protection from train movement in all directions. Then close the knuckle of the coupler or couplers that need adjustment.
2. Place the Knuckle-Mate over the top of the knuckle, with the pin securely in the hole at the top of the knuckle. (Adjust the pin by loosening the top levered nut.)
3. Place both hands on the handle.
4. Pull the handle steadily, avoiding unexpected movements of the coupler that could cause you to be overbalanced and fall.
5. When the couplers are properly aligned:
  - a. Remove the Knuckle-Mate.
  - b. Open at least one knuckle.
  - c. Stand clear of the equipment and continue coupling.
6. Return the Knuckle-Mate to its assigned location.

#### **E. Using a Come-Along**

1. Separate rolling equipment to at least 50 feet and obtain positive confirmation of protection from train movement in all directions.
2. Close the knuckle on the misaligned drawbar, and check for adequate lubrication by leaning on the coupler. If the coupler does not readily move, proceed with mechanically-assisted alignment.
3. Obtain come-along from storage location and visually inspect the chain and hook for excessive wear or damage. If wear or damage is determined as a result of this inspection, then contact the office responsible for come-a longs in that area for repair or replacement. Release the direction selector to the NEUTRAL position, and pull out enough chain to reach between attach points.
4. Inspect the alignment pin for defects such as worn spots, bent areas, or cracks. Do not use hardened steel pins or eye to reduce potential for injury when a hardened pin fails under load. Use a pin made of non-hardened steel so that it will bend rather than suddenly break if it fails under load. If no defects are found, insert the pin in the knuckle flag hole, and attach the come-along hook as described in the operating instructions provided with the come-along.

5. Secure a load-certified nylon choke to a rigid point of attachment near the corner of the car that is in the direction the drawbar is to be moved. Select this attachment point to provide the best angular advantage for using the come-along. The best attachment point location is at or slightly above the level of the first attachment point. Attach the second come-along hook to the nylon choke.
6. Pull any excess chain through the come-along, and turn the direction selector knob to the desired position for tightening the chain. Using smooth motions, tighten the come-along until the drawbar moves to centerline. Stop if any difficulty is encountered in moving the drawbar with the come-along, or if the alignment pin or attachment point begins to bend. At this point, bad-order the car and notify mechanical personnel to address the problem. Do not attempt manual alignment. Do not extend the come-along handle in any way.
7. Reverse the come-along mechanism to loosen and remove hooks, pins, and nylon choke. Replace these items in the come-along storage and carrying bag, and return the bag to its storage area.
8. Make sure the knuckles remain locked closed when the aligned coupler is joined to the train. Resume normal switching movements.

#### **F. Carry-Lite Drawbar Strap**

When available, use the Carry-Lite drawbar strap to:

- Remove broken assemblies from between the rails.
- Align drawbars so a coupling can be made.
- Replace the “bull chain” as a means of allowing rail cars with broken coupler assemblies to be moved to locations where repairs can be made.

### **S-13.2.5 Replacing Knuckles**

When replacing a coupler knuckle, unless other safeguards are provided, such as blue signal protection, follow this procedure:

1. Separate the equipment by at least 50 feet.
2. Make sure the equipment is stopped and secured.
3. Communicate with the engineer and other crew members to understand the work.
4. Make sure the knuckle pin is in place and open the knuckle while keeping feet clear of the area under the coupler.
5. Remove the pin and set it within easy reach.
6. Remove the knuckle from the coupler.
7. Dispose of the knuckle, holding it as close to the body as possible, where it will not become a tripping hazard.
8. Holding the uncoupling lever up, move the knuckle thrower back into the coupler recess as far as it will go.
9. Obtain the correct knuckle type.
10. Lift the knuckle carefully and place it into the coupler pocket.
11. Insert the knuckle pin into the pin hole, close the knuckle, and make sure it locks properly.

**S-13.2.6 Opening Knuckles**

When opening knuckles:

- Do not place your leg or foot where the knuckle might fall on it.
- Do not stand in front of the cushioned drawbar to adjust or open the knuckle.
- Check for broken or missing knuckle pins to prevent the knuckle from falling to the ground when it is opened.

If you remove the knuckle pin, replace it or provide a safeguard to prevent injury to others.

**S-13.3 Air Hoses and Angle Cocks**

Treat all angle cocks and air hoses as if they are under pressure.

**S-13.3.1 Connecting Air Hoses**

When connecting air hoses, keep one foot outside the rail whenever possible.

**S-13.3.2 Operating Angle Cocks**

When operating an angle cock:

1. Open the angle cock slowly, keeping legs and feet clear of the air hose coupling.
2. Listen for escaping air, which indicates a faulty coupling that could fly apart.
3. If you hear an air leak, close both angle cocks and make sure there is no pressure in the hoses before adjusting or repairing the leak.
4. Never kick, strike, or jostle pressurized hose couplings.
5. Before opening the angle cock to an uncoupled air hose:
  - a. Grasp the hose at the glad hand clear of the vent port.
  - b. Brace the glad hand firmly against your thigh just above the knee.
  - c. Turn your face away from the glad hand before opening the angle cock.

**S-13.3.3 Parting Hoses**

To part air brake train line hose connections or locomotive control connections by hand, close the angle or cutout cocks and grasp the hoses firmly, turning your face away from the coupling.

**S-13.3.4 Controlling Movement**

Do not open the angle cock on the leading end of a moving car or engine to control or stop movement.

**S-13.4 Crossing Over Rail Equipment****S-13.4.1 Crossing Through a Standing Train or Cut of Cars**

- When crossing through a standing train or cut of cars, cross only through cars equipped with crossover platforms and hand holds.
- Be prepared for sudden movement and maintain a firm grip.
- When no car is within sight distance with a continuous hand hold for crossing, you may cross over the ends of intermodal cars with empty stanchions or loaded intermodal cars when no trailer or container extends onto or over the crossover platform. Before crossing over, obtain positive confirmation that the car will not be moved and that the platform is sufficiently wide to allow walking across it in a safe manner.

### **S-13.4.2 Climbing Through Standing Coupled Cars**

When climbing through standing coupled cars:

- Do not step on the coupler or uncoupling lever.
- Do not place hands, feet, or other parts of the body on the sliding sill or between the coupler horn and end sill of the car.

### **S-13.4.3 Crossing Underneath Couplers or Standing Cars**

Cross under couplers or underneath standing cars or trains only if you are making repairs and when proper safeguards, such as blue signal protection, are provided.

### **S-13.4.4 Climbing Over Couplers or Under Moving Cars**

Do not climb over couplers of moving cars or underneath moving cars. When you must cross over moving equipment, use locomotive or caboose steps.

## **S-13.5 Getting On or Off Equipment**

(Includes Maintenance of Way equipment with steps, hand holds, or ladders.)

### **S-13.5.1 Getting On Equipment**

1. Standing Equipment
  - a. Face the equipment.
  - b. Visually inspect the handholds and ladder rungs before climbing on equipment and check for any defects, icy/slick and unusual conditions that may prevent ascending equipment safely.
  - c. Always mount equipment from the side, using the sill step and side ladder (where equipped).
  - d. Use a minimum of three-point contact.
  - e. Do not use the uncoupling lever as a step.
2. Moving Equipment (when it is authorized to get on moving equipment):
  - a. Face the equipment as it approaches and make sure:
    - The speed will allow you to get on the equipment safely.
    - Stirrups, hand holds, or handrails are not bent, loose, or missing.
    - Switch stands, close clearances, signals, and other items do not prevent you from getting on safely.
  - b. Firmly grasp the handrail or ladder rung.
  - c. Place your trailing foot on the trailing side of the step or stirrup.
  - d. Let the movement lift you off the ground, and then place your leading foot on the step or stirrup.
3. Do not get on a moving tank car, conventional flat car or a TOFC/COFC car.
4. To get on moving coupled equipment, board the leading or approaching end of the car or locomotive if possible. Get on a moving caboose at the rear steps.

### **S-13.5.2 Getting Off Equipment**

#### 1. Standing Equipment

- a. Face the equipment.
- b. Before getting off, determine that no obstructions or debris are where your feet will land. Be alert for switch stands, close clearances, uneven footing, signals, and other items that could prevent you from getting off safely.
- c. When getting off a caboose, walk down the steps, turn at the bottom step and face the car, then get off.
- d. Except in an emergency, do not jump to the ground from rail car and engine ladders, step platforms, or decks.

#### 2. Moving Equipment

In an emergency, or when it is authorized to get off moving equipment:

- a. Face the direction the equipment is moving.
- b. Get off with the trailing foot first to direct you away from the equipment.
- c. Avoid jumping to the ground from a rail car or an engine ladder, step platform, or deck.
- d. When getting off a caboose, walk down the rear steps, turn at the bottom step and face the car, then get off.

### **S-13.5.3 Getting On and Off Full Car Body Locomotives**

On locomotives that have a vertical side ladder access to the cab and are equipped with cab doors located on the sides of the cab, use the corner step well cab access to enter and exit the locomotive cab and car body areas in all cases except:

- Emergency exit from the locomotive.
- Entrance and exit from the locomotive while it is located at a service facility that has a raised ramp surface so that no more than one ladder tread must be used when entering or exiting the car or car body of the locomotive.
- Units that are accessible only by ladder.

Where other units are available, do not use a full car body locomotive as the lead locomotive.

### **S-13.5.4 Using Ladders**

When using a ladder to get on and off equipment:

- Use the side ladder, not the end ladder.
- Climb up and down the ladder by turning your feet at an angle and placing the ball of your foot on the ladder rung.

### **S-13.5.5 Loading and Unloading Luggage**

Do not throw or “swing” luggage onto a locomotive from the ground.

Load or unload luggage, grips without straps, ice chests, and other objects onto locomotives and cabooses before you get on or off. In doing so:

- Wait for a co-worker to safely board and get securely positioned on the deck or platform.
- Secure the item to be loaded against shifting or separating.
- Get a firm footing and use proper body mechanics/lifting techniques to pass the item to your co-worker.

Board or detrain carrying grips with shoulder straps by resting the strap on your shoulder and maintaining at least three-point contact and your balance.

### **S-13.5.6 Carrying Lanterns**

When practical or when there is a risk that the lantern could catch on objects, hold the lantern handle between the base of your thumb and index finger.

### **S-13.5.7 Mount and Dismount Locomotives**

Mount and dismount locomotives by utilizing the crossover ramps positioned in the stairwell of the locomotive. When obstacles on the running board, such as tools and equipment, open doors, etc. create a slip, trip or fall hazard, employees may mount or dismount the locomotive by climbing under the locomotive handrail, provided the following precautions are taken:

1. Never attempt to mount/dismount a locomotive underneath a handrail with tools or other objects in your hands. Maintain at least three points of contact.
2. Never climb over a handrail.
3. Before getting on or off a locomotive underneath a handrail, check the gap between the locomotive and the ramp walkway. If you feel that the gap is too wide for you to safely cross, do not proceed.
4. Choose a path that is uncluttered by tools or other materials.

## **S-13.6 Operating Hand Brakes**

### **S-13.6.1 Hand Brake Categories**

The three categories of hand brakes include:

- Vertical wheel (high- and low-mounted).
- Lever (ratchet).
- Horizontal wheel (staff).

When operating hand brakes, determine:

- Brake location (end- or side-mounted).
- Brake position (high or low, right side or left).
- Method of operation.

### **S-13.6.2 Hand Brakes on Moving Cars**

Except in an emergency or if making gravity switch moves where authorized, do not operate hand brakes on moving cars.

### **S-13.6.3 Position to Operate**

#### **A. End-Mounted with Brake Steps or Crossover Platform**

If the car has end-mounted brakes and a brake step or crossover platform:

1. Stand on the brake step or crossover platform to operate hand brakes.
2. Apply hand brakes by standing on the left side of the brake with your left foot on the ladder rung and your right foot on the brake platform.
3. Grasp the ladder rung or top handhold with your left hand and operate the brake with your right hand.

#### **B. Side-Mounted**

Operate side-mounted hand brakes from the ground if the brake mechanism is within easy reach and you can safely operate it without straining too much and risking injury.

#### **C. End-Mounted Without Brake Steps or Crossover Platform**

If the car has end-mounted hand brakes without brake steps or crossover platforms:

- Do not operate the hand brakes from the ground unless proper safeguards are provided, such as blue signal protection.
- To operate the hand brakes, stand on the car or on the ground at the side of the car.

#### **D. Horizontal Wheel or End-Mounted, Inward Facing**

Stand on the car to operate horizontal wheel (staff) hand brakes and end-mounted, inward facing hand brakes.

#### **E. Vertical wheel hand brakes may be operated without getting on the railcar if:**

- The car remains stationary.
- Both feet remain flat on the ground and outside the rail.
- Elbows are slightly bent during operation.
- One hand can hold onto the grab iron while the other hand is used to operate the brake wheel.

### **S-13.6.4 Use of Feet**

When operating hand brakes:

- Do not use your feet to operate the hand brake, except to manipulate the pawl on horizontal wheel (staff) brakes.
- Do not place your feet on any movable part of the car, such as the uncoupling lever or sliding sill.

### S-13.6.5 Movement from Side to End Ladder

When necessary to move from the side ladder to the end ladder to operate the hand brake, maintain at least three-point contact and hold on to the ladder firmly.

### S-13.6.6 Vertical Wheel

To apply a vertical wheel brake:

1. Place the release lever or pawl (if so equipped) in the ON position by reaching behind the brake wheel, not through the wheel spokes.
2. Turn the brake wheel clockwise to take up slack in the brake chain.
3. Watch for the brake chain to bunch or slip unexpectedly.
4. After the chain slack has been taken up, apply pressure to the brake wheel by turning it clockwise, using short, steady pulls without jerking.
5. To release hand brakes equipped with a release lever, rotate the lever clockwise to the OFF position, pushing firmly until the brake releases. If the quick release lever does not release the brake, operate the wheel with steady pressure. If the wheel does not easily release the brake, apply air to the car or get help. If the brakes still do not operate, bad-order the car.

With some older hand brakes, the brake wheel will spin when the brake releases. Keep fingers and hands clear.

6. To release hand brakes not equipped with a release lever (gradual release type), grip the wheel rim and turn the wheel counterclockwise until the brake releases.

### S-13.6.7 Lever or Ratchet Brake

To operate a lever or ratchet brake:

1. Apply the brake by placing the release lever or pawl in the ON position and pumping the brake lever. (On some styles, the release lever is automatically placed in the ON position when you pump the brake lever.)
2. After the chain slack has been taken up, apply steady pressure on the lever as necessary, but do not jerk it.
3. Operate low-mount lever brakes on standing cars with your left side nearest to the car, where possible. (These brakes are mounted to the frame of the car at or below the deck level.)
4. Before releasing lever brakes, inspect the lever stop on the housing. Do not operate the brake if:
  - The stop is excessively worn or missing, or
  - The mechanism allows the lever to bypass its normal stop position.

If operated under these circumstances, the brake lever could fly around forcefully when the brake is released.

5. Release the hand brake by rotating the release lever clockwise, pushing firmly until the brake releases.

### S-13.6.8 Horizontal Wheel or Staff Brake

To operate the horizontal wheel or staff brake:

1. Make sure the brake wheel and shaft are fully raised and locked. (Some brakes have a drop-shaft movement, allowing the brake wheel to lower to the car floor.)
2. If the wheel and staff are in the lowered position, use both hands and lift the brake wheel until the shaft support moves into place under the end of the shaft and locks the wheel shaft in the raised position.
3. Apply the brake as follows:
  - a. If the hand brake has a pawl, engage the pawl in the ratchet with your foot.
  - b. Grasp the brake wheel rim with both hands, keeping your thumbs on the outside of the wheel.
  - c. Turn the wheel clockwise until enough force is applied. Do not jerk the brake wheel, but apply steady pressure, keeping alert in case the chain bunches or slips.
4. Release the brake as follows:
  - a. If the brake staff has a pawl:
    - Using both hands, turn the brake wheel clockwise enough to release the pawl with your foot.
    - Release your grip on the wheel.
    - As the brake wheel spins counterclockwise, keep your hands, body, and clothing clear.
  - b. If the brake staff does not have a pawl, turn the wheel counterclockwise until the brake releases.
5. If necessary, lower the hand brake wheel shaft as follows:
  - a. Make sure the car will not be moved, and step (on the ground) around the end of the car.
  - b. Lift the hand brake shaft with one hand, enough to take the weight of the shaft off the shaft support.
  - c. While holding the brake wheel shaft in the above position with one hand, use the other hand to move the shaft support from under the end of the shaft.
  - d. Using both hands, slowly lower the brake wheel, being careful to avoid pinch points.

### S-13.6.9 Brake Stick

When using a brake stick:

- All crew members must comply with the requirements of Safety Rule S-13.1.1 if all or part of the body is placed where it could be struck by rail equipment if the equipment were to move.
- Never walk backwards.
- Work from a location to the outside rather than between adjacent track when possible.
- Keep the brake stick, including the handle, clear of moving equipment.
- Never operate a quick release brake by the handle.

- Be sure the indicator ring is flush with the bottom of the locking mechanism to ensure the brake stick is both aligned with an extension notch and fully engaged.
- Never place the butt of the brake stick against your body. Keep it at the side to ensure, in the unlikely event of a kick back, the end will not strike you.
- Pass the brake stick through equipment rather than climb or cross equipment with the brake stick in your hand.
- The brake stick may be hung from the ladder or structure of a car to transport.
- Place the hook to the outside of the hand brake wheel not inside between the wheel and the car to avoid the hook from accidentally being caught.

## S-13.7 Operating Switches and Derails

Only authorized and trained individuals may operate switches or derails.

The employee handling the switch or derail is responsible for the position of the switch or derail in use. The employee must not allow movement to foul an adjacent track until the hand-operated switch is properly lined.

Do not operate switch that is tagged. If the switch is spiked, do not remove the spike unless authorized by the same craft or group that placed it.

Employees handling switches and derails must make sure:

- The switches and derails are properly lined for the intended route.
- The points fit properly and the target, if so equipped, corresponds with the switch's position.
- When the operating lever is equipped with a latch, they do not step on the latch to release the lever except when throwing the switch.
- After locking a switch or derail, they test the lock to ensure it is secured.
- The switch is not operated while equipment is fouling, standing on, or moving over the switch.
- When equipment has entered a track, the switch to that track is not lined away until the equipment has passed the clearance point of the track.

When possible, crew members on the engine must see that the switches and derails near the engine are properly lined.

### S-13.7.1 Checking for Damage and Obstructions

#### A. General Requirements

Switches have different operating characteristics that could change because of weather, temperature, and maintenance. Before attempting to operate a switch:

1. Stop the car, locomotive, or other on-track equipment at least 50 feet from the switch stand to be lined, when possible.
2. Look in both directions and watch for moving equipment on adjacent tracks.
3. Visually inspect the switch to make sure it is not damaged, locked, or spiked.
4. Verify that switch points are not fouled by ballast, ice, snow, or other material.
5. Remove foreign material from between the switch point and stock rail using a broom, stick, or similar object. Do not use your hand or foot.

When handling a switch or derail, keep hands and feet clear to avoid being struck or caught by the switch lever handle. Do not strain your body and risk physical injury.

**B. Defective Switches**

Remove from service immediately any switch that is defective, hard to throw, or in need of maintenance, until it can be inspected and repaired.

Label the defective switch as follows:

- Identify the switch's exact location and problem and report them to the dispatcher or proper authority.
- Attach an out-of-service tag to the switch.
- Do not use the switch until it has been inspected, repaired, and the out-of-service tag removed.

**S-13.7.2 Operating Ground Throw or “Flop Over” Switch**

1. Check for conditions that may cause loss of footing as the handle is moved.
2. Be prepared for the lever to suddenly operate easily or stiffly.
3. If equipped, release the foot latch.
4. Be alert for a switch under compression that could fly up when released from the latch or keeper. Keep your body clear of the switch handle's path of movement.
5. Keep your back in proper alignment when operating a switch.
6. Operate switch using either the One-Handed or Two-Handed method to operate the switch. If the switch handle becomes difficult to operate at any time, follow procedures for taking the switch out of service.

**One-Handed Method**

- a. Place one hand on the handle and the other on your thigh for support.
- b. Slowly pull the handle up using your legs as much as possible. Keep handle between your shoulders and parallel to the switch handle's path of travel or facing the directions of travel.
- c. Continue to use one hand to move the handle over the top of the switch. If resistance is sensed at any time, use two hands to complete the switch movement.

**Two-Handed Method**

- a. Place two hands at the end of the switch handle.
  - b. Slowly pull the handle up using your legs as much as possible. Keep handle between your shoulders and parallel to the switch handle's path of travel or facing the directions of travel.
  - c. As the switch handle is moved, reposition your feet as needed to avoid a twisted or awkward body position.
7. Shift your position so that your body is over the lever on its downward movement.

8. Push the lever handle to the latched position as follows:
  - a. Use slow, even pressure.
  - b. Do not jerk or use unnecessary force.
  - c. Keep hands and legs firmly braced and clear of the operating lever.
  - d. One foot may be used to finish the last few inches of handle movement on pavement (submarine) switches and ground throw switches. One foot must remain on the ground for balance when using this method. Avoid using your feet to push the lever arm down during wet, ice, or snow conditions, or if oil, grease, or other such contaminants are present.
9. Make sure the switch lever handle is latched.

### **S-13.7.3 Operating High Stand/Low Stand Switch**

1. Establish a firm stance and check for conditions that could interfere with footing.
2. Stay clear of the path of travel of the switch handle, it may be under compression and may swing around when released from the keeper slot.
3. Use two-hands to lift the lever handle out of the keeper slot.
4. Be alert for a switch under compression that could fly up when released from the latch or keeper. Keep your body clear of the switch handle's path of movement.
5. Be prepared for the switch to suddenly operate easily or stiffly.
6. Operate switch using Two-Hand or Mast-Support Method.

#### **Two-Hand Method**

- a. Stand with your shoulders parallel to the switch handle and place both hands near the end of the handle.
- b. Lift up the switch handle, keeping your back in proper alignment and your legs slightly bent.
- c. Slowly pull the handle through the line of travel.
- d. Fully seat the handle in the keeper slot when the switch is in the desired position.
- e. The use of your feet in the operation of this type of switch is not allowed.

#### **Mast-Support Method**

- a. Place one hand on the mast and the other hand on the end of the handle.
- b. Stand parallel to the handle and slowly pull the handle through the line of travel.
7. As the switch handle is moved, reposition your feet as needed to avoid a twisted or awkward body position. Focus on using leg muscles, not back muscles.
8. Do not jerk the handle or use unnecessary force.
9. Fully seat the handle in the keeper slot when the switch is in the desired position.
10. The use of your feet in the operation of this type of switch is not allowed.

**S-13.7.4 Operating Switch Point Locks**

When working with switches equipped with switch point locks (so designated by yellow handle):

1. Know the difference between the two basic types of switch point locks.
2. Remove the padlock from the switch point lock.
3. Use your foot only to depress the pedal, which places both types of lock under spring tension.
4. Snap the switch point lock into locking position by returning the switch to the normal position. Inspect to assure the locking position before putting your hands near the switch point lock to replace the padlock. If the switch point lock fails to snap into locking position, reopen the switch and repeat the process.
5. Do not attempt to pull up the pedal by hand or other means. Contact the train dispatcher and report the switch point lock defective. Tag out the switch.

Repair or correct defective switch point locks only if you are a qualified Maintenance of Way employee.

**S-13.7.5 Switch Heaters**

When working around burning switch heaters avoid contact with heaters or switch rails.

**S-13.7.6 Switches Equipped with Locks, Hooks or Latches**

When not in use, switches must be locked, hooked or latched if so equipped. Before making movements in either direction over these switches, make sure the switch is latched and/or secured by placing the switch lock or hook in the hasp. (Note: Craft specific locks used as effective locking devices for blue signal protection are not considered switch locks in the application of this rule.)

**S-13.7.7 Hand-Operated Crossover Switches**

When not in use, hand-operated crossover switches not connected to a main track or siding must be left in corresponding positions (both switches lined for crossover movement or both switches lined for other than crossover movement). Switches of a crossover connected to a main track or siding must be left for other than crossover movement.

A hand-operated crossover switch may be left non-corresponding when:

- Used to provide blue signal protection.
- Used to provide inaccessible track protection for MW employees.
- Performing maintenance, testing, or inspection of crossover switches in signaled territory.
- One crew is using both tracks connected by the crossover during continuous switching operations.

Both switches of a crossover must be properly lined before equipment begins a crossover movement. A crossover movement must be completed before either switch is restored to the proper position.

## S-13.8 Fusees

### S-13.8.1 Storing Fusees

Store fusees as follows:

- Store them in approved metal containers in motor vehicles and other designated equipment.
- Store them in flagging kits or racks in engines and cabooses.
- Do not leave them on floors, seats, or walkways.
- Keep them away from high temperatures, open flames, combustibles, and locations where they may become wet.
- Store them, when possible, in a locked compartment not intended for passenger occupancy where unauthorized persons cannot obtain them.
- At fixed facilities, keep fusees in original shipping containers, and store in a flammable storage cabinet meeting NFPA standards. Do not store other flammable or nonflammable material in the same cabinet. Store the minimum amount needed, but no more than a 60-day supply.

### S-13.8.2 Disposing of Damaged Fusees

Do not use fusees that have been soaked in water, oil, or otherwise damaged. Dispose of them appropriately.

### S-13.8.4 Lighting and Handling a Burning Fusee

To light and handle a burning fusee:

1. Grasp the fusee near its base.
2. Remove the plastic top or pull the tape over the top to expose the scratch surface on the end of the cap.
3. Twist the cap off the fusee head.

When igniting a fusee, turn your face away and expect hot sparks to spray in all directions.
4. Hold the fusee in one hand and the cap with the exposed scratch surface in the other.
5. Strike the igniter button on the fusee against the scratch surface of the cap, while holding the cap still. Strike away from the body.
6. If you will drop the fusee from a moving train:
  - After the fusee ignites, continue to hold it at arm's length with the burning end away from your body for at least 5 seconds, but no more than 10 seconds.
  - Be careful to prevent the hot, melting slag from falling on you if you hold the fusee for longer than 5 seconds.
  - Do not drop the fusee too soon, or the igniter may go out and the fusee will not remain lighted.

### **S-13.8.5 Placing Fusees**

Do not place a fusee where the fire may spread to:

- Platforms.
- Bridges.
- Buildings.
- Combustible surfaces of road crossings.

Be careful when placing a fusee near trees, brush, or grass along the right of way.

### **S-13.8.6 Giving Signals with Fusees**

When giving hand signals with the fusee:

- Point the burning end down and away from yourself and others.
- Never hold the fusee near the flame.
- Avoid breathing the vapors and gases produced by the burning fusee.
- Do not look directly at the flame.

### **S-13.8.7 Extinguishing Fusees**

To extinguish the fusee before it burns out, use one of the following methods:

- Gently strike the burning end over the edge of a rail or over a heavy metal object; strike three or four times to separate the burning compound from the rest of the fusee.
- Bury the burning end in sand or dirt.

Do not touch the burning melting material on the fusee.

## S-14.0 On-Track Machines and Vehicles

(Includes motor cars, push cars, and hy-rail vehicles.)

### S-14.1 Riding On Machines

Ride on machines only if you are the machine operator or are authorized by the manager in charge.

When riding on an on-track machine:

- Notify the machine operator before boarding.
- Sit where operator indicates, or, if directed to stand, hold on firmly at all times and maintain three points of contact.
- Watch for obstructions, approaching trains, and vehicle traffic at road crossings giving the right of way to all vehicle traffic. Inform the operator of hazards.
- Do not operate on-track equipment when a train is passing on an adjacent track, if the equipment will foul the adjacent track.
- Do not work between the adjacent tracks while a train is passing.

Do not ride on a flat car loaded with machines while the car is being moved in the train. Operators may ride in a crane cab when duties require.

#### S-14.1.1 Warning Devices

When operating on-track machines:

- Sound whistles, horns, or other warning devices to alert others of approaching trains.
- Do not rely on others to warn you of moving equipment, except where designated lookouts are provided.

#### S-14.1.2 Seat Belts

Wear seat belts while operating or riding in equipment or vehicles that are equipped with them.

### S-14.2 Working On or About Equipment and Machines

Operate equipment only if you are authorized and trained. Operators are responsible for machine safety and machine maintenance.

When working on or about equipment and machines:

- Read and understand the machine's operating manual before using the equipment.
- Use lockout/tagout procedures.
- Lower all suspended loads and attachments before leaving the machine.
- Do not sit or lie underneath a machine, except when inspecting or repairing it.
- Do not overload equipment.
- Be aware of power lines overhead and underground.
- Secure unattended equipment from movement and theft.

Never place yourself under a raised machine supported only by a jack.

### **S-14.3 Moving Cars at Shops or Repair Tracks**

- Visually inspect the equipment to make sure it is safe to move.
- When operating equipment used to move cars, turn on lights and activate warning devices, if so equipped.
- Make sure all personnel are clear of movement.
- Activate movement warning device(s) in the area if available.
- Make sure that the path of travel is clear. Personnel must protect the point of movement.
- Give clear and proper signals. When a radio is used instead of hand signals follow the requirements described in Rule S-23.13.
- When moving equipment, whether coupled or uncoupled, you must maintain control of the equipment throughout the entire movement.
- Do not exceed 5 MPH during move.

Cars must not be shoved until the operator knows who is protecting the movement and how protection will be provided. The employee providing protection for the movement shall not engage in any task unrelated to the movement. When cars are shoved, an employee must be in position and provide visual protection.

### **S-14.5 Hearing Protection**

Wear approved hearing protection when operating or working within 20 feet of machines with hearing protection warning labels or decals, and other machines covered in special instructions.

### **S-14.8 Operating Track Equipment Indoors**

Do not operate track equipment indoors unless exhaust is directly discharged outdoors via ducting.

## S-15.0 Oxygen and Fuel Gas

### S-15.1 Storing Gas Cylinders

Follow these requirements for storing gas cylinders:

- Store oxygen, acetylene, and fuel gas cylinders with the valve end up.
- When oxygen, acetylene, and fuel gas cylinders are not in use or when they are empty, close their valves tightly and put the protective cap in place.
- Secure gas cylinders to protect them from damage. No more than three cylinders may be chained together.
- Store gas cylinders in a well-ventilated area away from elevators, stairs, and gangways.
- Separate oxygen cylinders from acetylene and other fuel gas cylinders as follows:
  - Separate them by at least 20 feet, or
  - Separate them with a noncombustible barrier at least 5 feet high with a fire resistance rating of at least a 1/2 hour.

Exception: This does not apply to cylinders in use or ready for immediate use. Secure these cylinders in suitable racks or cabinets on trucks or in fixed locations.

- Store oxygen cylinders at least 20 feet away from flammable material, especially oil, grease, paint, or any substance that could cause or intensify a fire. Do not store, use in, or convey oxygen through a paint shop or any paint storehouse.
- Do not store gas cylinders near heat sources such as furnaces or boilers. In locations with extreme temperatures, screen gas cylinders stored outdoors from the sun.
- Store empty and full gas cylinders separately. Mark empty cylinders as EMPTY or MT.

### S-15.2 Testing for and Handling Leaks

#### S-15.2.1 Testing for Leaks

When testing for leaks, use soapy water with a nonfat base. Do not use an open flame.

#### S-15.2.2 Handling Leaks

If a welding gas cylinder is leaking:

1. Remove the cylinder to an open area away from possible ignition sources.
2. Allow the cylinder to drain completely.
3. Close the valve.
4. Tag the cylinder indicating the defect.
5. Return the cylinder to the supplier.

### S-15.3 Mixing Gases

Do not mix gases in a cylinder or refill a cylinder.

## S-15.4 Handling and Transporting Gas Cylinders

When handling or transporting gas cylinders:

- Do not handle oxygen cylinders with oily or greasy hands or gloves.
- Securely chain or clamp gas cylinders with valve ends up.
- Valve protection caps, where cylinder is designed to accept a cap, shall always be in place, hand-tight, except when cylinders are in use or connected for use.
- Do not remove or change numbers or marks stamped on gas cylinders.
- Gas cylinders may be difficult to carry by hand because of their shape, smooth surface, and weight. Gas cylinders may be rolled on their bottom edge but never dragged.
- Follow these lifting restrictions:
  - Do not lift a compressed gas cylinder with an electromagnet.
  - Do not lift a gas cylinder by its valve cap.
  - When using a crane or derrick to lift a gas cylinder, secure it to the crane hook with a cradle, suitable platform or basket/tote.
- Contact the gas supplier when you are unsure how to properly handle a compressed gas cylinder or its contents.

When transporting compressed gas cylinders in a company vehicle on other than BNSF property:

- Secure cylinders tightly with a chain, strap or equivalent device, and close cylinder valve.
- Always secure cylinders in a closed compartment when available. Cylinders must not be placed or transported in a passenger-carrying compartment.

## S-15.5 Changing Gas Cylinders

Before changing or disconnecting a gas cylinder, close the cylinder valve and individually drain hoses to remove any gas mixture. Do not open a cylinder valve unless the cylinder is secured.

## **S-16.0 Power Tools and Machinery**

### **S-16.1 Authorized Employees**

Operate power tools and machinery only if you are authorized to do so.

### **S-16.2 Inspection and Use**

Inspect tools and equipment for defects before and during use, repairing or removing from service those that fail inspection. Promptly tag and report to your supervisor or person in charge any defect. If necessary, guard the hazard.

### **S-16.3 Insulation/Grounding**

Frequently inspect the power cord insulation and connections on electric power tools, and maintain them to prevent shorts and faults. Unless the power tool is double-insulated, make sure it has three conductor cords, one of which grounds the tool frame when connected to an adequate ground. Do not remove the grounding prong from the plug.

### **S-16.4 Power Source**

Disconnect the power source before cleaning, repairing, adjusting, or replacing accessories on electric and pneumatic power tools. Where required, follow lockout/tagout procedures.

Exception: Spring-loaded quick-disconnect sockets are exempt.

### **S-16.5 Storage/Handling of Abrasive Disks and Wheels**

Store abrasive disks and wheels in a dry area protected from extreme temperature changes, especially in below-freezing temperatures.

Handle abrasive stones carefully to prevent dropping or bumping them. Always inspect disks before use.

### **S-16.6 Floor Area/Aisles**

Keep the floor area around shop machinery free from holes and irregularities. Designate aisles with railings, safety chains, paint, or other markings.

### **S-16.7 Safety Guards**

Do not operate power tools, machinery, or appliances without required safety guards on belts, shafts, gears, and other moving parts.

### **S-16.9 Pneumatic Tool Use**

#### **S-16.9.1 Air Valve**

Close the air valve at the supply source and relieve the line pressure on pneumatic tools that will not be used for a long time.

#### **S-16.9.2 Hose Connections**

Make sure air hose connections are secure. Unless the connections are equipped with quick disconnects, do the following before uncoupling them:

- Close the air valve.
- Relieve the line pressure.
- Use whip stops.

Do not use wire in air or hydraulic couplings in place of clip pins. Do not use hoses on hydraulic or pneumatic tools for hoisting or lowering.

### **S-16.9.3 Spindle Speed**

Regularly check pneumatic grinding tools for proper spindle speed, especially if the tools have been dropped.

### **S-16.10 Set Screws**

Use safety set screws in all revolving spindles or shafts unless a collar protects them.

Make sure all set screws or keys are flush or countersunk. Do not use nails or wire to hold the sockets in place.

### **S-16.11 Laying Tools Down**

Stop the motor before laying down pneumatic, electric, or other power tools. Place the tool so it will not start accidentally.

### **S-16.12 Surfaces**

Do not place electric power tools on wet surfaces or in loose dirt.

### **S-16.13 Falling Tools**

If a tool or other object falls to the bed of a machine, stop the machine before removing the tool.

### **S-16.16 Chain Saw Use**

Operate a chain saw only if you are authorized to do so.

Inspect the saw before using it to ensure:

- The handles and guards are in place and tight.
- The controls function properly.
- The muffler is operating properly.
- The cutting chain is properly adjusted.
- The bar is not worn or burnt, especially at the tip.

Before starting the saw:

- Alert others of flying debris.
- Inspect for conditions that could interfere with your footing and safe operation.
- Clear away brush.

When using the saw:

- Do not use the saw to cut directly overhead or far enough away that you cannot safely grip the saw.
- Avoid contact between the saw tip and objects that could cause the saw to kick upward.

### **S-16.17 Lockout/Tagout of Machinery**

When machinery is being repaired, cleaned, or adjusted, ensure that the control switch or power source is locked in the OFF position and tagged. The employee working with the machine must keep the key.

## S-16.18 Grinding Machine Use

Use the grinder only for tasks for which it was designed.

### S-16.18.1 Inspecting Grinding Wheels

Inspect grinding wheels as follows:

- Inspect each wheel immediately after unpacking it from the shipping container and again just before mounting it on the grinder.
- Ring-test each wheel and inspect it for surface cracks, chips, or other defects, before mounting grinding wheels.
- Make sure protective guards are in place, secured, and properly aligned. Make sure the tool rest and tongue guard adjustment is not more than 1/8 inch from the wheel.
- Make sure the frame is securely mounted with no vibrations, and the wheel face is well-lighted and dressed evenly. The grinder RPM must be plainly labeled and not exceed the RPM rating of the wheel.
- Make sure a competent employee dresses and trues the wheels.

### S-16.18.2 Mounting Grinding Wheels

When mounting grinding wheels, make sure:

- The wheel is the appropriate type and size for the machine on which it will be used.
- The wheel fits freely on the spindle and remains free under all grinding conditions.
- The contact surfaces of wheels, blotters, and flanges are flat and free of foreign matter.
- The blotters or flange facings of compressible material cover the entire contact area of the wheel flanges.
- The spindle and nut are tightened enough to drive the wheel and prevent slipping.
- The flanges are equal in size and are the correct diameter for at least 1/3 of the wheel diameter. For cut-off wheels, flanges will be at least 1/4 of the wheel diameter.

### S-16.18.3 Operating Grinding Wheels

When operating grinding wheels:

- Run new wheels at full operating speed for at least 1 minute before applying work. (Most defective wheels break when first started.) During this time, do not stand in the direct line of the rotating wheel.
- Operate wheels at the manufacturer's recommended speed.
- Do not drop, bump, roll, or handle grinding wheels carelessly.
- Protect grinding wheels from oil, grease, water, or other liquids, and from freezing temperatures or conditions that cause surface condensation.
- Do not perform grinding operations on the sides of wheels, except on wheels designed for side-face grinding.
- Do not grind nonferrous materials on wheels not specified for that purpose.
- When the wheel is cold, apply grinding force gradually and evenly to prevent thermal shock, which could break the wheel. Avoid forcing it and causing glazing or breakage.

### **S-16.18.4 Operating Portable Grinders**

When operating a portable grinder:

- Be careful to avoid damaging the abrasive wheel.
- Do not leave or lay the portable grinder down while it is running.
- Use a protective shield or screen to protect others from sparks and flying debris.

### **S-16.19 Wire Brush Wheels**

When using wire brush wheels:

- Follow the manufacturer's recommended wheel speed.
- Make sure the hood is adjustable and encloses the wheel as completely as the work allows. The hood should cover the exposed arbor ends. If not, install a smooth-headed nut.
- Do not use wire brush wheels to remove ACM from surfaces, such as gaskets.

### **S-16.20 Band Saws**

When using a band saw:

- Make sure the length of blade exposed is no longer than the thickness of the stock being cut plus 3/8 inch.
- Feed the stock gradually and steadily.
- Make sure the blade is not twisted or crowded.

### **S-16.21 Other Metal or Woodworking Machines**

When using other metal or woodworking machines:

- When installing the machine, place its front end slightly higher than its rear to cause the cutting head to return gently to the starting position when the operator releases it.
- Stand to one side and not directly in back of the material being fed for saws where kickback is possible.
- Use a push block to feed narrow material through a circular or band saw.
- Do not reach over a circular saw.
- Do not operate circular rip saws with missing or broken hoods, spreaders, or kickback devices.
- Provide an adjustable stop to prevent the blade from traveling beyond the point necessary to complete the cut in repetitive operations.
- Do not join short pieces of stock. The length of the pieces joined should be at least four times the width of the bed opening.
- Do not adjust either half of the joiner table horizontally to make the clearance between the edge of the table and the revolving knife more than 1/8 inch.
- Do not lower dead plates on planers while material is in the machine and the machine is running.
- Use hold-downs/push blocks whenever joining stock that is narrower than 3 inches.

### **S-16.22 Clean Up**

#### **S-16.22.1 Removing Chips**

Do not use your hands to remove chips or shavings from a drill press or other machine. Use a brush, vacuum equipment, or special tools designed for that purpose.

### **S-16.22.2 Use of Compressed Air/Gas**

1. When cleaning equipment, use an air nozzle that meets OSHA requirements—less than 30 psi with effective chip guarding.
2. Do not use compressed air, oxygen or other pressurized gas to:
  - Clean equipment where lead, silica-containing dust or asbestos may have accumulated.
  - Blow dust or dirt from your body or clothing. Do not place the air nozzle against your body or purposely inhale compressed gas.
  - Clean shop areas.

### **S-16.23 On/Off Switch**

Protect on/off switches to prevent the machine or equipment from being unintentionally energized.

### **S-16.25 Hydraulic Tools**

- Inspect, maintain, and use hydraulic tools in accordance with manufacturer recommendations.
- Visually inspect hydraulic tools, hoses and connectors before daily use.
  - Pull back any protective hose sleeves to help ensure a thorough inspection.
  - Defective equipment is to be conspicuously labeled as defective, and immediately removed from service.
- Comply with lockout/tagout procedures during the inspection, service and maintenance of hydraulic tools.
- Do not handle pressurized hoses with a bare or gloved hand. Use an appropriate tool.
- Do not place pressurized hoses against the body.
- Manage hoses during set-up and use, so as to not create a tripping hazard, or allow hose contact with sharp edges or hot surfaces.

**This page left blank intentionally.**

## S-17.0 Rigging, Cranes, and Hoists

Observe the manufacturer's instructions for operation and maintenance of cranes. Be familiar with safe hoisting capacities and do not exceed the load chart ratings.

### S-17.1 Rigging

When rigging for an overhead lift, make sure that all slings, wire ropes, and other hardware are approved by the manufacturer for overhead lifting. If you are the rigger, you must verify that the Working Load Limit (WLL) of each component involved in a lift is equal to or greater than the stress it will be subjected to during the lift. When determining sling capacity, consider that the stress on a sling varies with the angle of its legs.

Store slings in a clean, dry place. Store synthetic slings away from direct sunlight.

Cable clamps are not recommended for overhead lifting. When such use is necessary, use only new clamps applied and torqued to the proper specifications. Check the cable clamp torque regularly to ensure that vibration does not loosen the clamps.

#### S-17.1.1 Inspection Requirements

Inspect all new or repaired ropes, slings, and other rigging hardware upon initial receipt, daily before use, and whenever you suspect damage.

#### S-17.1.2 Identification Tags

Slings must have a durable identification tag that states the following:

- All slings - Manufacturer's name and Working Load Limit (WLL).
- Cable and chain slings - Size.
- Chain slings - Serial number, Grade and Reach

#### S-17.1.3 Rigging a Load

When securing a load:

- Do not wrap the hoist cable around the load.
- Never attach a hoisting equipment hook directly to an object being lifted unless the object has a permanent lifting eye or similar attachment device designed for overhead lifting; use a sling or other certified overhead lifting device.
- Protect the sling or lifting device from chafing or cutting.
- Make sure the load is securely hooked and well-balanced.
- Make sure the load is always properly set in the bowl of the hook. Loading on or toward the point (except in the case of grab hooks or other hooks designed for such loading) overloads the hook and causes the hook to spread and possibly fail.
- When freeing a sling, make sure the load has settled before unhooking the sling. Stand clear to avoid being struck by the sling or load.

#### S-17.1.4 Chain Slings

- Chain slings used for overhead lifting must be constructed of Grade 8 or greater alloy steel.
- Never splice or shorten a chain by inserting a bolt between links.
- Never load a kinked chain. When applying a load, take up slack slowly and see that every link in the chain seats properly.
- Use chain attachments (rings, shackles, couplings, and end links) designed for the chain to which they are fastened.

### S-17.1.5 Below-the-Hook Lifting Devices

Use only below-the-hook lifting devices that are certified by a qualified individual or manufacturer. Certified below-the-hook lifting devices will have a permanent nameplate or marking stating the following information:

- Manufacturer's name.
- Serial number.
- Lifter weight (if over 100 lb).
- Rated load (capacity).

Modify or re-rate below-the-hook lifting devices only with written permission from the manufacturer. Repair below-the-hook lifting devices only if you are qualified or are under the direction of a qualified person.

## S-17.2 Cranes and Hoists

### S-17.2.1 Requirements

If you are the operator and you are leaving the crane, ensure that the:

- Master clutch is off.
- Machine brakes are set.
- Load is lowered to the ground.

If crane is rail-mounted, set the hand brake and ensure that at least one wheel is chocked or "skated."

Complete the "Work Equipment Crane Operation" class before operating a movable counterweight crane.

Operators must document monthly inspection of cranes, repairing or removing from service those that fail inspection.

A log book, operator's manual, and service manual must be readily accessible in the cab of cranes at all times.

### S-17.2.2 Lifting

When lifting:

- Ensure that a designated employee will direct movement and give signals. This employee must determine that all personnel are in safe positions before hoisting begins.
- The operator must stay at the controls when a load is suspended.
- Return cranes and hoists to Neutral and secure positions when not in use.
- When lifting heavy loads, test the brakes when the load is suspended a few inches above the floor or ground.

### S-17.2.3 Outriggers

Comply with manufacturer's requirements for deployment of crane outriggers unless a written exception has been issued by the manufacturer to BNSF. Manufacturer's requirements can be found in the operator's manual and/or on the load chart(s) which are required to be on the crane at all times.

### S-17.2.4 Fouling Track

Provide adequate protection for a machine, boom, or load before allowing it to foul a track.

### S-17.2.5 Power Line Clearance

Maintain mandatory minimum clearances, as shown in the chart, between electrical power lines and any part of a hoisting device or load. If the power line voltage cannot be determined, maintain a minimum of 45 feet clearance.

Power Line	Distance from Power Line
50 KV or below	10 feet
50 KV - 200 KV	15 feet
200 KV - 350 KV	20 feet
350 KV - 500 KV	25 feet
500 KV - 750 KV	35 feet
750 KV - 1000 KV	45 feet

If power line voltage clearance requirements cannot be met, then ensure that a power company official de-energizes and grounds the power lines before any part of the crane or load enters the clear zone, or takes equivalent actions that comply with applicable regulatory requirements.

#### Clearances for Cranes or Other Equipment in Transit Near Power Lines

Power Line	Distance from Power Line
0.75 KV or below	4 feet
0.75 KV - 50 KV	6 feet
50 KV - 345 KV	10 feet
345 KV - 750 KV	16 feet
750 KV - 1000 KV	20 feet

Whenever possible, perform your work moving away from the power line, not towards it.

Whenever working a crane within one boom length of the mandatory minimum clearance from a power line in any direction—front, back, side, or overhead—position a lookout on the ground to warn you of the approach to the limits. The lookout cannot be the same person (groundman) who is giving signals for the move

### S-17.2.6 Load Clear of Persons

Do not move a load until all persons are clear.

Never move a load over people or occupied equipment. Use a warning device to warn persons in the path of the approaching load.

### S-17.2.7 Wheel Cover for Crane Operators

The use of an approved steering wheel cover is required to be placed on the steering wheel of any truck equipped with a boom before use of the boom. The truck driver must place this cover on the steering wheel as a reminder to properly stow boom and outriggers before travel. Once the boom and outriggers are in the stowed position, the cover must be removed from the steering wheel before travel.

### **S-17.3 Passengers**

Board a crane only if authorized by the operator. If you are a passenger, ride only in safe areas designated by the operator.

### **S-17.4 Electric Cranes**

When operating an electric crane, do not leave the crane cab or allow anyone on top of the cab without opening the main switch.

### **S-17.5 Restrictions Near Hoisting Equipment**

#### **S-17.5.1 Working Near Equipment**

Do not walk, stand, or work under a suspended load. When possible, avoid walking, standing, or working under crane booms, or in close proximity to pile driver leads.

When working with or near lifting operations, keep clear of the swinging boom, counterweight, or cab.

#### **S-17.5.2 Guiding the Load**

Use only tag lines, poles or load hooks to guide a load. Use guides or fixtures, where available, for precision placement.

Exception:

When necessary for precision placement and following risk assessment, gloved hand or hands may be used to guide a load into final position, provided that no part of the body is placed between the load and any obstruction that would create a pinch point.

### **S-17.6 Crane and Hoisting Signals**

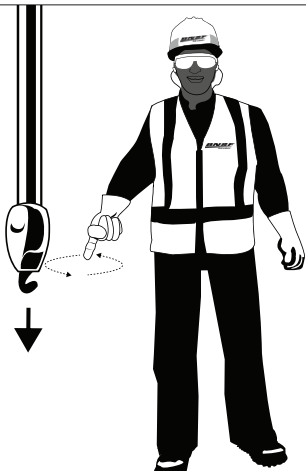

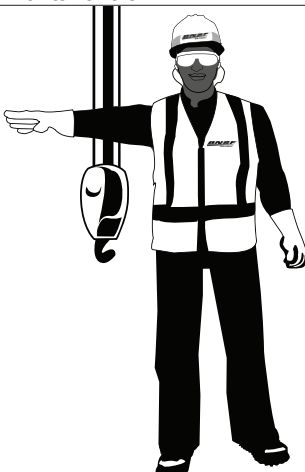

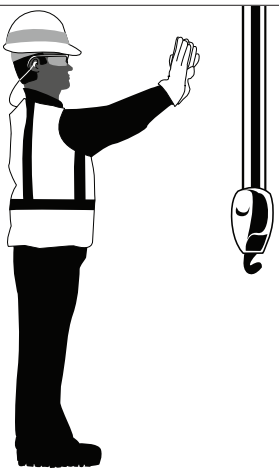

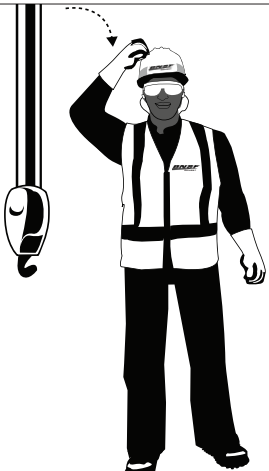

Only a designated employee (groundman) will give signals to the hoisting machine operator. Before work begins, the groundman must communicate with the operator to develop an understanding of all signals.

The crane operator must stop the move if a signal is not understood or if visual contact is lost with the groundman. The groundman must continue to give signals until the move is complete.

When two or more hoisting machines are lifting the same load, only one designated employee will direct the movements.

Accept signals for operating hoisting equipment only from the designated groundman, except in an emergency. An emergency stop signal must be accepted from anyone.

### S-17.7 Standard Crane Hand Signals

 <p><b>HOIST:</b> With forearm vertical, forefinger pointing up, move hand in small horizontal circle.</p>	 <p><b>LOWER:</b> With arm extended downward, forefinger pointing down, move hand in small horizontal circle.</p>	 <p><b>STOP:</b> Arm extended, palm down, move arm back and forth horizontally.</p>
 <p><b>EMERGENCY STOP:</b> Both arms extended, palms down, move arms back and forth horizontally.</p>	 <p><b>SWING:</b> Arm extended, point with finger in direction of swing of boom.</p>	 <p><b>TRAVEL:</b> Arm extended forward, hand open and slightly raised, make pushing motion in direction of travel.</p>
 <p><b>RAISE BOOM:</b> Arm extended, fingers closed, thumb pointing upward.</p>	 <p><b>LOWER BOOM:</b> Arm extended, fingers closed, thumb pointing downward.</p>	 <p><b>USE MAIN HOIST:</b> Tap fist on head; then use regular signals.</p>

**USE WHIPLINE (Auxiliary Hoist):**  
Tap elbow with one hand; then use regular signals.

**MOVE SLOWLY:** Use one hand to give any motion signal and place other hand motionless in front of hand giving the motion signal.

**DOG EVERYTHING:**  
Clasp hands in front of body.

**RETRACT BOOM (Telescoping Booms):**  
Both fists in front of body with thumbs pointing toward each other.

**EXTEND BOOM (Telescoping Booms):**  
Both fists in front of body with thumbs pointing outward.

**RAISE BOOM, LOWER LOAD:**  
With arm extended, thumb pointing up, flex fingers in and out as long as load movement is desired.

**LOWER BOOM, RAISE LOAD:**  
With arm extended, thumb pointing down, flex fingers in and out as long as load movement is desired.

**TRAVEL (One Track):** Lock the track on side indicated by raised fist; travel opposite track in direction indicated by circular motion of other fist, rotated vertically in front of body. (For land cranes only.)

**TRAVEL (Both Tracks):**  
Use fists in front of body, making a circular motion about each other, indicating direction of travel, forward or backward. (For land cranes only.)

## **S-17.8 Whistle Signals**

### **S-17.8.1 Moving in Either Direction**

If you are the operator of a locomotive crane, pile driver, or another crane operated on the rail, give the following whistle or horn signals before moving ahead or back:

- Two long blasts when moving ahead.
- Three short blasts when moving back.

### **S-17.8.2 Approaching Work Areas, Crossings, and Intersections**

If you are the operator of a crane that is approaching a work area, crossing, or intersection, be prepared to stop. When the way is clear, sound a warning signal and proceed. When one or more cars are being handled ahead of the crane, station a helper on the leading car to protect the movement unless this creates a safety hazard.

## **S-17.9 Personnel Hoisting**

Material handling cranes must not hoist personnel, except with the authority of the supervisor and only in compliance with the requirements stated in ANSI standard B30-5-1994 “Mobile and Locomotive Cranes.”

## **S-17.10 Chain Hoist (Come-Along) Inspection Program**

### **A. Frequent Inspections**

Visual inspections are required before and during each use. Items that must be inspected include the handle, hooks, and load chain.

### **B. Periodic Inspections**

Periodic inspections must be performed on a semiannual basis.

If any defects or deficiencies are found, the hoist must be removed from service and repaired or replaced.

**This page left blank intentionally.**

## **S-20.0 Work Environment**

### **S-20.1 Protection for Openings**

Keep covers on drop pits, manholes, or similar openings. When necessary to remove the covers, use the proper barricades or guard rails to protect the opening.

Do not step or jump across pits, manholes, or similar openings.

### **S-20.2 Clearances and Obstructions**

#### **S-20.2.1 Overhead and Side Obstructions**

Do not contact overhead or side obstructions on or near the right of way.

#### **S-20.2.2 Communication/Signal Wires**

Do not touch broken or sagging communication and signal wires, power lines, and guy wires. Repair wires and power lines only if you are qualified to do so. Do not use metal or metal-reinforced tape near wires.

### **S-20.3 Confined Space**

Consider all confined spaces hazardous unless proven otherwise. All employees and contractors must have a permit before entering a permit-required confined space.

### **S-20.4 Machine Operation**

Unauthorized persons must not be on hoists, machines, shop machinery, or distract employees operating such equipment.

#### **S-20.4.1 Protecting Hoses/Cables**

Operate mobile equipment over hoses or electrical cables only if they are properly bridged.

#### **S-20.4.2 Working Surfaces**

Keep working surfaces free of coolants, lubricants, petroleum products, or other slippery material when these surfaces are on or around vehicles, machines, or equipment that employees are operating.

### **S-20.5 Office Environment**

#### **S-20.5.1 Office Equipment Arrangement**

Arrange office equipment to keep aisles and emergency exits clear.

#### **S-20.5.2 Filing Cabinets and Desks**

Arrange contents of filing cabinets to balance the cabinet.

Distribute contents throughout the cabinet rather than in the top drawer; place the heavier materials in the bottom drawer.

Arrange the material neatly and keep the cabinet and desk drawers closed while unattended.

Do not use the top of cabinets for storage.

#### **S-20.5.3 Chairs**

Do not scoot across floors or stand on chairs with casters. Keep all chair legs on the floor.

**S-20.5.4 Cords**

In walking areas, encase the telephone or electrical cords in cord protectors, or properly secure them.

**S-20.5.5 Paper Cutters**

Use paper cutters and other office equipment carefully, keeping body parts clear. Close and secure the paper cutter blade after use.

**S-20.5.6 Reaching Overhead**

Use a ladder or step stool to reach overhead objects.

**S-20.5.7 Folding and Four-Point Office Chairs**

Remove all four-point, pedestal type chairs with casters from service and replace with five-point base chairs. Restrict folding chairs to office/lunch room environments, and inspect regularly.

**S-20.16 Precaution with Roll-Up Doors**

Employees or equipment shall not pass under roll-up doors until they have come to a complete stop in the fully retracted position.

## S-21.0 Personal Protective Equipment (PPE)

### S-21.1 Personal Protective Equipment

#### A. Requirements

All BNSF employees, contractors and their agents, visitors, and vendors, working in other than an office environment, must wear long pants and waist-length shirts with sleeves and wear appropriate PPE at all times. Clothing must not interfere with vision, hearing, or use of hands and feet. BNSF employees must use personal protective equipment approved by the company. Replace and discard any PPE that no longer provides protection. PPE tables are provided to assist in matching the job with appropriate protection.

Be familiar with and wear personal protective equipment and clothing as required by your job. Any changes made in the recommended use or design of personal protective equipment or clothing must be approved by the manufacturer.

- Do not wear jewelry, wrist watches, long watches or key chains, key rings, or other suspended jewelry when they present a hazard around machinery or electrical lines and equipment.
- Do not wear finger rings unless you are working in an office or office-like area.
- Hair must be secured out of the way if it could become entangled in machinery or obscure your vision.

#### B. Off-the-Job-Use

Employees are encouraged to use BNSF-provided personal protective equipment (PPE) off the job.

#### C. Additional PPE

Additional personal protective equipment, such as face shields, fall protection, welding jackets, etc., may be required by supervisors and/or as good safety practice warrants. See the PPE Chart for task/exposure-specific personal protective equipment requirements and recommendations.

#### D. PPE Exceptions

Personal protective equipment (PPE) is not required:

- When performing office tasks in office areas.
- Passenger train employees while embarking / disembarking passengers at passenger stop locations.
- Inside passenger-carrying rail cars.

Personal Protective Equipment and Clothing Chart								
PPE Chart X = Required equipment # = May be required based on task and materials	Hearing Protection	See Eye & Face Protection Chart	Protective Hand wear (See Hand Protection Chart)	Welder's Jacket	Spats, Leggings	Disposable Overalls	Rubberized Apron	Remarks/Special Requirements

Spraying/general use of cleaning agents: follow manufacturer's instructions.								

## S-21.2 Safety Eyewear

### A. Requirements for Safety Eyewear

BNSF employees must wear safety glasses with permanently mounted side shields and authorized by BNSF. Authorized tints for safety glasses are: Grey #1 indoors and Grey #1, #2 and #3 outdoors. No other tinting (as prescribed in requirements) is permitted. Mirror like lenses, amber (“shooters”) lenses or lenses that are intended to correct a color vision deficiency are prohibited. Additional eye protection may be required depending upon the work to be performed or exposure to that work.

Except when welding or operating a torch, do not wear dark lens goggles or glasses at night or when working inside buildings/shops.

Photo-grey or transition lenses are not to be worn by personnel operating mobile equipment from outdoor to indoor locations, or by personnel who perform similar tasks requiring critical activity or fast reaction to visual stimuli.

Exceptions: Safety glasses are not required when inside highway vehicles or hy-rail vehicles when windows are completely closed.

### B. Eye and Face Protection for Equipment and Machinery

Wear a minimum of splash goggles when servicing or repairing systems (i.e.- piping, tanks, hoses) containing liquid that may result in exposure to a release of the contents of that system. For severe exposure, such as repairing/servicing systems that contain contents at extreme temperatures, corrosives, or toxic materials, the employee must wear a faceshield over splash goggles.

Exception: Additional eye protection would not be required if specific task has engineering controls or other safeguards to control risk from inadvertent contact.

### C. Use of Goggles

Employees are to wear goggles when performing overhead work in areas where loose material or particles are a hazard or when flying dust or particles are created. Goggles, or a face shield over safety glasses are required when working under cars or locomotives.

### Eye and Face Protection Chart

1. Type of safety eyewear and facewear to be worn. Properly tinted lenses must be used as required.
2. Maxims are considered as goggles only when worn with straps.
3. Where faceshields are worn only to meet requirements relating to metal to metal striking operations utilizing a 3 lb. or greater hammer, safety glasses may be worn underneath the faceshield, in lieu of impact goggles unless specified otherwise.
4. Polycarbonate faceshields over splash goggles are to be worn when exposed to liquids.
5. No other form of eye protection is required to be worn underneath a full-face respirator, to address impact concerns, when the faceshield has the ANSI Z87 marking.

Task	Basic Requirements	More Severe Exposure	Remarks/Special Requirements
Abrasive blasting	Supplied air hood		
Abrasive grinding or cutting (portable)	Faceshield over impact goggles		Full length faceshield is required.
Abrasive grinding or cutting (stationary)	Impact goggles	Faceshield over impact goggles	Includes personnel on rear platform of production rail grinder as well as personnel in vehicles trailing production rail grinder where windows are open.
ATV operation	Safety glasses	Impact goggles	
Banding materials	Safety glasses		
Batteries, servicing locomotive	Faceshield over splash goggles		
Blowing or cleaning with compressed air	Impact goggles; or welding helmet over safety glasses	Faceshield over splash or impact goggles, as appropriate	Always direct air away from eyes. See Track Welding manual for requirements when welding frogs.
Boring, drilling, or reaming	Safety glasses	Impact goggles	Faceshield over impact goggles when reaming bolt holes.
Buffing and polishing with a wire wheel	Faceshield over impact goggles or welding helmet over safety glasses		
Carbon-arc cutting and gouging	Welding helmet over safety glasses		See Welding Operations Shade Chart.
Chop saw	Faceshield over impact goggles		Shorter length faceshields may be used.
Chipping, cutting, or caulking metal	Impact goggles	Faceshield over impact goggle required when using a 3 lb. or greater hammer	Shorter length faceshields may be used.
Climbing poles	Safety glasses		
Cut-off discs, saws, or other tools with carbide bits	Faceshield over impact goggles		
Cutting rivets, bolts, cotter keys, splitting nuts, etc.	Safety glasses	Impact goggles or faceshield over impact goggles	When working overhead, wear impact goggles and faceshield.
Driving, bucking, sticking, or heating rivets	Faceshield over impact goggle		Full length faceshield is required.
Dusty conditions	Impact goggles		
Electrical hazard	Safety glasses	Arc flash equipment	See E.I. 1.9, Electrical Safety and applicable JSAs.
Electrical welding	Welding helmet over safety glasses		See Welding Operations Shade Chart.
Fueling locomotives	Splash goggle; or faceshield over safety glasses	Faceshield over splash goggle	
Gas welding cutting, and heating	Welding goggle or shaded faceshield over safety glasses	Welding helmet over safety glasses	See Welding Operations Shade Chart.
Hammer (punch)	Safety glasses	Impact goggles	Faceshield over safety glasses or goggles required when metal to metal contact using a hammer greater than or equal to 3 lb.

### Eye and Face Protection Chart

1. Type of safety eyewear and facewear to be worn. Properly tinted lenses must be used as required.
2. Maxims are considered as goggles only when worn with straps.
3. Where faceshields are worn only to meet requirements relating to metal to metal striking operations utilizing a 3 lb. or greater hammer, safety glasses may be worn underneath the faceshield, in lieu of impact goggles unless specified otherwise.
4. Polycarbonate faceshields over splash goggles are to be worn when exposed to liquids.
5. No other form of eye protection is required to be worn underneath a full-face respirator, to address impact concerns, when the faceshield has the ANSI Z87 marking.

Task	Basic Requirements	More Severe Exposure	Remarks/Special Requirements
Hand tools	Safety glasses	Impact goggles	Faceshield over safety glasses or impact goggles required when metal to metal contact using a hammer greater than or equal to 3 lb, including spiking, clip application/removal, chisel use, etc.
Handling chemicals or refrigerants, or in greasy conditions	Splash goggles	Faceshield over splash goggles	
Handling or servicing storage batteries	Faceshield over splash goggles		
Intermodal facility	Safety glasses	Dependent upon task being performed.	
Lifting and carrying	Safety glasses		
MIG/TIG welding	Welding helmet over safety glasses		See Welding Operations Shade Chart.
Painting	Safety glasses	Splash goggles or faceshield over splash goggles	
Plasma arc cutting	Welding helmet over safety glasses		See Welding Operations Shade Chart.
Powder-actuated tools	Impact goggles	Faceshield over impact goggles	
Rail drills	Safety glasses	Impact goggles	
Rail grinder or saw	Faceshield over impact goggles		Full length faceshield is required.
Sandblasting (abrasive blasting)	Supplied air hood		
Sanding locomotives	Safety glasses	Impact goggles	
Scaling, scraping or removing welding flux	Welding helmet over safety glasses	Faceshield or welding helmet over impact goggles	
Snow blowing	Safety glasses	Impact goggles	
Spraying and general use of chemicals	Splash goggles	Faceshield over splash goggles	
Spray painting (gun)	Splash goggles	Faceshield over splash goggles	
Steam cleaning	Splash goggles	Faceshield over splash goggles	
Striking, or striking with, hardened tools and fastenings	Safety glasses	Impact goggles	Faceshield required over impact goggles or safety glasses when metal to metal contact using a hammer greater than or equal to 3 lb, including spiking, clip application / removal, chisel use, etc. Shorter length faceshields may be used.
Visitors exposed to eye hazards	Safety glasses	Impact goggles	Employee in charge may require that additional equipment be worn.
Washing locomotives	Faceshield over safety glasses or splash goggles	Faceshield over splash goggles	
Woodworking machines	Safety glasses	Impact goggles	Conditions may result in a need to upgrade to a faceshield over impact goggles.

Eye and Face Protection - Welding Operations Shade Chart

## S-21.3 Hard Hat

### A. Hard Hat Requirements

Hard hats applicable to designated crafts and work areas that meet ANSI standard Z89.1, Type I, Class E & G specifications are found in the BNSF Safety and Health Equipment Catalog.

### B. Hard Hats Exceptions

Hard hats are not required:

- For Train, Yard, and Engine (TY&E) employees except when performing work service with Maintenance of Way, at derailments, or as directed by supervisor.
- When operating vehicles or equipment with overhead protection. Including, but not limited to, forklifts with overhead protection or roadway equipment having enclosed cabs; or when inside highway or hy-rail vehicles.

## S-21.4 Hand Protection

### A. Hand Protection Required

Wear hand protection when there is a risk of exposure to harmful substances, punctures, severe abrasions, lacerations or cuts, chemical or thermal burns, high voltage, vibration, temperature extremes, or infectious biological agents.

All BNSF employees must wear protective gloves when performing their work. Use the PPE Chart and Work Glove Selection Guide to select the appropriate glove for the task.

### B. Hand Protection Exceptions

- Gloves are not to be worn where they could be caught by moving parts or rotating stock.
- Gloves are not necessary when fine dexterity is required to perform a task (i.e. handling small electrical components, o-rings, gaskets, operating a computer or control panel, using a radio) when there is no potential for exposure to energized electrical systems, sharp projections, hot surfaces, or corrosive chemicals.
- Gloves are not necessary when working in offices or when operating motor vehicles.

### C. Insulating Gloves

- The integrity of the glove insulation must be verified before each use. See manufacturer's instructions for proper application, testing and use of gloves. Insulating equipment failing to pass inspection must be removed from service and may not be used.
- Insulating gloves must be worn along with protector gloves (such as leather), and both insulating gloves and sleeves need to be stored properly when not in use. Proper storage means that gloves must not be folded and need to be kept out of excessive heat, sunlight, humidity, ozone, and any chemical or substance that could damage the rubber.

### D. Sharpening Chain Saw Blades

When sharpening chain saw blades, use the proper chain saw file and wear cut-resistant gloves.

### E. High-Voltage Protective Gloves

- Gloves will be tested every six months per OSHA (29 CFR 1910.137, Table 1-6).
- Insulating gloves must be rated for the voltage to which a worker will be exposed. The following chart provides guidelines for proper selection of insulating gloves.

<b>Voltage-Rated Gloves Chart</b>			
<b>Class</b>	<b>Max AC Use Voltage</b>	<b>Max DC Voltage (average)</b>	<b>Color of Label</b>
00	500	750	Tan
0	1,000	1,500	Red
1	7,500	11,250	White
2	17,000	25,500	Yellow
3	26,500	39,750	Green
4	36,000	54,000	Orange
<p>In the cuff portion of each glove, there's a nonconductive label. As listed in the table, the label is colored depending on the glove class.</p>			

Hand Protection - Work Glove Selection Guide

Washing locomotives					X				X	
Woodworking tools	O		X	X	O	X				X

## S-21.5 Enhanced Visibility Work Wear

### A. Enhanced Visibility Work Wear Requirements

Enhanced visibility work wear is to be worn in accordance with specifications listed below:

- When performing work outside of buildings.
- When at locomotive service tracks.
- Must be worn as an outer garment, not covered or partially covered by overalls, coats, etc.
- Enhanced visibility garments are to be replaced when they become faded or dirty to the point where they no longer function as an enhanced visibility garment.
- Acceptable items of enhanced visibility garments include vests, shirts, coats/jackets or raingear.
- Must be orange in color with retro-reflective striping, BNSF approved and meet ANSI Class II or III Reflective Standards.
- ANSI Class III work wear is required to be worn by the flagger when highway flagging at night or when highway flagging operations are performed on roadways where posted speeds are 50 MPH or greater.
- Only high visibility garments rated for electrical work may be worn when exposed to energized electrical systems or equipment above 50 volts.

### B. Enhanced Visibility Work Wear Exceptions

Enhanced visibility work wear is not required:

- When performing work inside of buildings (this exception does not apply to indoor service tracks).
- When walking from one building to another on designated walkways within designated mechanical facilities.
- While wearing leathers when performing hot work outdoors. Upon completion of hot work, high visibility must be worn in accordance with the requirements outlined in this rule.

## S-21.6 Hearing Protection

Hearing protection (ear plugs/earmuffs) must be worn when entering designated hearing protection areas, while performing designated jobs/activities, or in situations where the noise requires an employee to raise his or her voice during normal conversation at a distance of 3 feet.

Annual hearing conservation training and audiometric testing is mandatory for employees required to wear hearing protection on the job. Regardless of noise exposure, you are encouraged to participate in the hearing conservation program.

### A. Hearing Protection Required

Wear hearing protection when working in the following areas:

- On locomotive servicing tracks, fueling pads, inbound/ outbound staging tracks and other posted areas.
- On a locomotive under load.
- Within 100 feet of humping or retarder operations.
- In a high-noise area required by posted notice or special instructions.

### B. Hearing Protection During Hot Work

All employees involved in welding, cutting, or heating operations must wear ear plugs or ear muffs.

### C. Hearing Protection During Energized Electrical Work

Ear plugs or ear muffs are to be worn when performing any inspection or maintenance work on energized electrical systems or equipment.

### D. Hearing Protection Exceptions

When all doors and windows are closed, hearing protection is not required inside the control compartment of GE locomotives B40-8W, C40-8W, B40-8, C44-9W, ES44AC, ES44C4, ES44DC, AC4400CW, AC4400EV and EMD locomotives GP60M, SD60M, SD70M, SD75M, SD70MAC, and SD70ACE.

## S-21.7 Safety Footwear

### A. Safety Boots

Safety boots must meet the following criteria:

- Leather or leather-like upper.
- Sturdy non-leather sole that will resist puncture.
- 3/8- to 1-inch defined instep.
- Above ankle (5-inch height as measured from inside boot).
- Minimum ASTM F2412-05, ASTM F2413-05–75-pound (100 pounds in Canada) impact and compression class toe.
- Lace-up.

### B. Anti-Slip Winter Footwear

Employees will wear anti-slip winter footwear when working in icy and or snowy conditions. Only BNSF approved winter footwear may be worn.

## S-21.8 Respirator Selection and Use

Refer to the Respiratory Protection Chart to determine which task requires use of respirators. Your supervisor, safety manager, or the Industrial Hygiene group may specify additional tasks or activities not listed that require the use of respirators. If you have questions about the appropriate respirator selection, contact Industrial Hygiene.

### A. Respiratory Protection Program

All BNSF employees who use a respirator must comply with the practices and procedures outlined in the Respiratory Protection program. When you are required to wear a respirator, you must:

- Be trained and fit-tested annually for the specific make and model of the respirator used.
- Be medically qualified annually.
- Not have any facial hair which contacts the sealing surface of the respirator facepiece or potentially interferes with the respirator valve function. Binding, rolling up, or other methods to constrain beards and moustaches are not acceptable means of compliance. These requirements apply when fit testing and whenever a respirator is worn.
- Inspect your respirator before use.
- Clean and properly store respirator following use.

### B. Voluntary Respirator Use

When a respirator is not required for an activity, but you wish to voluntarily wear a respirator you must:

#### Elastomeric facepiece models

- Be trained and fit-tested annually for the specific make and model of the respirator used.
- Be medically qualified annually.
- Not have any facial hair which contacts the sealing surface of the respirator facepiece or potentially interferes with the respirator valve function. Binding, rolling up, or other methods to constrain beards and moustaches are not acceptable means of compliance. These requirements apply when fit testing and whenever a respirator is worn.
- Clean and properly store the respirator following use.

#### Filtering facepiece models

- User must comply with all requirements of BNSF Respirator Program.

**Respiratory Protection Chart**

Task	Required Respirator (See Key)							Cartridge (As Applicable)	
	APR-HM-FF	APR-HM-EF	APR-FM	PAPR	SAR	SABH	SCBA	P100	MC
Abrasive blasting						X			
Air arcing on frogs. Note: This activity also requires the use of an engineering control - the Smoke Cannon local exhaust ventilation	X	X		X				X	
Asbestos: Disturbing or removing any asbestos-containing materials		X						X	
Blowing and cleaning with compressed air	X	X							
Bolt installation/ removal on lead bridges using pneumatic tools. No torch heating involved		X						X	
Compressed air removal of particulate in locomotive sub-floor areas			X	X				X	
Disturbing, removing or disposing of accumulations of dried bird droppings	X	X						X	
Disturbing, removing or disposing of rodent nests	X	X						X	
Entry into, or work performed in confined spaces, where the oxygen levels are less than 19.5%, and/or concentrations of airborne contaminants can cause rapid, serious health effects (IDLH conditions)							X		
Entry into, or work performed in, environments which can cause or may be reasonably anticipated to cause rapid, serious health effects (IDLH) environments, such as derailments involving release of hazardous materials							X		
Hazmat operations, where uncontrolled, unknown or IDLH atmospheres may exist							X		
Maintenance of way activities when visible dust is produced. Includes, but is not limited to, ballast dumping, scarifying, brooming, etc.	X	X						X	
Operating or riding locomotives in the Cascade, Stampede, Flathead or Moffat tunnels							X-1		
Spray painting using compressor or airless sprayer			X						X
Taconite handling and related maintenance operations when visible dust is present	X	X						X	
Welding/cutting, torch burning, or rivet busting on structures (lead-based painted surfaces)				X				X	
Welding, cutting, torch work inside enclosed cars/boxcars/ hopper cars, etc. where continuous, forced ventilation is not provided				X				X	

**Key**

- X** Respirator required - if multiple selections are indicated, either type may be used
- X-1** Specially designed SCBA solely used for the Tunnel Emergency Respirator Program (“TERP”)
- APR-HM-FF** Air purifying respirator, half-mask, filtering facepiece (30 #8233, 1100)
- APR-HM-EF** Air purifying respirator, half-mask, elastomeric facepiece
- APR-FM** Air purifying respirator, full Facepiece
- PAPR** Powered air purifying respirator
- SAR** Supplied air respirator, all types excluding blast helmet models
- SABH** Supplied air blasting helmet
- SCBA** Self-contained breathing apparatus
- MC** Multi-contaminant cartridge

Contact the BNSF Industrial Hygiene Department for additional information.

**Voluntary Use** - Where respirators are used for any task not identified within this table, the usage shall be deemed as voluntary. All requirements applicable to voluntary usage, as identified within BNSF documents, must be followed. For filtering facepiece models, the user must be provided with a copy of Appendix D to the Occupational Safety and Health Administration (OSHA) standard 29 CFR 1910.134, *Respiratory Protection*. Additionally, the user must not have any facial hair which interferes with the respirator-to-face seal. Where all other types of respirators are used on a voluntary basis (e.g. non-filtering facepiece models), the user must comply with all program requirements, including completing a medical questionnaire, being fit tested, attending training, and not having facial hair which interferes with the respirator seal.

**This page left blank intentionally.**

## **S-22.0 Movement of Trains and Engines**

### **S-22.1 Inspecting Passing Trains**

Inspect passing trains. If you detect any of the following conditions, notify crew members on the passing train by any available means:

- Overheated journals.
- Sticking brakes.
- Sliding wheels.
- Wheels not properly positioned on the rail.
- Dragging equipment.
- Insecure contents.
- Signs of smoke or fire.
- Headlights or markers improperly displayed.
- Any other dangerous conditions.

When possible, a crew member on the engine of the train being inspected must notify a crew member on the rear of the train when the train is being inspected by other employees.

**This page left blank intentionally.**

## S-23.0 Railroad Radio Rules

### S-23.1 Transmitting

Any employee operating a radio must do the following:

- Before transmitting, listen long enough to make sure the channel is not being used.
- Give the required identification.
- Not proceed with further transmission until acknowledgment is received.

### S-23.2 Required Identification

Employees transmitting or acknowledging a radio communication must begin with the required identification. The identification must include the following in this order:

For base or wayside stations:

- Name or initials of the railroad.
- Name and location or other unique designation.

For mobile units:

- Name or initials of the railroad.
- Train name (number), engine number, or words that identify the precise mobile unit.
- If communication continues without interruption, repeat the identification every 15 minutes.

#### Short Identification

After making a positive identification for switching, classification, and similar operations within a yard, fixed and mobile units may use a short identification after the initial transmission and acknowledgment.

### S-23.3 Repetition

An employee who receives a transmission must repeat it to the person transmitting the message, except when the communication:

- Concerns switching operations.
  - Is a recorded message from an automatic alarm device.
- or
- Is general and does not contain any information, instruction, or advice that could affect the safety of a railroad operation.

### S-23.4 Over

The employee transmitting must say, "Over" to the employee receiving the transmission when the communication is complete and a response is expected.

### S-23.5 Out

The employee transmitting must give the required identification and say, "Out" to the employee receiving the transmission when the communication is complete and no response is expected.

### S-23.6 Communication Not Understood or Incomplete

An employee who does not understand a radio communication or who receives a communication that is incomplete must not act upon the communication and must treat it as if it was not sent.

Exception: An employee who receives information that may affect the safety of employees or the public or cause damage to property must take the safe course. When necessary, stop movement until the communication is understood.

**S-23.7 Monitoring Radio Transmissions**

Radios in attended base stations or mobile units must be turned on to the appropriate channel with the volume loud enough to receive communications. Employees attending base stations or mobile units must acknowledge all transmissions directed to the station or unit.

**S-23.8 Acknowledgment**

An employee receiving a radio call must acknowledge the call immediately unless doing so would interfere with safety.

**S-23.9 Misuse of Radio Communications**

Employees must not use radio communication to avoid complying with any rule.

**S-23.10 Emergency Calls**

Emergency calls will begin with the words “Emergency,” “Emergency,” “Emergency.” These calls will be used only to cover initial reports of derailments, collisions, storms, washouts, fires, track obstructions, property damage, or injury to employees or the public. Emergency calls must contain as much complete information on the incident as possible.

All employees must give absolute priority to an emergency communication. Unless they are answering or aiding the emergency call, employees must not send any communication until they are certain no interference will result.

When monitoring marine radios to allow water traffic to pass under or through railroad bridges, the words “Mayday” will be used by marine traffic for distress calls and “Pan-Pan” for urgency signals. Absolute priority is to be given over other communications when heard.

**S-23.11 Prohibited Transmissions**

Employees must not transmit a false emergency or an unnecessary or unidentified communication. Employees must not use indecent language over the radio. Employees must not reveal the existence, contents, or meaning of any communication (except emergency communications) to persons other than those it is intended for, or those whose duties may require knowing about it.

**S-23.12 Fixed Signal Information**

Employees must not use the radio to give information to a train or engine crew about the name, position, aspect, or indication displayed by a fixed signal, unless the information is given between members of the same crew or the information is needed to warn others of an emergency.

**S-23.13 In Place of Hand Signals**

When the radio is used instead of hand signals, information must include the direction and distance to be traveled.

The following will be used to indicate direction and distance.

- “Ahead” will be used to indicate forward movement and “Backup” will be used for backward movement. Direction will be described in relationship to the front of the locomotive (F stencil, where applicable).
- Distance will be communicated using 50 feet as a standard car length.
- For continuous moves, communicate at least half the distance plus 1 car length until the distance is 2 car lengths, then use 2 cars, 1 car, 25 feet, and the word “Stop” to complete the move.

Movement must stop within half of the distance specified unless additional instructions are received.

## **S-23.14 Transmitting Track Warrants and Track Bulletins**

When transmitted by radio, track warrants and track bulletins must be transmitted according to applicable operating rules and the following:

- The train dispatcher must state that a track warrant or track bulletin will be transmitted.
- The employee must inform the train dispatcher when ready to copy. An employee operating the controls of a moving engine may not copy track warrants or track bulletins. In addition, track warrants or track bulletins must not be transmitted to the crew of a moving train if the conductor, engineer, or train dispatcher feels that the transmission could adversely affect the safe operation of the train. Within ABS territory, when train is operating on a block signal indication requiring movement at restricted speed or prepared to stop short of next signal, the train must be stopped before a track warrant extending the existing main track authority is copied.
- The employee receiving track warrants or track bulletins must copy them in writing using the format outlined in the operating rules.

## **S-23.15 Phonetic Alphabet**

If necessary, a phonetic alphabet (Alpha, Bravo, Charlie, etc.) will be used to pronounce clearly any letter used as an initial, except initial letters of railroads.

## **S-23.16 Assigned Frequencies**

The railroad must authorize any radio transmitters used in railroad service. Radio transmitters must operate on frequencies the Federal Communications Commission assigns the railroad. Employees are prohibited from using other transmitters or railroad frequencies not assigned to that particular territory.

## **S-23.17 Radio Testing**

Employees must test the radios at the beginning of each shift to verify that the radios are working.

The radio test must include an exchange of voice transmissions with another radio. The test must confirm the quality of the radio's transmission.

## **S-23.18 Malfunctioning Radio**

Malfunctioning radios must not be used. As soon as possible, notify each crew member and the train dispatcher or other affected employees that the radio is not working.

## **S-23.19 Blasting Operations**

Employees must not operate radio transmitters located less than 250 feet from blasting operations.

## **S-23.20 Internal Adjustments**

Employees are prohibited from making internal adjustments to a railroad radio unless they are specifically authorized by the FCC or hold a current Certified Technicians Certificate. Employees authorized to make adjustments must carry their FCC operator license, Certified Technicians Certificate, or verification card while on duty.

## **S-23.21 Mobile Radio Access System (MARS)**

MARS is a radio system. Employees using the system must avoid using the MARS for personal business, including:

- Phone calls home.
- Access to tape-recorded crew lineup information.

**This page left blank intentionally.**

## S-24.0 Signals and Their Use

### S-24.2 Blue Signal Protection of Workmen

#### S-24.2.1 Definitions

This rule outlines the requirements for protecting railroad workmen who are on locomotives for purposes other than moving or repositioning the locomotive; or who are inspecting, testing, repairing, and servicing rolling equipment. In particular, because these tasks require the workmen to work on, under, or between rolling equipment, workmen are exposed to potential injury from moving equipment. As used in this rule, the following definitions apply:

**Blue Signal.** During the day, a clearly distinguishable blue flag or light, and at night, a blue light. The blue light may be steady or flashing. The blue signal does not need to be lighted when it is attached to the operating controls of an engine and the inside of the engine cab area is lighted enough to make the blue signal clearly distinguishable.

A blue flashlight or portable magnetic base light at or near the locked switch or derail during daylight hours is generally not distinguishable to engineers or hostlers. Acceptable portable blue signals for use at switches and derails during daylight hours are blue flags or signs of sufficient size to make them distinguishable to engineers or hostlers.

**Car Shop Repair Area.** One or more tracks within an area where rolling equipment testing, servicing, repairing, inspecting, or rebuilding is controlled exclusively by mechanical department personnel.

**Crossover.** A combination of two switches that connect two adjacent tracks.

**Effective Locking Device.** When used in relation to a manually operated switch or a derail, a lock that can be locked or unlocked only by the craft or group of workmen applying the lock.

**Engine Servicing Area.** One or more tracks within an area where engine testing, servicing, repairing, inspecting, or rebuilding is controlled exclusively by mechanical department personnel.

**Group of Workmen.** Two or more workmen of the same or different crafts who work as a unit under a common authority and communicate with each other while working.

**Identification Tag (I.D. Tag).** A tag displaying employee's name and craft. The I.D. tag may also include the employee's photograph, but it is not required.

**Rolling Equipment.** Engines, cars, and one or more engines coupled to one or more cars.

**Switch Providing Direct Access.** A switch that if used by rolling equipment could permit the rolling equipment to couple to the equipment being protected.

**Workmen.** Railroad employees assigned to inspect, test, repair, or service railroad rolling equipment or components, including brake systems. Train and yard crews are excluded, except when they perform the above work on rolling equipment not part of the train or yard movement they are handling or will handle.

- "Servicing" does not include supplying cabooses or passenger cars with items such as ice, drinking water, tools, sanitary supplies, stationery, or flagging equipment.
- "Testing" does not include an employee making visual observations while on or along side a caboose or passenger car or while along side an engine. Also, testing does not include repositioning the activation switch or covering the photoelectric cell of the marker when the rear of the train is on the main track. The employee inspecting the marker must contact the employee controlling the engine to confirm that the train will remain secure against movement until the inspection is complete.

### S-24.2.2 What a Blue Signal Signifies

A blue signal signifies that workmen are on, under, or between rolling equipment and requires that:

1. Rolling equipment must not be coupled to or moved, except as provided in “**Movement in Engine Servicing Area**” and “**Movement in Car Shop Repair Area**” of this rule.
2. Rolling equipment must not pass a blue signal on a track protected by the signal.
3. Other rolling equipment must not be placed on the same track so as to block or reduce the view of the blue signal.

However, rolling equipment may be placed on the same track when it is placed on designated engine servicing area tracks or car shop repair area tracks, or when a derail divides a track into separate working areas.

4. Rolling equipment must not enter a track when a blue signal is displayed at the entrance to the track.
5. Controls or devices on rolling equipment that could affect equipment movement (ex. MU cables/hoses, handbrakes, angle cocks, etc.) must not be changed or operated unless directed by individuals who placed the blue signals or by the employee in charge of workmen.

Blue signals or remote control blue signals must be displayed for each craft or group of workmen who will work on, under, or between rolling equipment.

**Protection Removed.** Blue signals may be removed only by the craft or group who placed them. Remote control display may be discontinued when directed by the craft or group that requested the protection. When blue signal protection has been removed from one entrance of a double-ended track or from either end of rolling equipment on a main track, that track is no longer under blue signal protection.

### S-24.2.3 How to Provide Protection

**On a Main Track.** A blue signal must be displayed at each end of the rolling equipment and, if the rolling equipment to be protected includes one or more locomotives, a blue signal must be displayed on the controlling locomotive(s).

**On Other than a Main Track.** One of these three methods of protection or a combination of these methods must be provided:

1. Each manually operated switch, including any facing point crossover switch that provides direct access must be lined against movement onto the track and secured by an effective locking device. A blue signal must be placed at or near each such switch.

Use the following sequence when applying blue signal protection:

- a. Line and lock the switch.
  - b. Display blue signal at or near the switch.
- and
- c. If the rolling equipment to be protected includes one or more locomotives, a blue signal must be displayed on the controlling locomotive(s).

After work is complete, use the following sequence when removing blue signal protection:

- a. Remove blue signal from locomotive(s), if applied (remove any blue signal inside the cab before removing the blue signal visible from the outside on the engineer’s side of the locomotive).

- b. Remove the blue signal at or near the switch.
- c. Remove the lock from the switch and replace the hook or hasp, if equipped.

When one end of a crossover switch is used to establish blue signal protection on other than a main track, when blue signal protection is no longer needed, both switches of the crossover (not connected to a main track or siding) must be left either for normal position or for movement through the crossover.

[Diagram A.]

- 2. A derail capable of restricting access to the track where work will occur must be locked in derailing position with an effective locking device and:
  - a. Positioned at least 150 feet from the rolling equipment to be protected
  - or
  - b. Positioned at least 50 feet from the end of rolling equipment on a designated engine servicing track or car shop repair track where speed is limited to not more than 5 MPH. A blue signal must be displayed at each derail.

Use the following sequence when applying blue signal protection:

- a. Lock the derail in the derailing position
- b. Display blue signal at the derail
- and
- c. If the rolling equipment to be protected includes one or more locomotives, a blue signal must be displayed on the controlling locomotive(s).

After work is complete, use the following sequence when removing blue signal protection:

- a. Remove blue signal from the locomotive(s), if applied (remove any blue signal inside the cab before removing the blue signal visible from the outside on the engineer's side of the locomotive).
- b. Remove the blue signals at the derails.
- c. Remove the lock and place the derail in the non-derailing position.

[Diagram B.]

3. Where remote control switches provide direct access, the employee in charge of the workmen must tell the switch operator what work will be done. The switch operator must then:
  - a. Inform the employee in charge of the workmen that the switches have been lined against movement onto the track and devices controlling the switches have been secured.
  - b. Not remove the locking devices unless the employee in charge of the workmen says it is safe to do so.
  - c. Maintain for 15 days a written record of each notification that includes:
    - Name and craft of the employee in charge of the workmen requesting protection.
    - Identification of track involved.
    - Date and time the employee in charge of workmen is notified that protection was provided.
    - Date, time, name, and craft of the employee in charge of workmen who authorized removal of the protection.

After the switch operator informs the employee in charge of workmen that switches have been lined against movement onto the track and devices controlling the switch have been secured, display required blue signals on controlling locomotive(s).

After work is complete, use the following sequence when removing blue signal protection:

- Remove blue signal from locomotive(s), if applied (remove any blue signal inside the cab before removing the blue signal visible from the outside on the engineer's side of the locomotive).
- The employee in charge notifies the switch operator it is safe to remove switch locking devices.

[Diagram C.]

#### S-24.2.4 Blue Signal Protection on Service Tracks and at Shops

A facility that engages in servicing and maintaining cars and locomotives must protect the tracks in which this activity occurs by following the blue signal protection requirements outlined in "On Other than a Main Track."

This does not include those tracks in which consists are being made up, main line fueling facilities or yard tracks that are protected by existing means and in compliance with FRA standards.

### Derail Protection for Shops

In addition, each track entering a shop must be protected by a derail capable of restricting access to the track where work will occur. The derail must be locked in the derailing position with an effective locking device and positioned at least 50 feet from the shop door. A blue signal must be displayed at each derail.

### S-24.2.5 Protection for Workmen Inspecting Markers

Blue signal protection must be provided for workmen when they are:

1. Replacing, repositioning, or repairing a marker, and the rear of the train is on any track,  
or
2. Inspecting a marker by repositioning the activation switch or covering the photoelectric cell, and the rear of the train is on other than a main track.

### S-24.2.6 Protection for Emergency Repair Work

If a blue signal is not available for employees performing emergency repairs on, under, or between an engine or rolling equipment coupled to an engine, the employee controlling the engine must be notified and appropriate measures taken to provide protection for the employees.

### S-24.2.7 Blue Signal Readily Visible to Engineer

In addition to providing protection as required in “**On a Main Track**” and “**On Other than a Main Track**,” when workmen are on, under, or between an engine or rolling equipment coupled to an engine:

1. A blue signal must be attached to the controlling engine.
2. A blue signal must be visible to the engineer or employee controlling the engine and by anyone observing this locomotive from ground level on the engineer’s side.
3. The engine must not be moved.

[Diagram A.]

### Flagging Locomotive Consists

If two or more locomotives are in a consist and MU'd with electrical and air, a blue signal need only be attached to the controlling locomotive.

[Diagram B.]

**Flagging Multiple Locomotives**

Whenever multiple locomotives are coupled together, but are not connected by the MU cable or air hoses, a blue signal is to be applied to each locomotive before any work beginning. All locomotives in this status are to be considered controlling locomotives, whether they are running or not.

One of the multiple locomotives, designated by the mechanical facility, must have a blue signal that is visible to the operator at the controls of the locomotive and by anyone observing this locomotive from ground level on the engineer’s side. The remaining locomotives may be protected by placing a blue light or blue flag on the control stand, or by hanging a blue plastic donut-shaped tag over the throttle handle. The area inside the cab must be sufficiently illuminated to make the blue flag or donut-shaped tag clearly distinguishable. The tags must be marked “blue flag”.

[Diagram C.]

**Flagging Two or More Locomotives or Locomotive Consists on the Same Track - On Other than a Main Track outside Mechanical Limits**

When applying blue signal protection on Other than a Main Track outside mechanical limits, all controlling locomotive(s) on the same track must have a blue signal that is readily visible to the operator at the controls of the locomotive and by anyone observing this locomotive from ground level on the engineer’s side.

[Diagram D.]

**Flagging Two or More Locomotives or Locomotive Consists on the Same Track in Mechanical Limits**

When applying blue signal protection within mechanical limits, only the controlling locomotive(s) employees are on, under or between require a blue signal that is readily visible to the operator at the controls of the locomotive and by anyone observing this locomotive from ground level on the engineer’s side.

[Diagram E.]

### **S-24.2.8 Blue Signal Protection for Remotely Controlled Locomotives (RCLs)**

Blue signal protection for remotely controlled locomotives applies to RCLs attached to a cut of cars, left standing on a track with a cut of cars or left standing alone.

1. Apply appropriate blue signal protection as required for On a Main Track or On Other than a Main Track.
2. Attach blue signal to the locomotive before getting on the RCL unit.
3. Before commencing work, verify/change the remote control setup controls position for manual operation.
4. After positioning the setup controls for manual operation, a blue signal must be attached to the setup controls.

The setup controls may consist of either an air valve and circuit breaker (GE - Remote Control Locomotives) or a changeover switch (CANAC Remote Control Locomotives).

After work is complete, use the following sequence when removing blue signal protection:

1. Remove blue signal from RCL setup controls.
2. Remove blue signal from RCL unit (remove any blue signal inside the cab before removing the blue signal visible from the outside on the engineer's side of the locomotive).
3. If On Other than a Main Track, remove the blue signal at the switch or derail. For derails, remove the lock and place in the non-derailing position. For switches, remove the lock and reapply hook or hasp, if equipped.

or

If On a Main Track, remove the blue signals displayed at each end of the rolling equipment.

### S-24.2.9 Blue Signal Protection for Distributive Power Units

When trains are set up with Distributive Power (DP) units, blue signal protection is required on the lead locomotive of the head-end consist. Individual I.D. tags are to be placed on the blue signal of the lead locomotive of head-end consist.

No blue signal is required on the DP Remote locomotive(s) as long as it has been verified these units are linked with the head end and no work is being performed on the DP locomotive(s). Any time DP units are unlinked or when the DP remote locomotive(s) are being worked, an additional blue signal must be attached to the DP Remote locomotive in the train before work may begin. The I.D. tags of those individuals working the DP remote must be attached to this blue signal.

Link verification can be accomplished through visual observation of the lead locomotive display screen, verbal confirmation by the crew working the lead consist, or verbal confirmation from the appropriate supervisor.

[Diagram A.]

[Diagram B.]

[Diagram C.]

### S-24.2.10 Use of I.D. Tags

#### Applying I.D. Tags

Each employee shall attach their I.D. tag to the blue signal of any locomotive they are on. I.D. tags must be attached to part of the blue signal visible from the ground on the engineer's side of the locomotive.

When multiple people are working a single locomotive, all I.D. tags must be attached directly to a single blue signal. Where two or more locomotives are coupled together, all I.D. tag(s) must be placed on the blue signal at the locomotive/location designated by the shop.

Exceptions: The application of I.D. tags to the blue signal does not apply to the following:

- When crossing over a locomotive from one ramp to the next in shops with elevated ramps.
- When in the process of moving or spotting locomotive(s).

### **Removing I.D. Tags**

When the employees complete their task(s) on the locomotive, they must each remove their own I.D. tag. The last employee working on the locomotive will also remove the blue signal after checking to be certain no other employees are on, under, or between the equipment.

### **S-24.2.11 Movement in Engine Servicing Area**

An engine must not enter a designated engine servicing area until the blue signal protection is removed from the entrance. The engine must stop short of coupling to another engine.

An engine must not leave a designated engine servicing area unless the blue signal is removed from the engine and the track in the direction of movement.

Blue signal protection removed to let engines enter or leave the engine servicing area must be restored immediately after the engine enters or clears the area.

An engine protected by blue signals may be moved on a designated engine servicing area track when:

1. An authorized employee operates the engine under the direction of the employee in charge of workmen.
2. The blue signal has been removed from the controlling engine to be repositioned.
3. Workmen have been warned of the movement.

### **S-24.2.12 Movement in Car Shop Repair Area**

When rolling equipment on car shop repair tracks is protected by blue signals, a car mover may reposition the equipment if:

1. Workmen have been warned of the movement.
2. An authorized employee operates the car mover under the direction of the employee in charge of workmen.

## **S-24.3 MW Protection within Car Shop, Repair or Engine Servicing Areas**

When maintenance is performed on tracks within car shop, repair or engine servicing areas, roadway workers must make the working limits inaccessible as indicated in the MWOR. Before establishing working limits the roadway worker in charge must conduct a job safety briefing with the mechanical employee in charge of the car shop, repair or engine servicing area. When locomotives, cars or motorized on-track equipment are on the track where working limits will be established, the roadway worker in charge and the mechanical employee in charge must jointly establish safeguards to protect the working limits against other movements. The roadway worker in charge must notify the mechanical employee in charge when work is completed and working limits have been cleared.

**This page left blank intentionally.**

## S-25.0 Job Tools

### S-25.2 Physical Exertion

Always use safe lifting practices when lifting, carrying or performing other tasks that might cause back pain, injury or property damage. Do not use excessive force to accomplish tasks. If one person cannot manually handle a load safely, then use mechanical assistance. Where mechanical assistance is not readily available, request assistance or stop and obtain the mechanical means necessary to complete the task.

#### S-25.2.1 Stretches

A listing of approved stretches is available on the BNSF Intranet. Stretching videos, posters and pocket cards are also available; instructions for ordering are on the BNSF Intranet.

Employees must only use BNSF approved stretches when stretching at the beginning of the shift, before physical exertion, after rest breaks, and after a long period of sitting or maintaining the same posture. Employees are to stretch without exceeding personal capabilities, but must participate to the extent of their ability or as directed by a physician. Stretches following rest breaks may consist of a subset of the approved stretches.

Check with your physician before beginning a new exercise program, or if you have had recent joint trouble, muscle problems, or surgery.

- Don't bounce.
- Keep the stretch mild and comfortable.
- Relax muscles as you stretch.
- BREATHE, don't hold your breath.
- Hold your stretch until tension releases, and then go further into another mild stretch.
- You should NEVER feel pain during or after a stretch.
- Stretch before you work, before any physical exertion and periodically to relieve muscle tension.
- A good rule of thumb is to stretch every 20 to 30 minutes.
- Don't forget to stretch both sides of the body when stretching.
- Tension for the initial stretch should release within 60 seconds. If it doesn't, reduce the intensity of the stretch slightly.

#### Benefits

- Increases range of motion, reducing risk of injury near joint limits.
- Warms muscles, reduces internal friction, and "resets" discs before activity.
- "Pre-fuels" muscles with oxygen before activity.
- Helps muscles relax and reduces soreness after activity.

#### Leading Stretches

Remind people that stretching is not a competition to see who can do the most or go the farthest. People have different levels of flexibility, and we need to respect these differences in ourselves, allowing each person to experience benefits at their own pace. It took your whole life to reach the level of flexibility (or inflexibility) you now have, so you should expect benefits to be gradual as you stretch regularly over time.

Remind people to check with their physician if they have particular problems with stretching, and to do only what they feel comfortable doing in the meantime.

**This page left blank intentionally.**

## **S-28.0 General Responsibilities**

### **S-28.1 Safety**

Safety is the most important element in performing duties. Obeying the rules is essential to job safety and continued employment.

#### **S-28.1.1 Maintaining a Safe Course**

In case of doubt or uncertainty, take the safe course.

#### **S-28.1.2 Alert and Attentive**

Employees must be careful to prevent injuring themselves or others. They must be alert and attentive when performing their duties and plan their work to avoid injury.

#### **S-28.1.3 Accidents, Injuries, and Defects**

Report by the first means of communication any accidents; personal injuries; defects in tracks, bridges, or signals; or any unusual condition that may affect the safe and efficient operation of the railroad. Where required, furnish a written report promptly after reporting the incident.

#### **S-28.1.4 Condition of Equipment and Tools**

Employees must check the condition of equipment and tools they use to perform their duties. Employees must not use defective equipment or tools until they are safe to use. Employees must report any defects to the proper authority.

#### **S-28.1.5 Inspection After Derailment**

After derailed equipment has been rerailed, employees must check the condition of the track to ensure that it is safe for the equipment to proceed.

### **S-28.2 Personal Injuries and Accidents**

#### **S-28.2.1 Care for Injured**

When passengers or employees are injured, do everything possible to care for them.

#### **S-28.2.2 Witnesses**

If equipment is involved in personal injury, loss of life, or damage to property, the employee in charge must immediately secure the names, addresses, and occupations of all persons involved, including all persons at the scene when the accident occurred and those that arrived soon after. The employee in charge must secure the names regardless of whether these persons admit knowing anything about the accident.

The employee in charge must also obtain the license numbers of nearby automobiles. When necessary, other employees can assist in obtaining this information, which must be included in reports covering the incident.

Where signaling devices are provided or a flagman is on duty, the employee in charge and assisting employees must try to determine who, among the witnesses, can testify whether the signaling devices were functioning properly or if the flagman was performing his duties properly.

When possible, obtain the names of witnesses who can testify about the bell and whistle signals.

### **S-28.2.3 Equipment Inspection**

If an accident results in personal injury or death, all tools, machinery, and other equipment involved, including the accident site, must be inspected promptly by the foreman, another person in charge of the work, or other competent inspectors. The inspector must promptly forward to his manager a report of the inspection. The report must include the condition of the equipment and the names of those making the inspection.

The person in charge must secure and maintain custody of the equipment involved, until the Claims Department is contacted and determines disposition.

### **S-28.2.4 Mechanical Inspection**

When engines, cars, or other equipment are involved in an accident that results in personal injury or death, the equipment must be inspected before it leaves the accident site.

A mechanical department employee must further inspect the equipment at the first terminal. This employee must promptly report inspection results to the proper manager.

### **S-28.2.5 Reporting**

#### **A. Injuries to Employees**

All cases of personal injury, while on duty or on company property, must be immediately reported to the proper manager and the prescribed form completed.

If after the initial report of an injury, employees seek medical attention for a work-related injury, they must contact the appropriate supervisor and update their status.

A personal injury that occurs while off duty that will in any way affect employee performance of duties must be reported to the proper manager as soon as possible. The injured employee must also complete the prescribed written form before returning to service.

#### **B. Injuries to Non-employees**

All injuries to non-employees (passengers, trespassers, etc.) on company property that do not result from an on-track equipment accident must be immediately reported to the proper manager and the prescribed form completed.

#### **C. Employees with Information Concerning Injuries**

Employees with information concerning an accident or injury to themselves, another employee, or a non-employee must immediately report the information to the proper manager and complete the prescribed form.

#### **D. On-Track Equipment Accidents**

All accidents (collisions, derailments, rail-highway grade crossing accidents, etc.) involving on-track equipment must be immediately reported to the proper manager and the prescribed form completed.

#### **E. Other Accidents Involving Damage or Loss**

All other accidents (theft, vandalism, company vehicle accidents, fires, etc.) involving damage or property loss that do not result from on-track equipment accidents must be immediately reported to the proper manager and the prescribed form completed.

### S-28.2.6 Statements

Except when authorized by the proper manager:

- Information concerning accidents or personal injuries that occur to persons other than employees may be given only to an authorized representative of the railroad or an officer of the law.
- Information about the facts concerning the injury or death of an employee may be given only to the injured employee, an immediate relative of the injured or deceased employee, an authorized representative of the railroad, or an officer of the law.
- Information in the files or in other privileged or confidential reports of the railroad concerning accidents or personal injuries may only be given only to an authorized representative of the railroad.

### S-28.2.7 Furnishing Information

Employees must not withhold information, or fail to give all the facts to those authorized to receive information regarding unusual events, accidents, personal injuries, or rule violations.

## S-28.3 Rules

### S-28.3.1 Rules, Regulations, and Instructions

**Safety Rules.** Employees must be familiar with and comply with all safety rules issued in a separate book or in another form, and have access to a current copy while on duty.

**General Code of Operating Rules.** Employees governed by these rules must have a current copy they can refer to while on duty.

**Hazardous Materials.** Employees who in any way handle hazardous materials must have a copy of the instructions or regulations for handling these materials. Employees must be familiar with and comply with these instructions or regulations.

**Air Brakes.** Employees whose duties are affected by air brake operation must have a copy of the rules and instructions for operating air brakes and train handling. Employees must know and obey these rules and instructions.

**Timetable/Special Instructions.** Employees whose duties are affected by the timetable/special instructions must have a current copy they can refer to while on duty.

**Train Dispatchers and Control Operators.** The train dispatchers and control operators must have a copy of the rules and instructions for train dispatchers and control operators. They must be familiar with and obey those rules and instructions.

**Classes.** Employees must be familiar with and obey all rules, regulations, and instructions and must attend required classes. They must pass the required examinations.

**Explanation.** Employees must ask their supervisor for an explanation of any rule, regulation, or instruction they are unsure of.

**Issued, Cancelled, or Modified.** Employee Safety Rules may be issued, cancelled or modified by General Order.

### S-28.3.2 General Orders and Notices

Rules may be issued, canceled, or modified by general order.

#### A. General Orders:

- Are numbered consecutively.
- Are issued and canceled by the designated manager.
- Contain only information and instructions related to rules or operating practices.
- Replace any rule, special instruction, or regulation that conflicts with the general order.

Employees governed by BNSF Employee Safety Rules must review general orders applicable to that document.

#### B. General Notices:

General Notices are issued and canceled by the designated manager. Employees and any others whose duties require must review notices applicable to their work location.

## S-28.4 Carrying Out Rules and Reporting Violations

Employees must cooperate and assist in carrying out the rules and instructions. They must promptly report any violations to the proper supervisor. They must also report any condition or practice that may threaten the safety of trains, passengers, or employees, and any misconduct or negligence that may affect the interest of the railroad.

## S-28.5 Drugs and Alcohol

The use or possession of alcoholic beverages while on duty or on company property is prohibited. Employees must not have any measurable alcohol in their breath or in their bodily fluids when reporting for duty, while on duty, or while on company property.

The use or possession of intoxicants, over-the-counter or prescription drugs, narcotics, controlled substances, or medication that may adversely affect safe performance is prohibited while on duty or on company property, except medication that is permitted by a medical practitioner and used as prescribed. Employees must not have any prohibited substances in their bodily fluids when reporting for duty, while on duty, or while on company property.

## S-28.6 Conduct

Employees must not be:

1. Careless of the safety of themselves or others,
2. Negligent,
3. Insubordinate,
4. Dishonest,
5. Immoral,
6. Quarrelsome,
- or
7. Discourteous.

Any act of hostility, misconduct, or willful disregard or negligence affecting the interest of the company or its employees is cause for dismissal and must be reported. Indifference to duty or to the performance of duty will not be tolerated.

**S-28.6.1 Suitable Language**

Employees on duty must refrain from using boisterous, profane, sexist, or vulgar language.

**S-28.6.2 Notification of Felony Convictions**

The conduct of any employee leading to conviction of any felony is prohibited. Any employee convicted of a felony must notify the proper authority of that fact within 48 hours after the employee receives notice of the conviction.

**S-28.7 Altercations**

Employees must not enter into altercations with each other, play practical jokes, or wrestle while on duty or on railroad property.

**S-28.8 Appearance**

Employees reporting for duty must be clean and neat. They must wear the prescribed uniform when required.

**S-28.9 Respect of Railroad Company**

Employees must behave in such a way that the railroad will not be criticized for their actions.

**S-28.10 Games, Reading, or Electronic Devices**

**While on duty, do not:**

- Play games or read magazines, newspapers or other literature not related to duties except when located in a predetermined place of safety during break periods and not performing duties.
- Use electronic devices (cellular telephones, notebook computers, laptops, ebooks, etc.) for other than business purposes except when located in a predetermined place of safety during break periods and not performing duties.
- Use cellular telephones or similar hand-held electronic devices for voice communications, emailing, performing any electronic text retrieval or entry, or accessing a web page when:
  - On the ground within four feet of the nearest rail of a track.
  - On, under or while involved with the operation or movement of equipment or machinery (e.g. cranes, loaders, forklifts, intermodal hostlers, etc.).

Exception:

Mechanical employees not involved with the operation or movement of equipment or machinery and within four feet of the nearest rail of a track may use cellular phones or similar hand-held electronic devices for business-related purposes when Blue Signal Protection is established on that track.

**While driving a BNSF owned or rented vehicle (off rail), do not:**

- Use cellular or mobile telephones, or similar hand-held electronic devices for voice communications in other than hands-free mode.
- Manually enter or read text from cellular or mobile telephones, or similar hand-held electronic devices (e.g. emailing, performing any electronic text retrieval or entry, accessing a web page, etc.).
- Dial or answer cellular or mobile telephones by pressing more than a single button when operating a commercial motor vehicle.
- Use notebook computers, laptops or similar devices. Display screen of such devices must be closed or off.

Employees must be aware of and comply with any local, state or federal laws governing use of wireless equipment while driving (e.g. laws banning use of wireless phone while driving).

**While occupying the control compartment of on-track equipment including hy-rails (on rail), do not:**

- Use cellular or mobile telephones, or similar hand-held electronic devices when the equipment is in motion.
- Use the instant messaging feature of Smart Mobile Client (SMC) when the equipment is in motion.

**While occupying the controlling cab of a moving train or engine:**

- Employees' and/or supervisors' cellular telephones must be turned off and ear pieces removed from the ear.

Exception - Cellular telephones may be used for mechanical or technical evaluations of locomotives or locomotive systems on a moving train; before using the device, a job safety briefing must be held with all assigned members of the train crew and all must agree how communications can safely take place.

- Cellular telephones may be used when the train or engine is stopped. Before using the device, a job safety briefing must be held with all assigned members of the train crew and all must agree how the use of the device can safely take place.
- Other electronic devices (not capable of voice communication) may be used only as duties require. Before using such device, a job safety briefing must be held with all assigned members of the train crew and all must agree how the use of the device can safely take place.

### **S-28.11 Sleeping**

Employees must not sleep while on duty. Employees reclined with their eyes closed will be in violation of this rule.

### **S-28.12 Weapons**

While on duty or on railroad property, employees must not have firearms or other deadly weapons, including knives with a blade longer than 3 inches. However, railroad police are authorized to possess firearms in the course of their work.

### **S-28.13 Reporting and Complying with Instructions**

Employees will report to and comply with instructions from supervisors who have the proper jurisdiction. Employees will comply with instructions issued by managers of various departments when the instructions apply to their duties.

### **S-28.14 Duty—Reporting or Absence**

Employees must report for duty at the designated time and place with the necessary equipment to perform their duties. They must spend their time on duty working only for the railroad. Employees must not leave their assignment, exchange duties, or allow others to fill their assignment without proper authority.

Employees must not be absent from duty without proper authority. Except for a scheduled vacation period, authorized absence in excess of ten calendar days must be authorized by formal leave of absence, unless current agreement differs.

### **S-28.15 Subject to Call**

Employees subject to call must indicate where they can be reached and must not be absent from their calling place without notifying those required to call them.

## S-28.16 Hours of Service Law

Employees must be familiar and comply with the requirements of the federal hours of service law. Employees are expected to use off-duty time so they are prepared for work.

If an employee is called to report for duty before legal off-duty time has expired, before accepting the call to work, the employee must notify the individual making the call that off-duty time has not expired.

### A. Notification

When communication is available, employees must notify the train dispatcher or another authority of the time the law requires them to be off duty. Employees must provide notification early enough that they may be relieved, or transportation provided, before they exceed the hours of service.

### B. Exceeding the Law

Employees must not exceed the hours of service law without proper authority. However, they must not leave trains, engines, or cars on the main track without proper protection. Employees must secure trains properly and, if possible, before they exceed the hours of service. Except as provided by this paragraph, employees are then relieved of all duties.

## S-28.17 Unauthorized Employment

Employees must not engage in another business or occupation that would create a conflict of interest with their employment on the railroad or would interfere with their availability for service or the proper performance of their duties.

## S-28.18 Care of Property

Employees are responsible for properly using and caring for railroad property. Employees must return the property when the proper authority requests them to do so. Employees must not use railroad property for their personal use.

### S-28.18.1 Company Vehicles

Drivers of company vehicles must:

- Unless authorized, must not use company vehicles for personal business or for commuting to or from a personal residence.
- Not install or carry radio receivers or other accessories or appliances in the company vehicle without the proper authority.

## S-28.20 Occupying Roof

Employees whose duties require them to occupy the roof of a car or engine must do so only with proper authority and when the equipment is standing.

## S-28.21 Not Permitted on Equipment

Unauthorized persons must not be permitted on equipment.

### S-28.21.1 Unauthorized People

When an employee sees someone who should not be on BNSF property, the employee should notify the railroad police or railroad supervisor.

## S-28.22 Altering Equipment

Without proper authority, employees must not alter, nullify, change the design of, or in any manner restrict or interfere with the normal function of any device or equipment on engines, cars, or other railroad property, except in the case of an emergency. Employees must report to the proper supervisor changes made in an emergency.

## **S-28.23 Clean Property**

Railroad property must be kept in a clean, orderly, and safe condition. Railroad buildings, facilities, or equipment must not be damaged or defaced. Only information authorized by the proper manager or required by law may be posted on railroad property.

### **S-28.23.1 Avoid Littering**

Do not throw articles from any of the following:

- Locomotives.
- Cars.
- Moving equipment.
- Company motor vehicles.
- Doors and windows of buildings.

## **S-28.24 Credit or Property**

Unless specifically authorized, employees must not use the railroad's credit and must not receive or pay out money on the railroad account. Employees must not sell or in any way get rid of railroad property without proper authority. Employees must care for all articles of value found on railroad property and promptly report the articles to the proper authority.

### **S-28.24.1 Proper Use of Postage**

Employees may not use company postage for personal mail.

## **S-28.25 Gratuities**

Employees must not discriminate among railroad customers. Employees must not accept gifts or rewards from customers, suppliers, or contractors of the railroad unless authorized by the proper manager.

## **S-28.26 Divulging Information**

Employees who make up, handle, or care for any of the following must not allow an unauthorized person to access them or disclose any information contained in them:

- Correspondence.
- Reports.
- Books.
- Bills of Lading.
- Waybills.
- Tickets.
- Statistics.
- Electronic mail.
- Any document marked as "Confidential."

Employees are to ensure that data on the company's financial performance and documentation supporting transactions are kept confidential.

### **S-28.26.1 Requirements for Disclosing Company Information**

#### **A. Definition of Company Information**

Company information consists of all information concerning the company and its employees, customers and suppliers.

#### **B. Proper Disclosure**

Company information belongs solely to the company and is considered confidential. Employees may disclose company information externally only for legitimate business purposes and only if the supervisor approves. Employees must use the normal authorization channels to disclose company business.

Without proper authorization, employees must not:

- Access, use, retain, modify, or distribute company information.
- Use company computing and telecommunications equipment.

Unauthorized users of company equipment or information may receive disciplinary or legal action.

### **S-28.26.2 Monitoring of Company Information**

Without notifying the user, BNSF may at any time monitor or record access to company information or computing and telecommunications equipment.

Any information electronically collected, stored, processed, or transmitted on company computing and telecommunications equipment is the property of BNSF. BNSF may at any time monitor or record such information on BNSF equipment.

## **S-28.61 Encroachment**

Encroachment on railroad property, including building occupancy or the unauthorized dumping or storage of material, is prohibited.

When observing outside parties performing work that may encroach on the right of way, report the location and the nature of work to the proper authority.

### **S-28.61.1 Authorized on Railroad Property**

Persons must be authorized to be on railroad property, which includes:

- Buildings.
- Facilities.
- Repair tracks.
- Team tracks.
- Other railroad property.

Persons authorized to be on railroad property must wear protective equipment where required.

## **S-28.62 Legal Summons**

### **A. Requirement to Report Summons to Proper Authority**

If an employee receives a summons, complaint, or any other legal papers that references the business of BNSF Railway or any of its subsidiaries, that person must immediately contact all of the following:

- The appropriate General Claims Department Manager for the area where the action originated.
- Vice-President Law.

### **B. Contents of Report**

When contacting the above individuals, the person who received the legal papers must:

1. Submit a written report with the following information:
  - Names of people involved in the action.
  - Court where the action is filed.
  - Brief statement of the case, when possible.
2. Mail the legal papers immediately to the Law Department and include his or her name, title, and date and time of service.

## Glossary

### Acknowledge

Verbally or visually make known that a signal or radio transmission has been received.

### Air Brake Hose

The flexible connection between the brake pipes of cars or locomotives.

### All-Terrain Vehicle (ATV)

A four-wheel vehicle with handle bars and a seat that is straddled by the operator.

### Angle Cock

A two-position valve located at both ends of the brake pipe hose on locomotives, passenger and freight cars. When open, it allows the passage of air.

### Authorized

A person who is approved or assigned by BNSF to perform a specific type of duty or duties or to be at a specific location(s) at the job site.

### Bad Order

Equipment that is removed from service and in need of repair.

### Below-the-Hook Lifting Device

A structural, mechanical, vacuum or magnetic device designed to lift a load when attached to the load hook of a crane or hoist.

### Blocking

A solid piece(s) of material, usually made of wood used to provide support to a suspended load placed to prevent the load from falling.

### Bonding

A wire connecting two pieces of equipment that prevents a build-up of a static charge by creating the same electrical potential between the two pieces of equipment.

### Brush Hook

A hand tool with a curved blade resembling an axe used to clear brush.

### Capacity

The allowable load limit for any lifting or storing device as determined by the manufacturer, regulation, or both.

### Center Sill

The center longitudinal part of the underframe of a car which forms the backbone of the underframe and transmits most of the buffing shocks from one end of the car to the other.

### Chip Guarding

A cone shaped device used on air guns to prevent the operator from being struck by chips or debris while using an air gun.

### Chock

A device placed on the rail to prevent movement of stationary rolling equipment.

### Confined Space

A space that meets all of the following criteria: large enough and so configured that an employee can bodily enter and perform assigned work; has limited or restricted means for entry or exit; is not designed or intended for continuous occupancy by personnel.

### Coupler

An appliance for connecting cars or locomotives.

### Coupler Webbing

The side pocket on a coupler that the end of train device mounts into.

### Crossover

A track connection between two adjacent tracks, consisting of two switches, which is intended to be used primarily for the purpose of crossing over from one track to the other.

### Derail

A track safety device designed to guide a car off the rails at a selected spot as a means of protection against collisions or other accidents; commonly used on spurs or sidings to prevent cars from fouling the main track.

### End-of-Train Telemetry Device (ETD)

A system of components that determines the rear car brake pipe pressure and transmits that information to the display on the head-of-train telemetry device (HTD).

### Fall Protection

Safety equipment designed to prevent falls and minimize injury in the case of falls.

### Flashback Arrestor

A device most commonly used in oxy-fuel welding and cutting to stop the flame from burning back up into the equipment and causing damage or explosions.

### Fouling Track

Closer than or within four feet of the nearest rail.

### Frog

A track structure used at the intersection of two running rails to provide support for wheels and passageways for their flanges, thus permitting wheels on either rail to cross to the other.

### Fusee

A red flare used for flagging purposes.

### Ground Fault Circuit Interrupter (GFCI)

A device designed to protect from electrical shock by interrupting a circuit when there is a difference in the currents in the "hot" and neutral wires.

**Grounding**

The connecting of electrical equipment and wiring systems to the earth by a wire or other conductor.

**Hand Brake**

An assortment of levers, chains, rods, and gears. When applied manually by wheel or lever, the hand brake forces the brake shoes against the braking surfaces (wheel tread or disc) to control car or locomotive movement.

**Hazardous Material**

A substance or material which is capable of posing an unreasonable risk to health, safety, and the environment.

**Knuckle**

The pivoting casting that fits into the head of a coupler to engage a mating coupler.

**Leading foot**

When riding on the side of moving equipment, the foot on same side as direction of movement.

**Lining Bar**

A crowbar with a pinch, wedge, or diamond point at its working end.

**Lockout/Tagout (LOTO)**

Procedures that involve tagging and locking systems so that no one can inadvertently activate the circuit, system, or equipment that is out of service.

**Operator**

The person who “runs” and so must maintain control of mechanized equipment or a motor vehicle.

**Pawl**

A pivoted tongue or sliding bolt on one part of a machine that is adapted to fall into notches or interdental spaces on another part so as to permit motion in only one direction.

**Pinch Bar**

A bar similar in form and use to a crowbar and sometimes having an end adapted for pulling spikes or inserting under a heavy wheel that is to be rolled.

**Pry Bar**

A tool consisting of a metal bar with a single curved end and flattened points, often with a small fissure on one or both ends for removing nails. Also referred to as a crow bar.

**Proper Authority**

Those individuals who are qualified by virtue of their expertise or position to approve, certify, sanction or provide/receive information.

**Qualified**

Any person by possession of a recognized degree, certificate, professional standing or training and has successfully demonstrated their ability to perform a task or resolve problems relating to the subject matter.

**Reverse Flow Check Valve**

The main function of the check valve is to close when forward flow of gas or material stops and prevents the development of reverse flow purpose.

**SCFH**

Standard Cubic Feet per Hour - the cubic feet per hour of gas flow at specified standard conditions of temperature and pressure.

**Skate**

A metal skid placed on the rail to stop the movement of rolling equipment.

**Sledge Hammer (Mundy)**

A long-handled hammer with a double-faced head used to strike other tools such as a track chisel and a rail drift pin and to install or remove rail anchors.

**Stage Boards**

Boards, planks or batten on a scaffold that are used as a work platform.

**Three-point Contact**

Three-point contact is used when getting on or off vehicles, equipment, and machinery, and when ascending or descending ladders or platforms. Three-point contact consists of a minimum of both feet and one hand or both hands and one foot.

**Trailing Foot**

When riding on the side of moving equipment, the foot on the opposite side from the direction of movement.

**Utility Vehicle**

Also called a “Side by Side”, is a small four wheel off-road vehicle capable of accommodating multiple passengers.

**Working Load Limit**

The maximum load that includes mass or force, that should ever be applied to load carrying equipment under any condition.
